How Easy to Use?

Paradox 2.0, the top-rated Network, 386, and

Paradox® is both the first family in DBMS and the top-rated relational database. Software Digest has ranked Paradox #1 for the past 2 years; PC Magazine gave Paradox its "Editor's Choice" award and InfoWorld named it 1987 "Product of the Year" for Database Systems.

Now there's OS/2

Paradox OS/2 is the newest member of the Paradox family—more are on the way and they're all 100% compatible with each other.

Paradox OS/2 allows you to take advantage of powerful OS/2 features such as addressing up to 16 megabytes of memory and running concurrent sessions. And Paradox OS/2 even lets you start new OS/2 sessions from within Paradox.

*Customer satisfaction is our main concern; if within 60 days of purchase this product does not perform in accordance with our claims, call our customer service department, and we will arrange a refund.

All Borland products are trademarks or registered trademarks of Borland International, Inc. Other brand and product names are trademarks of their respective holders. Copyright ©1988 Borland International, Inc. BI 1228

Harness the power of 386

Paradox 386 is powerful new DOS software for your powerful new hardware and it's designed exclusively for 80386-based systems. It also lets you ignore the old 640K limits and races through your data 32 bits at a time instead of just 16. It's a perfect solution for anyone faced with very large tables (tens of thousands of records or more) and/or large applications.

“As proof of Borland's commitment to delivering compatibility across diverse hardware and software environments, Paradox 386 and Paradox 2.0 can share the same databases and applications on a network.

Giovanni Perrone, PC Week

Paradox . . . it's the PC database-management system equivalent to turbo-charging an M-series BMW.

Giovanni Perrone, PC WEEK ”

The Paradox Network really works

Network users, you need Paradox's multiuser capabilities. The network runs smoothly, intelligently and so transparently that multiusers can access the same data at the same time—without getting in each other's way. (But safeguards prevent multiple users from altering the same data at the same time.) And with screen refresh you get real-time data updates on your screen.

“[Paradox is] a true network application, a program that can actually take advantage of a network to provide more features and functions, things that can't be done with a standalone PC.

Aaron Brenner, LAN Magazine

[Paradox] elegantly handles all the chores of a multiuser database system with little or no effort by network users.

*Mark Cook and Steve King
Data Based Advisor* ”

relational database, has now OS/2 versions!

“Query-by-Example” gives you the right answer, right now

Our “Query-by-Example” (QBE) technique is just one illustration of the technological leadership offered by Paradox for the past 2 years.

QBE is fast and simple to use. Simply call up a form and check off the information you want.

[F6] to include a field in the ANSWER; [F5] to give an Example

SALES		Stock	Customer	Init	Street

PRODUCTS		Stock	Description	Price	Quant

ANSWER	Customer	Init	Description	Price
1	Chevalier	R	Hink handkerchiefs (13)	12,995.00
2	Elspey, III	R	Robot-valet	149,995.00
3	Fahd	R	Hatching panthers	375,000.00
4	Hanover	R	Digital grandfather clock	4,995.00
5	Hanover	R	Robot-valet	149,995.00
6	Mattheus	R	Robot-valet	149,995.00
7	Mattheus	R	Stretch All Beetle	38,495.00
8	Nayer	R	Robot-valet	149,995.00
9	Ranier	R	Hink handkerchiefs (13)	12,995.00
10	Ranier	R	Robot-valet	149,995.00

Without having to write a line of code, you can, for example, get answers to queries like: *Find all the items we sold for more than \$1000 and tell me who ordered them.*

An artificial intelligence technique called “heuristic query

optimization” gives Paradox’s QBE the ability to figure out not just the right answer, but also the fastest way to get the right answer.

QBE makes high-speed links between one piece of data and another and quickly sees the relationships your question calls for.

PAL:™ A powerful programming language

PAL, the Paradox Application Language, is a full-featured, high-level, structured database programming language that lets you write sophisticated Paradox programs (scripts) and applications. It includes such powerful features as looping constructs, arrays, branching, procedures, and a full set of functions.

“Most people we meet who give Paradox a try, end up switching to it . . .

Mark Cook and Steve King
Data Based Advisor”

There’s a Paradox 2.0 version for you

Whether you’re a DOS or OS/2 user, there’s a Paradox version for you.

IDG Communications publishes over 80 computer publications in more than 28 major countries. Fourteen million people read one or more IDG Communications publications each month. IDG Communications publications contribute to the *IDG News Service* offering the latest on domestic and international computer news.

HOW TO CONTACT PC WORLD

Comments, criticism, suggestions, and complaints are always welcome. Send correspondence to *PC World*, Editorial Dept., 501 Second St., San Francisco, CA 94107. You can reach us electronically via MCI Mail PCWORLD/179-3813, CompuServe 74055,412, The Source STE908, or facsimile at 415/442-1891.

Subscription Services If you have subscriber service questions, call toll-free 800/525-0643 (303/447-9330 in Colorado) or write Subscriber Services, P.O. Box 55029, Boulder, CO 80322-5029. To place new orders call 800/642-9606.

Help With Your Computer or Software Do you have any questions about the IBM PC or compatibles? Send them to *The Help Screen*, *PC World*, 501 Second St., San Francisco, CA 94107, or electronically to MCI Mail Karl Koessel/336-4141, CompuServe 74055,412, or The Source STE908. Questions with the broadest interest will be answered in the magazine. Sorry—we can't acknowledge individual letters or offer advice over the phone.

Product Information We're always interested in new products for our news and review sections. Send press releases and product announcements to Rex Farrance, assistant editor (software), or Janet Walden, assistant editor (hardware), at *PC World*, 501 Second St., San Francisco, CA 94107, or electronically to MCI Mail PCWORLD/179-3813, CompuServe 74055,412, or The Source STE908.

Editorial Calendars To receive a copy of *PC World's* Editorial Calendar, call your nearest regional *PC World* advertising sales and marketing office; a complete list of phone numbers appears opposite the "Advertisers Index."

Reprints and Permissions You must have our permission before reproducing any material from *PC World*. If you want to quote from or reprint any portion of an article or use artwork or photographs that have appeared in the magazine, send a written request to *PC World*, Reprints and Permissions, 501 Second St., San Francisco, CA 94107. Include your phone number if you need a fast response.

Writing for PC World *PC World* encourages reader submissions. For a copy of our writers' guidelines, send a self-addressed stamped envelope to the address given below. Manuscripts may be mailed, or sent electronically.

Letters. Letters should be mailed to the address given below, *c/o Letters*. All letters must include the writer's name, city, and state. They should not exceed one double-spaced typewritten page. We reserve the right to edit letters.

Star-Dot-Star. We pay \$25 to \$200 for each item published in *Star-Dot-Star*. Send your PC discoveries to the address given below, *c/o Star-Dot-Star*. All published submissions become the property of *PC World* and are subject to editing for length and style. Due to the volume of mail, we cannot acknowledge any submitted materials. Accepted contributions will be acknowledged by payment.

The Upgrade Path. Manufacturers offering hardware upgrade products, and readers with submissions or queries, should write to *The Upgrade Path* at the address given below.

Power Tips. Have you discovered a timesaving technique for increasing PC productivity? Share it with other readers. Send your tips to the address given below, *t/o Power Tips*. Keep submissions to 100 words or less; we'll pay \$25 for each tip published.

Consumer Watch. Think you've gotten a raw deal? Send the details to *Consumer Watch* at the address given below. We'll investigate your complaint; letters with the broadest interest will be published.

General Questions About PC World

If you wish to submit material for any of the departments mentioned above, or if you have any questions, contact *PC World*, 501 Second St., San Francisco, CA 94107; 415/243-0500, MCI Mail PCWORLD/179-3813, CompuServe 74055,412, or The Source STE908.

A Taste for Accounting

Ralph Soucie applied his accountant's wiles to this month's Buyers' Guide.

For most of us, dealing with financial matters ranks on a par with going to the dentist or getting a speeding ticket. Contributing Editor Ralph Soucie understands. In 11 years as an accountant (the last 8 as a CPA), he's helped hundreds of small and medium-size businesses get their finances in order.

Since 1983, Soucie has earned a reputation as *PC World's* expert on spreadsheets and accounting applications. This month, he prepared our buyers' guide to vertical accounting packages, "Accounting Tools of the Trades."

"Most businesspeople have little patience for dealing with the details of accounting," Soucie says. "I try to make the process go a little smoother, but I can never totally relieve my clients of the record-keeping burden. That's where the right software is invaluable."

What makes vertical applications different? "General accounting software is designed for the back office—the general ledger, payables, and receivables," Soucie explains, "while vertical software takes into account how an individual business runs. A medical application, for example, might let you prepare an invoice before the patient leaves the office, which means you have a better chance of getting paid."

JOHN MAHER

What happens if you choose the wrong package? "A lot of money just disappears. A vertical package is a risky investment, because its tentacles extend into every aspect of your business. But the potential payoffs are so great, it's worth taking a chance."

The more information you have, the more likely you are to make the right product choice. That's why *PC World* provides reader service cards: Using the postage-paid cards, you can request product information directly from a manufacturer. Beginning this month, we've made it easier for you to find reader service numbers by printing them at the end of every "Product Outlook" item, every review, every buyers' guide listing—everywhere you're likely to find a product lead worth pursuing.

Also in this issue: We review software that helps you find a word or phrase on a crowded hard disk ("In Search of Forgotten Text"), tackle the big jobs ("Project Management—for Professionals Only"), run half a dozen DOS applications at the same time ("Multitasking Without OS/2"), or improve communications on your local area network ("LAN E-Mail: Power to the Work Group"). And check out our Feature section, where East Coast Editor Eric Bender offers an early glimpse of OS/2 Extended Edition and an update on Lotus's *Notes* and other groupware packages. ●

CORPORATE ART.

ANOTHER CAREER OPPORTUNITY FOR PCs WITHOUT OUR 386 MOTHERBOARD.™

With Our MotherBoard, Your PC, XT or AT Can Run New OS/2 Releases! If you'd rather keep your computer in the trenches than on a pedestal, get our 386 MotherBoard. Our Board will give your spreadsheet, complex CAD and graphics, and multitasking applications a boost to boast about. In fact, our line of MotherBoards accelerate your PC, PC/XT or PC/AT to speeds equal to the IBM PS2 Model 80. And faster. Because we've built in 1 Megabyte of high speed RAM and a 387 math coprocessor socket.

Accelerator Cards Have No Future. An accelerator card can only turn an obsolete computer into a faster obsolete computer. Our MotherBoards advance your computer into a new 386 system! They run OS/2, Windows/386, UNIX V and PC-MOS/386. For more power, you'll find 16-bit expansion slots that accommodate the latest I/O expansion cards. **Only our 386 MotherBoards give your PCs an unlimited future!**

The Critics Applaud! *PC Magazine* awarded our Board "The Editor's Choice" for 386 Replacement Boards. *PC World* called it "the Upgrade Product of the Year."

Technical Features ■ 16 MHz 80386 ■ 1 Megabyte of 100 nsec 4-way interleaved RAM ■ PC/AT compatible I/O and BIOS for support of OS/2 ■ Six 8-bit expansion slots ■ two 16-bit expansion slots; four on 386 MotherBoard/AT ■ One 32-bit expansion slot for up to 12 Megabytes of high speed memory ■ Battery-powered clock/calendar.

386 MotherBoard for the PC or PC/XT	\$1695
386 MotherBoard for the PC/AT	\$1795
386 MotherBoard/20 MHz for PC/AT	\$2195
32-bit RAM Board (2 Mbyte installed; up to 10 Mbytes)	\$1195
16 MHz 80387 math coprocessor	\$695
16-bit combination hard disk/floppy disk controller	\$245

Prices subject to change.

Power users like you will find our easy-to-install MotherBoards to be true works of art. For more information, call: **1 (800) 443-6284**. In New York: **(516) 434-1600**. All our products are available at your local computer dealer!

Acer
910
&
710

We Got Big By Thinking Small.

◆ At Acer, we focus on the little things that make a big difference. Our customers needed PCs that delivered maximum power in minimal space, so we created the Acer 910 and Acer 710. Offering big PC power and speed in a computer 40% smaller than comparable systems.

◆ Like all Acer systems, the 910 and 710 have been designed with attention to detail. Little things like placing power and reset buttons in front. And designing an AT standard keyboard with the finest tactile touch.

◆ It is this painstaking attention to detail that has allowed Acer to grow 100% a year, for the past 10 years. We're also big on delivering quality products at an affordable price.

◆ Take the Acer 910 for example. This 286-based PC is 25% faster than IBM's PC/AT. Offering one megabyte of on board expandability, full multitasking capabilities

and six expansion slots. The Acer 910 is designed to handle even the most advanced business tasks. From complex spreadsheets, and financial applications to large data bases. All for a small price that allows you to maximize your return on investment.

◆ And if you're thinking smaller, think about the Acer 710. Sleek and economical, the 710 runs twice as fast as IBM's PC/XT. And with both 10 and 4.77 MHz operating speeds, your Acer 710 can run a full range of popular software programs. Making

it ideal for word processing and other routine applications.

◆ As with all Acer systems, the 910 and 710 are serviced and supported on-site by TRW nationwide.

◆ To find out how our reduced footprint systems can give you big performance at an affordable price, give us a call at (800) 538-1542. In California, call (800) 782-1155.

What you've been doing.

*On your 286,
you've been making any task look complicated.*

*On your 386,
it hasn't been incredibly exciting having all that power.*

If the screens on the right look more intriguing to you than those on the left, you're ready for Microsoft® Windows.

Windows opens up the world of visual thinking to all 286 and 386 owners by offering the power of graphics.

Everything you can do on your PC, you can now do better, faster and with greater imagination. Whether you're creating documents or trying to get a clearer picture of your work.

What used to take complicated key-strokes can now be accomplished with the simple click of a mouse. With Microsoft Windows, you access pull-down menus. Simultaneously work with different programs as well as cut and paste between them to create graphic examples within different bodies of text. And what you see on the screen will appear on your printed page.

And once you've learned Microsoft Windows, you'll have the basis for scores of other programs because all the countless new Windows applications are based on the same easy, logical format.

Since Microsoft Windows virtually looks and works like MS® OS/2 Presentation Manager, you won't have to worry about it becoming obsolete in a couple years. We made both systems compatible. So, in the future, you'll be able to share

*Stop playing with
ancient instruments.
Now cutting and pasting is
a simple point and click
with the Microsoft Mouse.*

data between them. And your knowledge of Windows will give you a jump on learning MS OS/2 Presentation Manager.

You'd expect a program this powerful to require a more powerful machine. But we consistently create software that makes

What you could have been doing.

*With Windows/286,
you could have been seeing things much more clearly.*

*With Windows/386,
you could have been seeing a lot more things much more clearly.*

the best use of your present hardware.

For example, Microsoft Windows/286 will work with as little as 640K and instantly make your machine more sensitive, intuitive and highly visual. It gives you the ability to run every Windows application available.

And with access to all those powerful programs, you'll be able to extend the life and usefulness of your 286 well beyond the introduction of MS OS/2 Presentation Manager. With version 2.1 you also get the benefit of increased speed. So you'll blaze through Windows applications up to 87% faster.

Microsoft Windows/386 will give you everything that Windows/286 gives you. Plus multitasking with most DOS applications. Now you can finally utilize the speed and power of any 386 machine.

Imagine creating a complicated spreadsheet. Then while a macro is being run, open up a word processor. Type a document, open and work with a graphics program. Cut and paste between programs and even call up electronic mail. And still be able to check on the status of your spreadsheet at any time.

Considering all you can do with Microsoft Windows, you have only one question to ask yourself.

What have you been doing without it?

Microsoft®

SQL Top Gun School

\$199

All the database Top Guns are flying SQL, the industry-standard data management language first delivered by Oracle. Why? Because one SQL statement replaces up to 20 lines of dBASE code. And because all the powerful multi-user and distributed databases use SQL — exclusively.

Now you can turn your PC into a SQL trainer that will make you a database top gun: Introducing SQL*Tutor from Oracle, only \$199.

Become an instant SQL ace.

After using SQL*Tutor, you'll be able to:

- Construct simple and complex queries
- Create tables, views and indexes
- Manipulate information in data tables
- Create reports
- Use ORACLE's powerful SQL extensions

Or if you're already sold on SQL, then order Professional ORACLE today for \$1295,* and get SQL*Tutor free.

According to PC Week, Professional ORACLE is "the most versatile database management system available on the PC." It includes the ORACLE

SQL database engine, utilities and Oracle's 4th-generation application development tools.

Professional ORACLE is network-ready, and is the same ORACLE that

runs on minis and mainframes. Use it as your standard PC workgroup database, and to provide connectivity to corporate data.

Call 1-800-ORACLE1, ext. 4609 today. Or fill out and AIR MAIL the attached coupon. So your squadron can fly the latest database technology into the 1990s.

Dear ORACLE...

P.O. Marketing • 20 Davis Drive

TOP OF THE NEWS

Cloners Challenge IBM

Vendors of Compatibles Band Together to Support a Bus That Compares With MCA

In a widespread revolt, dozens of system and peripherals vendors have pledged support for a new bus design that they claim offers the same functionality as IBM's much-touted Micro Channel Architecture (MCA). A nine-member core group spearheaded by Compaq Computer has proposed a bus specification challenging IBM's attempts to move customers from the AT-style input/output standard to its proprietary Micro Channel. The rebel group's specification extends AT compatibility, providing 32-bit data paths for add-on boards and peripherals, and arbitrates conflicts among multiple intelligent devices such as disk controllers and network cards. The key element in the compatible makers' strategy is that unlike MCA, the Extended Industry Standard Architecture (EISA) won't sacrifice compatibility with existing peripherals to get these benefits. EISA-equipped systems

are not expected to ship until year-end 1989, when Intel Corporation will offer a supporting chipset. A typical EISA configuration is likely to expand upon the dual-bus architecture commonly found in 80386 computers today. One bus will provide direct links between 32-bit memory and the central processor, while the I/O bus will manage the system requests of today's AT-style peripherals and an upcoming crop of 32-bit I/O devices. IBM, which was invited to join the consortium but declined, claims it deserves royalty payments for patents held on the AT bus. Compaq president Rod Canion maintains that EISA's design raises no new legal issues. In the face of the EISA challenge, IBM executives reaffirmed the company's commitment to the Micro Channel and contended that the new specification only validates their 18-month-old claim that the AT bus has run out of gas.

Model 30 286 Released

New CPU Raises Questions About IBM's Support of Micro Channel

Apparently softening its determination to eradicate advanced systems with AT-style bus architecture, IBM has introduced an 80286-based Model 30 PS/2 based on just such an architecture. IBM abruptly stopped shipping its best-selling PC AT in the summer of 1987 in order to move advanced system buyers up to PS/2 models equipped with the Micro Channel. Industry analysts cite that action as the reason for IBM's loss of market share to competitors' PCs equipped with AT-style bus architectures. Perhaps indicating IBM's ambiva-

lence on the subject or its desire to protect sales of MCA-equipped 286-based designs, the Model 30 286 joins the hotly contested 286 race somewhat handicapped. Its base configuration includes a 10-MHz one-wait-state processor, a mere 512K of memory, three 8/16-bit slots, and a single 3½-inch floppy for \$1995. An optional 20MB hard drive offers only an average access time of 80ms. Citing past promises to upgrade the Model 30, IBM president William Lowe insisted, "We are not abandoning the Micro Channel."

LaserJet Upgraded

State-of-the-Art Paper Handling Available, but Not PostScript

The Hewlett-Packard LaserJet family is likely to acquire PostScript printing someday soon, but that capability is conspicuously absent from the newest release of the printer. Instead, declaring that it wants to set a new paper-handling standard, HP has launched the LaserJet IID with three much-requested capabilities. Equipped with the Canon SXD engine, the LaserJet IID gains a second 200-sheet paper-feeding bin, the ability to print on both sides of the paper from either or both bins, and a separate 50-unit envelope-feeding option. HP grabbed early market leadership in March 1984, introducing a \$3495 LaserJet eight months before Apple launched its \$7000 LaserWriter. While Apple has emphasized desktop publishing, HP has positioned the LaserJet as an economical

general office printer. That meant passing up PostScript licensing, which Product Marketing Manager Cathy Lyons says would boost the IID's price from \$4229 to around \$6000. HP and PostScript developer Adobe Systems have been discussing the issue for years, she adds, and PostScript is likely to appear as an upgrade option sometime in the near future. The LaserJet IID also lacks the video I/O port that QMS's JetScript PC board uses to send PostScript files to the Series II. Lyons wouldn't say why HP felt compelled to eliminate this port, the most popular way of adding PostScript to the LaserJet, but added that "HP is looking at another solution that will let more than one user share the capability."

Ashton-Tate Releases Compiler, Translator

*Seeks to Bring
Fallen-Away
Developers
Back to Its
Language*

Moving to stem competitors' inroads into its *dBASE* franchise and bring errant developers back into the fold, Ashton-Tate has introduced both a dialect translator and a full native-mode compiler for *dBASE IV*. *dBASE Professional Compiler*, which will be included free in a first-quarter 1989 update of *dBASE IV Developer's Edition*, compiles applications to executable binary code. The unmodifiable applications can then be distributed to an unlimited number of users, none of whom need a copy of *dBASE IV*. Before year-end, Ashton-Tate also will ship *STEP IVWard*, an \$89.95 translator of applications in the *Clipper*, *Foxbase*, and *Quicksilver* dialects into *dBASE IV*. The \$1295 *dBASE IV Developer's Edition* version 1.0

and the \$795 *dBASE IV*, both of which began shipping September 30, already include an interpreted compiler which produces hexadecimal code and still requires the base program to run. The two compilers have complementary attributes. *dBASE Professional Compiler* was designed by former Ashton-Tate programmer Jeff Cooper, now of Apex Software, who began work on a similar product in 1983. Fear of losing *dBASE* sales prevented Ashton-Tate from releasing it, admits President Ed Esber. Since then, however, competitors have shipped between 100,000 and 180,000 compilers and an untold number of *dBASE* clones. Esber says that Ashton-Tate now recognizes that it can tap the compiler market without hurting *dBASE* sales.

Compaq Shifts Emphasis

*Profiles Get
Smaller,
Prices
Cheaper*

Compaq's recent introductions of a long-awaited laptop and a new small-footprint desktop computer (see the Compaq preview in this issue) represent not only new technology but also a tilt in the balance of the Compaq line toward downsized, more affordable computers. The new Deskpro 386/20E, a 20-MHz 80386 computer, has the same 15-by-16-inch footprint of Compaq's 80386SX-equipped boxes introduced in August. Both save slots and inches by putting serial ports, parallel ports, and graphics and disk controllers on their motherboards. Because of these products, Compaq has decided to discontinue the large form-factor Deskpro 386 and Deskpro 386/20, offering the 386S and 386/20E for about \$1500 less, respectively, than the larger machines. The Deskpro 386/25 will maintain

its larger footprint for customers whose applications require more slots and more internal storage. Meanwhile, Compaq's new 12-MHz 286-based SLT 286 may be the first laptop that does double duty as a small desktop without compromising functionality. Attacking the problems common with portables—poor display and limited expandability—the SLT 286 sports a VGA-compatible LCD screen and optional desktop subsystems for additional drives and expansion boards. Vice President Mike Swavely says Compaq decided to use a 286 processor and sell the accompanying desktop subsystems separately in order to keep the weight under 14 pounds, hold the price under \$5500, and reach "the mainstream."

Introducing Xerox Presents

*Desktop Pre-
sentation Tool
Is First to Mi-
grate From
the Mac*

Xerox began shipping the first of several products resulting from agreements with leading Macintosh graphics provider Cricket Software. *Xerox Presents* is billed as a full-feature graphics system for business presentations. While Technical Manager Walter Schwartz maintains that the product provides full-feature drawing, chart-building, and word processing modules, he adds that the principal added value in *Xerox Presents* is its ability to simplify the organization and management of visual materials such as 35mm slides. The package can create sophisticated slide shows on a PC, and by

taking advantage of the multifile and clipboard capability of *Microsoft Windows*, *Xerox Presents* lets the user create fresh presentations by combining parts of others. The program can import ASCII text, data from most spreadsheets including 1-2-3, and graphics files in various formats, including TIFF, PCX, and EPS. Since few presenters have graphic arts backgrounds, *Xerox Presents* ships with more than 200 customizable style sheets that offer professional advice on choosing fonts, colors, and layouts.

Reaching For the Right Balance

A Balance of Software for your IBM® PC or compatible

BIG BLUE DISK is one 3 1/2" disk or two 5 1/4" disks full of quality software for your personal computer, delivered to your door every month for only \$6.65 an issue. BIG BLUE DISK gives you just the right balance of useful applications for home or work as well as entertaining games and features. Each month you'll receive from five to ten quality, original programs (not public domain) depending on the size of each program.

Get the Most from Your PC

Every month, you can rely on the vast experience of our editors and programmers to provide you with carefully selected software **you can use**. Each monthly issue contains valuable features such as: home financial programs, recipe organizers, accounting packages, word processing applications, educational programs and games. With our easy-to-follow documentation on disk and our unique menu system, you'll master each new application with confidence and ease.

Your Best Software Value

Without investing a fortune, BIG BLUE DISK will convince you that your personal computer is the most versatile and powerful tool you own. You'll learn more about your PC, its capabilities, and available software than you now believe possible. At \$6.65 an issue—you just can't find a better software value for your PC.

Call Toll Free
1-800-831-2694

Ami Beats Microsoft Word

First Full-Function Word Processor Under Windows Comes From Samna

This month Samna Corporation is shipping its *Ami* word processor, which may well turn out to be one of the most significant applications to run under *Microsoft Windows*. Although Microsoft reports there are 650,000 *Windows* units installed worldwide, the long list of programs running under the environment is dominated by graphics-intensive specialties from obscure vendors. Conspicuously absent from that list is Microsoft's *Windows* version of *Word*, whose ship date has not been announced. In the meantime, Samna's *Ami* fills the gap for the most popular application on a

PC. Priced at an aggressive \$149 until the beginning of February and \$199 after that, *Ami* capitalizes on the *Windows* interface to provide an intuitive menu system for quick learning and <Ctrl>-key combinations for advanced users. Users get a WYSIWYG preview of printer output and can use either their own or one of Samna's 25 preformatted style sheets for advanced page formatting without slowing data entry. Users also can place a "frame" for a scalable graphic within a document, and text will automatically flow around or even behind the graphic.

Adobe Illustrator Ships

Top Mac Graphics Program Demands a Hefty Hardware Platform

Adobe will bring its best-selling graphics program for the Macintosh to PC compatibles, but the software will require an 80286 machine or better with more than 1MB of memory. A DOS version of *Adobe Illustrator* will be available by year-end, says President John Warnock. The company, whose flagship is the PostScript page description language, has decided to gamble that the graphic artists, CAD users, and desktop publishers *Illustrator* targets will invest in 80286 or 80386 computers with expanded or extended memory and a hard disk. Warnock says that company research indicates that the program is likely to sell a lot of 80386-based computers. "The productivity in-

crease is so great that cost justification is a no-brainer," claims Warnock. "*Illustrator* on the Mac was able to take on \$100,000 CAD/CAM packages." Even so, bringing the functionality of the Macintosh version to the PC is like "fitting an elephant in a shoe box," he says. Adobe has provided virtually the same functionality by tapping the *Windows* graphic user interface and employing a data-swapping scheme that exploits conventional memory, expanded memory, and virtual disk storage in order to manage graphics files that typically range between 50K and 300K.

Intel Revamps AboveBoard

Expanded Memory Board Line Gains More Memory and Multitasking Capability

More than a year after announcing software support for multitasking in expanded memory, the Intel Personal Computer Enhancement Operation (PCEO) has begun to provide the hardware required to make it all possible. New models of the AboveBoard support multitasking and more memory for slightly higher prices. The \$795 AboveBoard Plus is an add-on memory card that supports the multitasking feature outlined in the August 1987 introduction of the Lotus/Intel/Microsoft Expanded Memory Specification version 4.0. With this board, users of Quarterdeck's *Desqview 2.01* can load and execute multiple applications simultaneously. Users of *Microsoft Windows/286* can load multiple DOS applications into memory, but run only one at a time; however, multitasking is achieved with applications written specifically for

Windows. Intel has a PS/2-compatible version of AboveBoard Plus and one with additional I/O ports. The new boards, notes Intel PCEO co-general manager Rich Bader, bring DOS users the same multitasking capability found in OS/2, a capability that AST's Advantage expanded memory board line has provided since 1986. The Advantage family has outsold Intel's AboveBoard line by roughly 2 to 1, claims AST executive vice president Tom Yuen, and roughly 150,000 of those units were shipped since EMS 4.0 debuted. Additionally, Intel, Lotus, Microsoft, and AST will make available to software vendors a new eXtended Memory Specification (XMS) driver that will give owners of 286- and 386-based PCs with more than 1MB of memory another 64K of extended memory. ●

How To Run Backwards & Forwards At The Same Time.

If your search for a totally compatible, high performance graphics card has felt a little like going in all directions at once, why not stop and take a breather. Because not only will VEGA VGA run all *current and future* VGA programs, it's also compatible with EGA, CGA, MDA, Hercules and even OS/2. Guaranteed.

Notice we said guaranteed. That's because of one simple fact: VEGA VGA is compatible, on a hardware level, with the IBM VGA. Just the sort of innovation you'd expect from the leader of the pack in graphics technology, Video Seven.

But VEGA VGA does much more than just keep pace with your software. It gives you the best business graphics available, in effect bringing PS/2-level performance to a regular PC. That means going well beyond standard VGA, with 800 x 600 resolution and up to 256 on-screen colors. What's more, VEGA VGA runs on any IBM PC monitor — analog, digital, color or monochrome. Finally, we protect your investment with toll-free technical support and a full five year limited warranty.

So don't wait. Visit your nearest Video Seven dealer today and find out more about VEGA VGA. It could take you in the best direction of all — to the top.

Video Seven Inc., 46335 Landing Parkway

The new Harvard can launch any sized

Now you can get big or small projects off the ground quickly with the new Harvard Project Manager 3.0.

Simply type in the project tasks. Indicate start and completion dates. And, Liftoff. You've just started planning your project with Fast Track, HPM's newest format which is easy to use as the dayplanner on your desk.

While Fast Track provides quick and easy access to HPM 3.0, five other project planning formats have the

power you need to tackle complex projects. Work Breakdown Outline, Work Breakdown Structure, PERT charts, Gantt charts, and Task List. Information entered on one format is automatically converted to all other formats. With a total of six to choose from, you have the flexibility to manage your project your way.

Through these planning formats HPM 3.0 brings you powerful capabilities such as critical path and dependency

mapping. Task annotations. Sub-project generation. Lag relationships. The ability to zoom in or out. Task slack display, and more.

HPM 3.0 can track individual resources and associated costs within a project or across multiple projects. Show who's overworked. Underworked. Part-time. Over-time. Even factor in individual vacation schedules with resource calendars.

Once your project is underway, it's

The Cure for MacEnvy.

For years PC users have been conditioned to think of their computers in certain terms. Dependable. Versatile. Dull. To get superior graphics, some claimed that you need a different type of computer altogether. They said *their* computer was everything the PC wasn't. Easy to use. Graphically exciting. Fun. PC owners were, well, *green* with MacEnvy.

Enter Micrografx.

With the Micrografx family of applications, you don't have to trade in your PC. Micrografx software turns your computer into a complete graphics studio for desktop design, publishing, and presentations.

Allow us to illustrate.

Micrografx Designer lets you go from rough concept to finished art, giving you the power to bring your ideas to life. Micrografx Graph Plus™ is packed with easy-to-use charting features for the business user. Micrografx Draw™ gives you control and simplicity in

a basic drawing program. And Micrografx software supports hundreds of printers like HP's LaserJet™ and PaintJet.™ All PostScript™ devices, too.

And there's more. Micrografx ClipArt™ libraries contain volumes of professionally designed symbols and illustrations. Micrografx Convert™ translates between the PIC and DXF file formats.

So take a bite out of the argument that PCs can't do superior graphics, and get the cure for MacEnvy. Ask your dealer for a demonstration or call us for more information.

Micrografx. The picture of success.

EISA: IBM's Canary in a Cage

The EISA bus standard is a warning to IBM that users are fed up with proprietary technology and trickle-down innovation.

Will Big Blue get the message—or is it too late already?

Everyone knows the old trick miners used to avoid the dangers of odorless but deadly coal gas: Bring a caged canary down into the shaft with you. If the canary dies, that means it's time to clear out—and fast.

IBM's got its own canary nowadays—the new EISA bus standard proposed by AST, Compaq, Intel, Tandy, Zenith, and a host of other PC manufacturers (see *Top of the News* in this issue). But Big Blue doesn't seem to appreciate the service those companies have performed by underscoring the fatal flaws in its own PC strategy. Too bad. By doling out new technology in bits and pieces, and by offering competitors the choice of paying exorbitant license fees or facing a long legal battle, IBM is ensuring itself a place in the history books reserved for those who lost big by not playing smart.

EISA represents the first time that PC clone manufacturers have challenged IBM's right to set the standards for personal computers, but it's not the first time they've led Big Blue in thoughtful innovation. Companies like Compaq, Dell, ALR, and Everex have all discovered a way to wring high performance from the AT bus while maintaining compatibility with it.

Meanwhile, either through incredible oversight or by deliberate design, IBM has developed a knack for releasing products that offer too little, too late. In 1985, IBM was one of the last companies on the block to produce an 8-MHz 286-based system. Despite its intimate knowledge of Intel's plans for the 386, 386SX, and 486 chips, Big Blue insisted that Microsoft design OS/2 for the 286 platform. Finally, with the Micro Channel, IBM devised an architecture that's incompatible with users' previous hardware investments and expensive for add-on developers to implement, while lacking the power or peripherals to really make it hum.

All this is even more baffling when you consider that OS/2 was designed to usher in an era of innovation in PC architectures. Because it insulates application software from the underlying hardware, OS/2 promises to run on many different kinds of systems. PC manufacturers will be free to produce machines that differ significantly in the way they handle both memory and peripherals. The smartest companies—like Compaq and Sun—

What makes good clip art?

Quality The most important measure of good clip art is the quality of concept and design. PicturePaks™ are created by professional illustrators with real-world business experience.

Compatibility Artwork must be in a format that

works with your software. Picture-Paks are the only libraries available in both vector (CGM, EPS) or raster (PCX, MacPaint, PIX) file formats.

Value Picture-Paks sell for \$99.95 per edition or \$250 for a set of 3 editions (over 565 pictures).

With a custom illustration costing upwards of \$100 it's easy to see how an entire PicturePak library can pay for itself the first time you use it.

RICHARD LANDRY

will stay within industry bus standards while innovating in those other areas to gain a performance edge. That's been the case with UNIX-based engineering workstations for several years, and it's coming to pass in the PC arena now.

Furthermore, most users don't stand to benefit in the short term from any bus architecture that fractures the AT standard. As Compaq's chief engineer Gary Stimac readily acknowledges, neither the Micro Channel nor the AT bus is being stretched to its limit by the current generation of software and peripherals. Microsoft has plans for a multi-user, multiprocessing version of OS/2, but those are taking a backseat to its efforts to support the 386 chip first. Meanwhile, Intel's Connection CoProcessor is proof that the AT bus—and DOS—is capable of handling intelligent peripheral devices.

EISA—and perhaps the Micro Channel—will come into its own only in an era when PCs can truly replace minicomputers and mainframes as the cornerstones of office computing. When that time comes, it won't matter if you bought an old-fashioned AT compatible or a newfangled PS/2 Model 50 Z today. You won't be shuffling your old add-in cards into the new system. You won't be stuffing your old box with new multiprocessing cards, either. You *may* find yourself wondering why you bought a low-performance PS/2 when a high-performance, industry-standard machine was available for about the same price.

The Micro Channel isn't mythical technology. The performance gains it can potentially provide

are great. But lately IBM hasn't focused on proving the Micro Channel's benefits to users who might be willing to suffer some inconvenience and pay more for world-class power. Instead, the company's been sticking vendors for up to 5 percent of revenues as the price they must pay to produce Micro Channel clones. Once it's complete, the EISA specification will be placed in the public domain, basically free for the taking. No wonder all the major PC manufacturers managed to sit down at the table and hammer out a common design.

The Micro Channel's not dead yet. The first EISA products won't roll off the assembly line until sometime in late 1989. IBM, meanwhile, is the best-endowed computer company in the world, with a global army of distinguished scientists and engineers. If the company has the guts, it can validate its claims for the Micro Channel in the nine-month lead time its competitors have provided. But it's time for IBM to stop treating users simply as pawns in a war between vendors and to start delivering true next-generation power at a competitive price. Only that will keep the market from slipping through Big Blue's fingers. Legal maneuvering will reap the scorn it richly deserves.

As always, I'm interested in your opinions on this or any other subject. Write to me at *PC World*, 501 Second St., San Francisco, CA 94107, or send an MCI message to Richard Landry/301-3685. ●

TI's OmniLaser 2106. The laser printer for today, tomorrow, and when there is no tomorrow.

When your success depends on making great-looking documents, you need a laser printer that's versatile enough to handle just about anything that comes up. That printer is Texas Instruments OmniLaser™ 2106.

This quiet, six-page-per-minute laser printer comes with all the capabilities you need to produce word processing, spreadsheets and other PC applications. It also comes standard with Adobe™ PostScript®, the magic behind desktop publishing. So you get unsurpassed control over type, graphics and page composition. All from the top of your desk.

Beyond word processing.

Today, people in every pursuit are changing to desktop publishing to give their

documents an edge. With over 600 software packages supporting PostScript, TI's OmniLaser 2106 gives you the power to print today's documents and then go far beyond. Because not only does the OmniLaser emulate the HP LaserJet Plus™, it also features Adobe PostScript. So your documents look better, communicate faster and sell harder.

*TI's OmniLaser 2106
with PostScript gives
you excellent control
over type, graphics
and page composition.*

Improve your standard of printing.

TI's OmniLaser 2106 gives you great graphics, text that looks typeset and paper handling features that allow you to print on envelopes, legal size and more. It also features multiple industry-standard emulations and interfaces. All easily selectable at the touch of a button.

TI's OmniLaser 2106. It's the laser printer of your future, as well as the one you need right away. The OmniLaser family also includes the 2108 small-cluster printer and the 2115 shared-resource printer. For a free brochure on how to choose a laser printer and information about TI's on-site warranty, call 1-800-527-3500.

PRESENTING AMERICA'S HOTTEST NEW CORPORATE JETS.

FIVESTAR'S fleet of powerful business computers have really taken off in the last three years. That's because they're built for corporations that want to get where they're going in a hurry.

We build a full line of high-powered performers that not only provide *total* PC compatibility and advanced business capabilities, but also offer American-made ingenuity, quality and value.

In fact, when you *really* compare, you'll find that FIVESTAR Computers leave the competition far behind.

FIVESTAR 286's. **The performance to fly through heavy workloads.**

FIVESTAR 286's provide the features and performance aggressive companies need to reach higher corporate goals. In fact, they're designed to run future as well as current operating systems.

The 286/10 is powered by an Intel 80286 microprocessor that operates at a fast 10 MHz, with zero wait states. With 640KB memory and 1.2MB floppy disk drive, you'll soar through today's popular business applications. Serial, parallel and game ports, and an enhanced 101-key keyboard, provide in-flight convenience.

The 286/14 is also powered by an Intel 80286 CPU, but operates at 14 MHz (with zero wait states) for even faster performance. It, too, comes equipped with 1024KB memory, 1.2MB floppy disk drive, serial/parallel/game ports and a 101-key keyboard. No doubt about it — it's a hot machine and a dream to fly!

FIVESTAR 386's. **Don't forget to fasten your seat belt.**

The incredible speed and power of FIVESTAR 386's have made them a leading choice of corporations across America for multitasking and sophisticated applications, including CAD. In fact, there's so much performance and value built into our 386's, it can take your breath away.

The 386/16 is fast. Very fast. That's because it features an Intel 80386 CPU operating at 16 MHz, with zero wait states. And its 1024KB memory and 1.2MB floppy disk drive will keep you airborne for long distances. Serial/parallel/game ports and a smooth performing 101-key keyboard are standard equipment.

Prices:

**The 286/10 –
from \$1099.**

**The 286/14 –
from \$1499.**

The 386/20. It's made for those who want to fly to the outer limits. With an Intel 80386 micro-processor operating at 20 MHz (with zero wait states) it'll move through the most complex applications with astounding ease. And you won't have to worry about running low on memory either. It not only features 1024KB of RAM and a 1.2MB floppy disk drive, it also has a 64KB cache memory. Naturally, it comes equipped with serial/parallel/game ports and a 101-key keyboard, too.

**Customize your FIVESTAR
to meet your own specifications.**

All FIVESTAR 286 and 386 Computers are available with hard drives, from 20 to 320 MB, as well as a choice of monochrome, EGA, VGA or super-high resolution paper-white monitors. Whatever the requirement, FIVESTAR can meet it.

Prices:

**The 386/16 –
from \$1999.**

**The 386/20 –
from \$2999.**

**Unmatched reliability.
Unbeatable ground
support.**

Because every FIVESTAR Computer is tested and certified to meet the highest standards of quality, you can count on years of

reliable performance.

Once you've purchased your FIVESTAR computer, you'll get all the support you'll need. Just call our highly-trained service department *toll-free*. Most difficulties can be resolved within minutes.

For companies with critical applications, a comprehensive on-site service contract is available for just \$99. In most cases, service calls are made within 24 hours.

**Order by phone today.
And move your company to higher
levels of performance.**

To order a FIVESTAR 286 or 386 Computer, or for more information about our full line of high-powered computers, call us TOLL FREE. We'll have your hot new corporate jet parked in your hanger in no time!

Las Vegas Convention Center — West Hall
Las Vegas, Nevada

Sure, you're going to love the new look of Sigma Designs' LaserView Display System.

But the real beauty is in how well it handles your desktop publishing, spreadsheets and word processing.

Quite simply, LaserView offers the sharpest image anywhere: an eye-opening 1664 x 1200 (115 dpi) resolution for detail drawings, half-tone images, or even 6-point type. And an additional resolution mode of 832 x 600 for text-based work (for the Macintosh II and SE).

So what you'll get is the performance of a workstation in

a PC environment. A full 19" monitor that's easy on the eyes, thanks to its high contrast screen; easy on the body because of its tilt/swivel base; and easy to work with, since you can view anything from a two-page spread to an engineering drawing.

Put it all together and you have a single monitor solution for IBM PCs and Macintosh II or SE. With full software compatibility.

LaserView allows you to see your work the way it was meant to be seen. No matter what software

you're using — Ventura Publisher, Pagemaker, Excel, or whatever.

Want a closer look? Visit your nearest authorized Sigma Designs dealer. Or call Sigma Designs today at 415-770-0100.

Then see why the newest screen star isn't just another pretty face.

Reactions and responses from the PC World community

IBM Royalty Rap Off Base

Regarding David Bunnell's recent column ["IBM's Imperialism: Boon or Boomerang?" *PCW*, August 1988], I'm not sure I heard it right: IBM should let anybody use its patents any way they want, for free, so that U.S. personal computer users won't be deprived of "the right to choose the kind of system they want to buy"?

I suppose people can voluntarily give away their intellectual property, but there are reasons why we have intellectual property laws. The point here is not whether IBM has a market-share "birthright," but rather that the company has specific legal rights and is exercising them. Surely Mr. Bunnell would be unhappy if people started distributing his column as their own.

Alan S. Hejnal
Upland, California

The point of my column was that IBM is cross-licensing PS/2 technology to American companies while demanding retroactive royalties from Asian companies on old PC technology. Users should be aware that the result of this tactic could be higher prices for personal computers—and fewer choices. —David Bunnell

The Future Is Here

I read with interest Stewart Alsop's column ["A Manifesto for

the Future," *PCW*, August 1988] calling for a computer that "actually does something new, instead of just doing the same old thing even faster." I searched for a computer using criteria similar to Mr. Alsop's and to my surprise found that such a computer exists today. It delivers 256 colors from a palette of 16 million (or 256 gray levels if you prefer) in 640 by 480 resolution, and has a built-in stereo audio chip that produces high-quality digitized sound. It communicates easily with PCs, minis, and mainframes; it's easy to network; and its operating system has most of the features promised by OS/2.

The computer? The 15.7-MHz Apple Macintosh II.

Hisham A. Almufti
Bethlehem, Pennsylvania

Best of Shareware: Addendum

It's unfortunate that George Campbell missed a real gem in his "Best of Shareware" buyers' guide [*PCW*, August 1988]. I'm speaking of *QEdit*, a feature-rich ASCII-file editor available from SemWare, 730 Elk Cove Ct., Kennesaw, GA 30144.

After reading the August *Star-Dot-Star*, I would also recommend the program to Tom Swan ["Developer's Toolbox"] in lieu of his recommendation, the \$195 *Brief*. I think he might find (*continues*)

it an equally effective tool for programmers.

Robert M. Clark
Danville, California

The User's Best Friend

It's always nice to see a write-up of shareware in a major computer publication such as yours. However, the article failed to mention one of the best places to obtain shareware: the local user group.

Although the user-group library may be smaller than those of the commercial suppliers you mentioned, the advantages of obtaining shareware and public-domain programs from such a group include lower costs, a

chance to talk with someone who has used the program, and local support services. User groups offer a lot to both novice and experienced users, and to everyone in between. Please don't ignore us just because we're small.

Richard Curry
President
Columbus Computer Society
Columbus, Ohio

Still Afraid of 1984

Although I am an avid PC user, I have always feared that the widespread use of computers would ultimately rob us of our ability to think. Your review of the AST Premium/386 [*The Hardware Shelf*, PCW, August 1988] has convinced me that my fears are well grounded.

Specifically, you state on page 135 that the AST I/O bus runs at 8 MHz, while the IBM PS/2 Model 80-111's runs at 10 MHz, thus giving the IBM a 20 percent edge.

Where did you guys go to junior high school?

A 20 percent improvement over an 8-MHz speed would be 9.6 MHz. In actuality, the 10-MHz IBM bus is 25 percent faster than the AST's. I realize that this is a small point, but it reflects a bigger problem.

Mark E. Bradley
Stoneham, Massachusetts

Good eye. That's what we get for doing all our figgerin' in hexadecimal. —Ed.

Stuck With PagePerfect's Imperfections

I didn't listen: In spite of your admonitions ["PagePerfect," *PCW*, July 1988], I went out and bought a copy of IMSI's *PagePerfect*. It is the single worst program I have ever used—and I've used a lot of programs.

It is clumsy, slow, and so full of bugs that it crashes with unbelievable frequency; all data is lost and you are left at the DOS prompt with an indecipherable error message. And instead of downloading fonts to my LaserJet, it leaves them on disk, turning the printing of a single page into a 10-minute operation.

I've learned my lesson.

Harry I. Shuman, M.D.
Tampa, Florida

A Trustworthy Trinity

The August 1988 *Hardware Shelf* states that the Epson LQ-1050 is "possibly the perfect 24-pin dot matrix printer," but went on to criticize the "unreliable sheet feeder" and "occasional paper jams."

There are only three reliable objects in my life—my Toyota Camry, *WordPerfect*, and my Epson LQ-850 (the narrow carriage version of the LQ-1050). It is the perfect dot matrix printer, has a reliable sheet feeder, and rarely jams.

Leslie R. Morris
Niagara University, New York

.OBJectionable Review

Your review of Turbo Pascal 4.0 [*The Software Shelf*, *PCW*, Au-

gust 1988] states incorrectly that the compiler is not yet compatible with Microsoft .OBJ-format files. Not only does Turbo Pascal 4.0's linker work well with .OBJ files, it can also handle *near* or *far* calls contained in those files. The compiler's manual does an excellent job of explaining how to link .OBJ files into programs.

Joseph E. Crouch
Balch Springs, Texas

In fact, Turbo Pascal's linker works well only with .OBJ files produced by assembly and C compilers. Other compilers don't follow Turbo Pascal's segment-naming conventions, and so their .OBJ files cannot be linked into Turbo Pascal programs. This important distinction was mistakenly edited out (continues)

Rapid letters. Rapid File.

Calligraphers Guild of America

22 William Penn Avenue • Pittsburgh, Pennsylvania 15002

March 1, 1988

FIRSTNAME	MEMBERNAME
TITLE	
ADDRESS	
CITY, STATE	ZIPCODE

Dear FIRSTNAME:

We're pleased to announce that the Calligraphers Guild will no longer have to go through the tedious work of writing its members by hand.

From now on, all our mailing tasks will be done by RapidFile, the fast, easy database system for lists, labels, reports and form letters. And as you can see from the attached report, we'll save 2,942 hours per month with RapidFile.

RapidFile includes automatic mailing label processing, word processing and a versatile report writer perfect for printing checks, envelopes and invoices.

And, FIRSTNAME, RapidFile is so easy to learn and use! It also makes it a breeze to share data with other software like Lotus® 1-2-3®, dBASE® products, MultiMate Adventure II™, Framework®, PFS: Professional File™ and ASCII text files.

Best of all, RapidFile 1.2 now has a 80,000-word spelling checker, a 470,000-word thesaurus and 12 new ease-of-use features.

And if we need more power, we can move up to dBASE IV with Ashton-Tate's special RapidFile upgrade pricing.

FIRSTNAME, RapidFile's new lower price made it too good a deal for the Guild to pass up. To say nothing of what we'll save in pen nibs and blotters.

Sincerely,

Dalliah Baipoint
Guild President

While dBASE Promises You The Moon, Clipper Delivers.

Right now, while others dream about the database of the future, you can be using it today to create applications of unparalleled sophistication. With Clipper® — the most powerful and complete database development system for PCs.

Open the Clipper box and you'll find the enhancements dBASE® has been promising. And some it hasn't.

Such as: a remarkable development language that takes you way beyond dBASE® emulation, with enhanced commands and entirely new language extensions. A unique open architecture which gives you the flexibility to create and easily integrate user-defined functions in C, Assembler, Clipper, and still other languages. The speediest-ever dBASE compiler, yielding applications up to 20 times faster. And that's just for starters.

Clipper also provides the most capable menu-driven debugger to be found anywhere, as well as half a dozen modifiable utilities to further reduce development time.

There's source code security, too, plus sophisticated record and file-locking capabilities that make networking

We have one thing to say to the people who keep getting personal about PROCOMM PLUS.

"Right now, PROCOMM PLUS is the definitive telecom program and the one I personally use and recommend."

John C. Dvorak,
columnist, PC Magazine

People who review software have a very tough job. They see hundreds of new programs every week. But the ones who have seen the new PROCOMM PLUS communications software are doing more than writing rave reviews about it. They're getting personal. They're using it at work and at home.

Maybe it's because PROCOMM PLUS is so easy to use it's "intuitive." Or perhaps it's because PROCOMM PLUS has an extremely powerful script command language, context sensitive help, 16 terminal emulations with keyboard re-mapping, 12 file transfer protocols, a fully-automated dialing directory, and advanced host mode with electronic mail.

But one thing is for certain. If PROCOMM PLUS is the personal choice of the people who review software, you can be sure that PROCOMM PLUS is right for you.

It's time you got personal about PROCOMM PLUS. Ask for PROCOMM PLUS at a dealer near you. Or, call 314-474-8461.

Thank You.

LETTERS

Polaroid Palette

of Michael Covington's manuscript, and we regret the error.
—Ed.

Corrections

Those readers who aren't color blind may have noticed that our review of the Xtron MF147 monitor ("Viewers' Choice: 13 Monochrome Monitors," *PCW*, August 1988) contained an editing error; obviously, we reviewed the amber and not the paper-white version of the monitor. We also mistakenly reported that the unit was manufactured in Korea, when in fact it was manufactured in Taiwan. We apologize to Xtron for the mistakes.

Further, although Xtron claims that it does not ship a monitor with a 17-MHz bandwidth (a statement supported in MF147 documentation from several dealers), the author, TJ Byers, reports that a 17-MHz rating was printed in our review unit's documentation. In any case, we stand by the author's qualitative judgment of the monitor.

A review of the Polaroid PalettePlus (*The Hardware Shelf*, *PCW*, March 1988) stated unfairly that the PalettePlus offers "few discernible improvements in image quality" over the original Palette. The authors based their analysis on tests that failed to

Polaroid PalettePlus

fully implement the PalettePlus's EGA capability, as shown in the comparative screens that accompanied the review. In fact, the PalettePlus offers improved resolution with programs that use the PalettePlus driver on EGA-equipped systems. The accompanying screens show a comparison of the same *35mm Express* file captured on the Palette and the PalettePlus. *PC World* regrets the error.

In our August 1988 review of five XT clones ("XTs for Bargain Hunters"), we mentioned that all the machines (except the Maxum Turbo XE) were equipped with an 85ms Seagate ST-225 hard drive. In fact, the ST-225 is rated at 65ms. We also said that all the machines have 135-watt power supplies; while that's true of the Maxum and the Plain Vanilla PC, the others come with 150-watt power supplies. *PC World* regrets these errors.

Last, the telephone number for Blackship Trading Company in the Where to Buy listing of August's "Business Class ATs" works only within California. Outside California you can reach Blackship at 415/952-7955.

IBM PC & Compatibles; Tandy 1000 & 3000 Computer Users:

Publish-It! in less than an hour.

With Timeworks You Get:
• A Money Back Guarantee
• Free Customer Technical Support

PUBLISH IT!—A full-featured, fully integrated desktop publishing powerhouse with word processing, page layout, typesetting and graphics.

Even if you have no design skills or publishing experience, you can get results in less than an hour with **PUBLISH IT!**

For all its state-of-the-art ability, **PUBLISH IT!** is incredibly easy to learn—refreshingly so. **PUBLISH IT!** combines the familiar GEM User Interface, our Quick-Start Mini-Manual, a full complement of Help Screens, and the practical **WYSIWYG (What-You-See-Is-What-You-Get)** display—all designed to get you up and running in less than one hour!

SPECIAL FEATURES:

- **GEM User Interface:** It's fast and easy. Pull-down menus, icons, scroll bars and dialogue boxes help you learn and use the program quickly. Your display screen shows you exactly what your final product will look like when you print—**What-You-See-Is-What-You-Get**.
- **Flexible Page Layout:** With your mouse or joystick, and keyboard, you can overlap, reposition, resize, & reshape the text, columns, graphics. Change your layout or experiment almost effortlessly!
- **Built-in Fonts:** Choose from over 1200 possible type-style combinations! Opt for bold, italic, underlined, white, light, & superscript or subscript characters. Type sizes range from 7 to 72 point.
- **Premium Quality Printouts:** **PUBLISH IT!** uses a special high density printout format that gives you superior quality printouts on your dot matrix printer.
- **Built-in Word Processor:** All the features necessary for everyday word processing, plus most of the sophisticated ones found only in more expensive programs.
- **Text Importing:** Load documents from WORD PERFECT, MICRO-SOFT WORD, WORDSTAR, WORD WRITER PC, or from any other program with an ASCII text format directly into **PUBLISH IT!***
- **Built-in Graphic Toolbox:** Draw lines, boxes, circles, curved corners, and "free-hand" graphics. Plus, choose from a wide variety of built-in line and fill patterns.
- **Kerning and Leading**

- **Graphics Importing:** Directly import graphics from LOTUS 1-2-3, GEM DRAW, GEM GRAPH, GEM SCAN, PC PAINT-BRUSH, and PUBLISHERS PAINTBRUSH.* Then crop and size them to fit.
- **Automatic Text Flow and Word Wrap:** Flows text from around graphics: and from column to column on the same page, or carries it over to subsequent pages.
- **Multiple Size Page Views:** View, edit and layout pages at actual, double or half-size.
- **Over 150 Professionally Drawn Graphics & Illustrations.**
- **Plus, you get worksheets, time-saving features, sample documents & more!**

Includes 5¼" & 3½" disks; supports hard drive.

Suggested Retail Price **\$199.95**

**What looks like DOS,
acts like DOS,
is easy like DOS,
can hook everybody up
and keep 'em hopping
from program to program,**

**and costs less than
an office chair?**

The Comfortably Affordable (and already available) PC-MOS.™

If you can afford a nice leather chair for your office, you can afford a multi-user, multi-tasking operating system that's just as comfortable to use.

PC-MOS incorporates breakthrough technology that allows you to fully harness the power and capabilities of 80386-based computers, while maintaining the compatibility and ease of

use of DOS. So now you can have up to 25 inexpensive terminals driven by a single 80386 processor. You can continue to use your favorite software programs like Lotus 1-2-3,™ dBASE III,™ and WordPerfect,™ and you can keep using those familiar DOS commands like DIR and COPY. You can even run all those terminals as a single cluster

connected to a Novell server.

PC-MOS comes in single, five and 25-user versions starting at \$195. Your satisfaction is guaranteed or you get a complete refund.

For more information about PC-MOS and the name of the authorized dealer nearest you, call 1-800-451-LINK. Then you can sit back and relax.

'Til Death Do Us Part?

Has our relationship with software companies matured as much as our understanding and use of computers has?

Can this marriage be saved?

David
Bunnell

Three or four years ago, PC users everywhere were reluctant players in a drama called "The Copy Protection Snafu." By complaining loudly and refusing to buy copy-protected software, we won that round of the battle we're always fighting as consumers. After much travail and inventiveness on the part of users who figured out ways to break protection codes in any case, the companies caved in one by one, and most software sold today is not copy protected. Pardon me while I don my populist hat, but I think this is a great example of how users can band together to make change in an industry we've built into a major economic force.

For those ready to take up the cudgel again, I'd like to present another problem that needs our energy: getting better support and warranties for the software we buy. I think we need a uniform licensing code. Some software companies think they've been so magnanimous in hearing us out on copy protection that they need give no more. Their idea of a guarantee is to say, The disk is formatted, the manual has been proofed and printed, call us when you want to buy again. Microsoft is one of the few exceptions in that it guarantees satisfaction on all application software.

Don't you think that a program costing \$400, \$500, or \$600 deserves a little more support from its seller—especially when the cost of the goods going into it is often less than \$25? Sure, the ingenuity of the idea, the programming, and the marketing are worth a lot—but \$500 a copy includes a healthy profit. Software licenses should represent an ongoing relationship between seller and buyer.

At the very least, we should have the satisfaction of a code spelling out certain elements we could always count on in buying software. This would include some mention of an ongoing upgrade plan. As it stands, we're ripped off all too often by buying what really amounts to a shrink-wrapped, beta-test version of a program. There are invariably bugs and missing features that the next couple of versions help remedy, but the overall effect of a company being first out of the gate is to penalize early buyers. And then we're stuck choosing between versions when we don't know what's coming next or when we'll see it.

A uniform code would also ensure that incremental upgrades would be sold for some fixed percentage of the original cost of
(continues)

You just won another big job.

Whose software do you trust to control it?

Since 1983, Primavera Project Planner has set the standard for project management software. That's why you can trust Primavera with the most important project in the world...yours.

Contact us for details on our newest features, including Import/Export from Lotus 1-2-3® and dBASE®, on-screen graphics with customizing capability, and pure logic networks.

**Software you can count on
to keep you in control.**

PRIMAVERA SYSTEMS, INC.
Project Management Software

Two Bala Plaza • Bala Cynwyd, PA 19004

the program. I think that 15 percent is a good guideline. Having a reasonable and predictable price for upgrades would give buyers more confidence in their purchasing plans, and vendors could count on steadier sales year in and year out. With releases as random as they are now, software companies spend more on promotion, and you'd better believe that we pay more as a result.

As for our responsibility in this committed relationship, we have to become more savvy consumers. We must know our rights, but we must also send in warranty cards and keep track of bugs, fixes, and price points that matter to us. We should let companies know when their advertising works and how they can market their products more effectively—even after the sale. What kind of technical support do we expect? Are the companies aware of that expectation?

I think that user groups and associations of user groups can lead the call for a code that will make our lives a little easier. We've lived long enough with PCs to know they're not a fad, remarkable though they may still be. They are tools we want and need to use in all kinds of work we do. We've made software companies successful by using their products in our machines. This relationship implies a responsibility on both parts. If we agree not to illegally copy or alter software, if we are willing to learn new programs and commands and even languages in order to work more effectively, then software companies can work to improve and support their products for our use. To paraphrase an old saying, what's good for business is good for users everywhere. ●

TI's OmniLaserTM 2115. The network printer you need when your application needs are demanding.

The high-speed laser printer for shared-resource environments that can handle many people performing many tasks.

TI's OmniLaser 2115 printer provides the flexibility you need in multi-application environments. Especially where you have several different hardware systems attached to a network.

Built-in emulations mean an OmniLaser can satisfy the needs of virtually any application. It can produce desktop publishing output using the Adobe PostScript[®] page description language. It can emulate a dot-matrix printer for spreadsheets and draft text. Or an HP LaserJet[®] for word processing and business graphics. Even a plotter for

advanced graphics.

Best of all, with speeds of up to 15 pages per minute and a duty cycle of 25,000 pages per month, it can satisfy the needs of even the busiest group of professionals.

You can connect an OmniLaser to virtually any computer or network. It features multiple standard interfaces for IBM[®], DEC[®], Apple[®], even specialized hardware like CAD/CAM workstations.

Trouble-free paper handling.

The OmniLaser 2115 prints beautifully on a variety of paper stocks and sizes. Its two 250-sheet paper trays let you load stationery, letter- or legal-size paper, and select the size you need through its easy-to-use front control panel.

The right printers for right now, and in the future.

With the OmniLaser 2115, you have the flexibility you need for today's sophisticated printing applications. You also have the confidence of knowing that your OmniLaser offers a safe path to the applications of the future.

The OmniLaser family also includes the 2106 workstation printer and the 2108 small-cluster printer. So whatever the demand of your application, there's a multipurpose OmniLaser that's right for you.

To find out more, call Texas Instruments toll-free 1-800-527-3500.

Give this to and you hear from

Upgrading mass storage used to mean one interruption after the other.

Your users were very easily confused.

And you weren't always free to answer questions like, "How do I set up a subdirectory?" Or, "How do I upgrade the DOS on my hard disk?"

But, all that's changed. With Plus Hardcard™ 40 you can upgrade your users to 40MB easily and never have to worry about it again.

Because Plus Hardcard has been specifically designed with the end user in

**Plus Technical
Support Line**
1-800-826-8022

mind. It's completely different from other hard disks. For example, you won't have to personally install the Hardcard. Most of your users can do it in minutes. There's no system reconfiguration. No connector cables or adapter cards. And there's plenty of simple documentation ready to help those who don't know their keyboards from their clipboards.

There's even a toll-free technical support number for installation and user information. So if any of your

your users will never thank you again.

people have immediate
questions, you won't have

compatible with some
of the biggest names in the

Hardcard[™] 40

to be the one with all the
immediate answers.

More importantly, Plus
Hardcard is the most reliable
(40,000 hours MTBF) fixed
disk available. It also
happens to be extremely
fast (access time 35ms) and

PC WORLD

December

Hardware Buying Guide

In the past year, we've seen a bonanza of new and challenging hardware technologies. Understanding when you need state-of-the-art equipment is the key to making intelligent choices. Buy smart, and it makes a difference in the way you work.

PC World's hardware extravaganza focuses on the latest and greatest offerings in the PC universe. Buyers' Guides survey PS/2 peripherals and high-powered 80386 systems, and our reviewers scrutinize 15 VGA monitors, 10 VGA boards, 7 20-MHz 386s, and 7 light-weight laptops. With the support of NSTL's performance benchmarks and compatibility tests, plus our Features Evaluations, we highlight the most important factors in your hardware buying decisions.

Who Likes the PS/2?

IBM sold the first generation of PS/2s—complete with Micro Channel Architecture—as the systems of the future. Well, the future is here, and even IBM's most loyal customers are wondering just what they bought.

Here's an offer only the most analytical minds in America can appreciate.

Buy 1.

Get 1 free.

After exercising your grey matter with a few hundred "what if's" every day, it's nice to have a no-brainer to deal with. How's this: for every Lotus® 1-2-3® Release 2.01 you buy on or after September 6, 1988⁽¹⁾, you get a free 1-2-3 Release 3 Upgrade as soon as it's available. (Be sure to save your proof of purchase.)

Easy decision.

After all, 1-2-3 Release 2.01 has recently been rated the top-performing

spreadsheet for an unprecedented fifth straight year by the NSTL.⁽²⁾ In fact, 1-2-3 is the backbone of business, with over 7 million users who depend on it everyday.

Plus, the upcoming 1-2-3 Release 3⁽³⁾ will be the most powerful spreadsheet on the market by far, yet it will offer the familiar 1-2-3 interface and be fully compatible with all your present 1-2-3 data, macros and applications.

The new 1-2-3 will offer an exciting

3-dimensional spreadsheet for better organization and consolidation of data. Plus, improved graphics and powerful database enhancements, including the ability to access external databases, like dBase®, from within your spreadsheet.

See your Lotus Authorized Dealer or Lotus sales rep for details.

Lotus 1-2-3

(1) Upgrade offer valid September 6, 1988 through 30 days after the 1-2-3 Release 3 ship date. (2) National Software Testing Laboratories, Inc. Software Digest Ratings Report, June, 1988. (3) 1-2-3 system requirements will vary from Release 2.01 to Release 3. 1-2-3 Release 3 runs under DOS and OS/2. Hard disk and 640K required. Lotus certified compatible PC with 80286 processor or better recommended. Lotus and 1-2-3 are registered trademarks of Lotus Development Corp. dBase is a registered trademark of Ashton-Tate Corporation.

Introducing the next generation computer, the Cambridge Z88.

No disks. No DOS.

THE MOST PORTABLE, FULL
FUNCTION COMPUTER EVER MADE.

- No disks, or disk operating system
- 8.25" x 11.5" x .875", weighs less than 2 lbs., goes anywhere
- 32K of built-in memory, expands to over 1.5 megabytes
- Powerful applications software
- Supertwist LCD display, 8 lines x 106 columns
- QWERTY keyboard with silent travel keys
- Operates on 4 AA batteries for 20 hours
- PCLink imports/exports Wordstar, Lotus 1-2-3, and ASCII files
- Solid state Memory Cartridges™ for added memory
- Permanent storage of contents on EPROM Memory Cartridges™

The Cambridge Z88, not the average personal computer.

The Cambridge Z88 wasn't designed to be the average personal computer. In fact, the Cambridge Z88 is the first in a new generation of personal computers, unlike any computer ever seen before.

Operating without disks or a disk operating system, the Z88's internal software enables you to move easily from task to task without booting, loading, opening, saving or quitting. Replaceable solid state Memory Cartridges™ add to memory capacity, operating ease and program capacity.

Designed by Clive Sinclair who introduced the breakthrough Sinclair ZX80, 81 and QL, the Cambridge Z88 is compact, lightweight, and powerful enough to be used anywhere; just switch it on.

The best news about the Cambridge Z88 is the price; you pay less for this personal computer than you would for some PC software and peripherals—\$599.00. And it won't cost you anything to try the Cambridge Z88 yourself.

Architecture

The Cambridge Z88 is designed with four chips: a CMOS Z80; a 32K RAM (expandable to over three megabytes); a 128K ROM for the operating system, powerful BASIC, and built-in applications (word processor, spreadsheet, daily date manager, etc.); and custom controller chip.

Memory

The Cambridge Z88's memory is expandable with replaceable solid state RAM and EPROM Memory Cartridges™ that fit into three easy to access slots under the keyboard. The EPROM cartridges retain their contents when removed from the Z88.

Task switching

With *Instant On™*, there's no booting, loading, opening, saving, or quitting. When you want to work on a new task, press the INDEX key to display a list of applications and files; then select one. The task you were working on will be instantly saved. Switched off, the Z88 automatically saves your work; turn it on again, everything appears exactly as you left it.

Operating features

Display: 8 lines by 106 column supertwist LCD display with 80 columns of work area, including page map with a view of the entire page and command menus.

Keyboard: A full sized, easy to use QWERTY keyboard with silent travel keys. Context sensitive command menus can be opened to display all of the available commands and their keyboard equivalents.

Communications

The Z88 has an RS232 port for a printer (serial and parallel cables are available), modem, and a PCLink enabling ASCII, Wordstar, and Lotus 1-2-3 files to be transferred to and from your PC.

Memory Cartridges™ are available in 32K, 128K, and 512K.

A Perspective on the Presentation Manager

The graphic user interface tells a story about what manufacturers think of users.

It's not a pretty picture.

Around the time you read this column, in late October or early November, you should be hearing quite a lot about the Presentation Manager. If it's not shipping, you'll be hearing the thud of blows as IBM and Microsoft get beat up in the press for promoting vaporware. If it is shipping (and my best guess, as I write this in late August, is that it will be), then you'll be hearing all the gurus and gods of the PC industry proclaiming the goodness or badness of this latest and greatest graphic user interface.

Earlier this year I realized that the graphic user interface (GUI) would ultimately become the battleground for computer systems manufacturers. So I spent some time sitting in front of the various GUIs competing for our attention, including Apple's Macintosh, Hewlett-Packard's *NewWave* extension of *Microsoft Windows*, Sun's Organizer interface for its 386i workstation, Sun and AT&T's Open Look interface for UNIX, IBM and Microsoft's Presentation Manager, Xerox's Viewpoint interface for its 6085 workstation, and Tandy's *DeskMate* interface for DOS. I have used a Macintosh regularly and *Windows* programs sporadically—in addition, of course, to all the DOS programs I know and love, each of which sports its own interface.

So now I consider myself an expert observer (but not designer) of user interfaces. Here's the first thing I learned: Most of the so-called experts have never actually sat in front of the interfaces they are pontificating about. As a result, most of what they have to say about user interfaces is pure hogwash.

Perhaps a little history is in order. The researchers at Xerox PARC (Palo Alto Research Center, where much of the original research into user-interface design was completed in the early 1970s) determined that, since most people who use computers work in offices, it might be helpful to use graphic representations of office tools to represent computer tools. Thus was born the infamous "desktop metaphor," which contained such items as a wastebasket for clearing objects from the screen, filing cabinets to represent storage space, folders and books to represent groups of files and directories, and in- and out-boxes for receiving and sending electronic mail. Indeed, in the Xerox model (carried into its Viewpoint interface) there is no such thing as a software program (since it has no real-life equivalent); anything you do—like writing or drawing or filing—is simply part of the

(continues)

Stewart
Alsop

computer system. It took Apple to come up with the idea that software was a separate object on the desktop and that each program (and therefore each developer/publisher) should have its own icon and identity beyond that of the system.

Unfortunately, much of this basic notion of modeling computers on the real world in order to help the user has been lost, because the industry neglected to distinguish between graphics technology and a graphic interface. Graphics technology gives computers the ability to turn spots on the screen on and off and, by arranging these spots, to make graphic objects appear. (This technology is called bit mapping.) Instead of setting out

to help the user, each developer focused on proving to the world that its machine was more "graphical" than anyone else's: Witness IBM's dramatic announcement of a machine with a palette of 256,000 colors that can actually display 256 of them in any one of 307,200 spots (or "pixels") on its best color monitor.

The net effect of this achievement (known by yet another user-friendly acronym, VGA) is to help your machine turn pixels rapidly on and off, giving you your graphic interface. Of course, you're restricted to eight-letter file names (plus a three-letter extension), and you're still required to understand the concepts of path names, AUTOEXEC files, and CONFIG.SYS files if you want to customize any of your applica-

tions. And VGA does absolutely nothing to help most users get more out of their machines; it just lets them do what they've been doing for the past four years with a lot more colors and a lot faster.

No one is going to say VGA isn't good enough just because the developer left out some icons and other metaphors. But let's not call this a graphic user interface. Instead, let's insist that IBM and Microsoft finish the job they started. For instance, when you see your first demonstration of the Presentation Manager, ask the rep: Why do I need to put brackets around the path name in OS/2? If this is a desktop, *(continues)*

Picture Permanent.

Brilliant Color Output With IBM® Compatibility.

If you're looking for an easy-to-use color printer that delivers fast, high quality color output, with full IBM compatibility, look at the G330-70 from Mitsubishi Electronics.

A built-in video interface enables the G330-70 to create a permanent copy on glossy paper or transparency film of any image viewed on your computer monitor.

With 150 dots per inch resolution, the G330-70 is ideally suited for presentation graphics, paint-type graphic art and PC CAD. It operates smoothly in several PC environments, including the IBM PC/XT/AT and compatibles, IBM PS/2™ or the Apple® Macintosh™ II. The G330-70 can print the screen displays from popular graphics boards, including CGA, EGA, VGA and Mac II.

For fast, bold, brilliant color output directly from your monitor, specify the Mitsubishi® G330-70. At a suggested retail price of \$5900, the G330-70 offers the most convenient method for high quality color output.

For product information or nearest authorized Mitsubishi Electronics sales representatives, please call 1-800-556-1234, ext. 54R. In California, call 1-800-441-2345, ext. 54R. Mitsubishi Electronics America, Inc., Computer Peripherals Division, 991 Knox Street, Torrance, CA 90502, (213) 217-5732.

The G330-70 color thermal transfer printer produces a full-color 8½" x 11" page or transparency in about 80 seconds.

Intel announces

Announcing the first non-stop communications route between businesses anywhere in the world.

Intel's Connection CoProcessor.™

It's a whole new way to send and receive programs, files, text, graphics and electronic messages. Not just between PCs, but with fax machines as well.

The Intel Connection is a new communications coprocessing board that frees your PC from the task of communicating.

Which means you can work on your computer non-stop — even while

sending a document as big as the New York phone book.

Now your faxes or files can fly cross country. And you can still be zooming around in your flight simulator. Or writing that letter to your biggest account. Or recalculating your spreadsheets for tomorrow's meeting. Without interruption or downtime.

And when you fax, there are no more stopovers at the printer, or cooling your heels in line at the fax machine. Because Connection lets you do everything without leaving your PC. And when you send files directly to

non-stop flights.

another Connection-equipped PC, you won't have to fiddle around with modem parameters or protocols. Because the Connection CoProcessor sets them for you. At 9600 bps.

Best of all, Connection supports CAS,* a new communication standard that is supported by major software and hardware developers like Ashton-Tate®, Borland®, DCA®, Microsoft®, and WordPerfect®. Which means you can send, for example, a word processing file to your London office, without ever exiting your WordPerfect program.

You just send the document directly from your application. That's it. There isn't any complicated

communications software to learn.

And everything is backed by toll-free technical support and a five-year warranty from Intel.

So what are you waiting for? Call 800-538-3373 now for a free demo disk.

Because with Intel's Connection CoProcessor, communication is really going to take off.

intel®

where are my file folders? If this is a graphic interface, where are the icons to help me see the differences between different files? Why can't I label my files the way I label folders sitting on my desk? Where are the in- and out-boxes, the file drawers, and the trash can?

If people keep asking those kinds of questions, perhaps we will begin to see the kind of user-interface innovations presented in some of the more obscure interfaces that most of us will never see. For instance, Hewlett-Packard implemented an interesting notion called "compound documents" in its *NewWave* interface. This means that if you copy a portion of a drawing document into a word processing document, when you

put your cursor into the drawing portion of the new document, the drawing software puts itself in memory and becomes available to you. So you don't have to remember where the software is or what it's called.

Another interesting innovation that is part and parcel of the Xerox interface is the belief that sending documents to another person should be as natural as (and a heck of a lot easier than) dropping them in an out-basket. That is literally how it's done: Click on the icon for an object, drag it over to the out-basket icon, and let go. If the system can't figure out who you're sending it to, it asks you for a name or an address. If the icon happens to be a printer or a facsimile machine, then the document gets translated to the appropriate format and sent.

The newest version of Tandy's *DeskMate* interface assumes that the system, not your application, should contain the ability to correct your spelling, wherever it is that you're spelling something—whether in a file name or a data base program or a spreadsheet. When technology is able to do that right, a logical extension will be for the system to also provide some advice on grammar and usage. Another idea, used first in *NewWave* and adopted recently by the Macintosh, is that the system should contain a macro recorder, giving you the ability to automate simple processes.

When you hear Microsoft and IBM proudly proclaim that the Presentation Manager is derived

The Bus Stops Here!

Introducing Wells American's CompuStar® Multi-Bus Business Computers.
The world's first and only multi-processor, convertible bus™ microcomputers.

Ask any computer expert about what type of system you should buy nowadays and you'll likely get a "pass the bus" response. Something like — "Well, uh, the PC/AT* bus is your best buy but, then again, the new PS/2* bus may become the next industry standard." Great advice, right? If trying to decide on a processor weren't tough enough, now you're expected to pick a bus, too.

The all new CompuStar® from Wells American not only lets you interchange microprocessors, you can also mix and match buses — a PC/AT bus, a PS/2 bus or... both. As your computing needs change, simply snap in a new processor or add an extra bus. You'll never again have to worry about buying the *wrong* computer system!

The CompuStar can be configured with any of four microprocessors — an 8086, an 80286, an 80386SX, or an 80386. The processor and up to 16 megabytes of user memory have all been combined, using the latest VLSI technology, on a single, plug-in CPU module. Plus, any time during the first year of ownership, CompuStar users can "trade-in" the CPU module they initially selected toward the purchase of any of the other more powerful modules. *Nobody* but Wells American gives you this kind of value.

No, we're not. In fact, it may well be the most practical microcomputer innovation ever. Say you've selected an AT compatible CompuStar and later want to add PS/2 compatibility. No problem! Snap in a PS/2 Bus and Adapter Module and you can use *both* buses in the same system. Likewise, if you've selected a PS/2 compatible CompuStar and decide you want to add an AT bus, just snap in an AT Bus Module. Depending on configuration, the CompuStar can have up to 13 bus expansion slots — all AT slots, all PS/2 slots or a "split-bus" of AT and PS/2 slots. Best of all, you can reconfigure your CompuStar whenever you want.

\$1995

The CompuStar is also easily expanded. That's because there are *seven* CompuStar disk/tape compartments — six accessible from the front and an additional full-height bay inside. All this in a sleek, compact tower design that actually leaves *more* room on your desktop than any of the so-called "desktop" models.

The CompuStar® Multi-Processor, Convertible Bus™ Microcomputer. It's no surprise that our engineers invented it. After all, we've been making microcomputers longer than anyone else... even longer than IBM! And if that kind of experience doesn't impress you, CompuStar's service programs surely will. You can select an optional overnight module swap-out plan or on-site service from General Electric Corporation — one of the most respected names in consumer electronics. And, of course, every CompuStar carries a full one-year factory warranty.

Think all this technology sounds expensive? It's not. CompuStar 20MHz 80286 systems start as low as \$1995†. There are also inexpensive 8086 and powerhouse 25MHz 80386 systems available. Plus, there is a wide variety of CompuStar display, tape and disk options including a one gigabyte erasable optical disk. You can choose a factory preconfigured CompuStar or custom design one yourself. Just unlock the front panel and literally "snap-in" a bus, CPU or disk module in a matter of seconds. It's system flexibility never before available... at any price.

While one of our competitors (we won't mention any names) threatens you with "missing the bus," most simply pass the bus. Our new CompuStar however, *eliminates* the bus problem altogether. Not to mention the processor problem. Even the expansion problem. Prove it to yourself. Call today about our CompuStar 31-day trial offer. Oh, and by the way, the next time anyone asks, tell 'em you know where the bus stops.

A clear line separates us from the competition.

For clear, clean transmission even over the noisiest phone lines, choose the Acer 2424 modem with Microcom Networking Protocol™.

This fast 2400 bps modem is available in both internal and stand alone versions. And it's just part of a full line of modems that speak to all your communication needs.

Want the "best bps per dollar ratio in a 2400 bps modem"? That's what PC Magazine calls the Acer 2400/PC modem. When compared to the Hayes® Smartmodem 2400™ running at 2400 bps, PC Magazine found "... the Acer modem was clearly superior."

But maybe you want PS/2™ compatibility also. Then the clear choice is the Acer 2424/MC modem with the same fast 2400 bps performance.

And for the best price/performance ratio at 1200 bps, you're talking the stand alone Acer 212A modem or the in-board Acer 1212PC modem.

All Acer modems come with BitCom software™ and are fully Hayes compatible, so they work with Smartcom III™, Procomm+™ and Crosstalk®. And they're all backed by a one year warranty from Acer, the value leader in personal computers and peripherals.

Acer modems purchased with any Acer system also receive full service and support from TRW™. On-site and nationwide.

So if you're tired of hearing static from other modem manufacturers, give us a call at (800) 538-1542. In California, (800) 782-1155.

TOPS®

A Sun Microsystems Company

"I first became acquainted with TOPS® when one of my friends in R & D gave me a copy of it. I brought it home, connected my Macs and PCs, and really liked it. At that point I became a fan... Now we use TOPS in work groups throughout the office."

"One of the big advantages of TOPS is that it actually makes connectivity between different operating systems pretty simple. Macs and PCs can be connected using simple phone wire, and you can also connect to Sun™ workstations."

"We use TOPS with our multi-user database manager, Paradox™...and the LAN version of our spreadsheet program, Quattro™. We love its ease of use and intuitive interface."

"But even more important is its pricing edge. I think TOPS is a great idea. I'm surprised I didn't come up with it myself."

— Phillippe Kahn, Founder & CEO,
Borland International

Our newest soft
like the software

ware works just you're using now.

We've always thought that one of the biggest problems with personal computing is that a computer doesn't process information the same way that a person processes information.

And in the struggle between the two, the computer usually wins.

Enter the Lotus® Agenda® personal information manager.

Agenda's flexible design lets you dump facts and ideas into your PC without structuring them in advance.

You can arrange the information any way you want. So you can gain insight, formulate new ideas, and find answers you need. And as a result, manage projects, people and information better.

How does Agenda work? First, enter items of information into Agenda.

Then create categories where you want all the information to be filed.

Introducing Lotus Agenda

Voilà. Agenda will do all your filing automatically. And if an item is relevant in more than one place, Agenda will put it in several categories at once.

What's more, if you change an item

anywhere in your file, all other categories that have the same item will also change automatically.

A TRIBUTE TO THE 24-PIN PRINTER

The Citizen™ Tribute™ 224 is all the printer your customers will ever need. For virtually any application.

It's today's 24-pin, high-performance solution for superb word processing, spreadsheet, graphics and data processing applications. And its exceptionally affordable price makes it very easy to sell. While still realizing an attractive profit margin.

Your customers receive true letter-quality printing at 66 cps, correspondence-quality at 132 cps, and drafts at 200 cps (at 10 cpi). In standard or proportional spacing. Even optional IC cards that enable character fonts and emulations to be easily expanded.

That's not all. The 224 features high-resolution graphics. Convenient front panel controls. An automatic paper loading system. And both serial and parallel interfaces.

The Tribute 224 is also compatible with industry-standard 24-pin dot matrix and daisywheel printers. So it runs with virtually every popular software package. And it's backed by excellent support materials to insure quick sales.

For more information, call 1-800-556-1234, Ext. 34. In California, call 1-800-441-2345, Ext. 34.

The Citizen Tribute 224. You can't offer your customers a higher tribute.

Keys to IBM's Future Success

We are all taught to learn from our mistakes,
but there is much that IBM can learn from its
successes.

Simply put: Don't look back.

**William
F. Zachmann**

In times past, the name IBM was synonymous with the computer industry. IBM was the only game in town, and its identity was built solidly on technological sizzle and market leadership. But the giant has been slipping lately, and stooping to some pretty unappealing tactics to retain its leadership position: By insisting on building and promoting proprietary, closed systems, IBM is trying to recapture its glory days. It's a strategy that dooms IBM to remain mired in the past.

The proof, as they say, is in the pudding. In 1985 and 1986 IBM suffered its first two consecutive years of declining earnings per share since the Great Depression of the 1930s. Its modest increase in earnings in 1987 owes as much to higher foreign earnings from a weak dollar and to a lower tax rate at home as to any real improvement in results.

According to IBM's annual report, in the workstations revenue category (which primarily consists of personal computers, though it also includes terminals and whatnot), IBM actually had over a billion dollars *less* revenue in 1987 than in both 1985 and 1986. So despite IBM's self-proclaimed "success" with the PS/2, bottom-line results were so-so at best.

IBM's PS/2 Micro Channel Architecture (MCA) has turned out to be more a creation of advertising hype than of engineering excellence. More than a year and a half after its introduction, the MCA has yet to demonstrate any real advantages in either performance or function.

The fact is, IBM has a lot of problems that aren't going away. The dominant position that it has long held in the computer industry is fundamentally threatened. That is not, however, because personal computers are the source of IBM's largest revenues or biggest profits. Large mainframe systems hold that distinction. Rather, it is because the market for personal computers most directly displays IBM's deepest and most severe challenges for the 1990s.

Personal computers stand at the forefront of the transition away from the proprietary mainframe and minicomputer architectures of the past toward the increasingly standardized world of the future. The economics of the industry are shifting away from limited competition and semimonopolistic pricing. IBM, the most successful vendor in the old environment, must change
(continues)

drastically if it is to continue to be successful in the new.

IBM's response so far has largely been to try to roll back the changes that are revolutionizing the market. The PS/2, the MCA, OS/2 Extended Edition, and IBM's aggressive defense of "intellectual property rights" in patents and copyrights are all part of its effort to return to the proprietary architectures of the past—and to the control of the industry that proprietary architectures gave it. At the same time, IBM is trying hard to turn personal computers back into peripherals, albeit very smart peripherals, of the mainframe. The idea is to lock users in.

But it isn't going to work. The PS/2 and the MCA offer no real advantages over competitive of-

ferings from other vendors. OS/2 Extended Edition is an overpriced underperformer that won't even run on most of the systems currently in use, including most of the PS/2s IBM has sold so far. Most users are much too smart to permit themselves to be led back into IBM's proprietary corral.

The sad part about all this is that IBM doesn't have to follow a regressive road in order to be successful. The key to IBM's future isn't in trying to turn back the progress of history and technology but in adopting strategies that will succeed in the new environment. IBM needs to take forward-looking action, as it did in the mid-1950s in response to Univac's early success with computers; or in 1964 with the introduction of its IBM System/360, a line of processors as consistently

integrated for its time as the Digital VAX has become in the 1980s.

In fact, IBM has a tremendous initial advantage over competitors. Despite recent setbacks, IBM's reputation remains good. And most buyers are willing to pay more for a product from a company with a good reputation. Compaq, a mere whippersnapper in the industry, has built a reputation for quality that commands premium prices in the market. IBM can certainly do as well.

The problem, however, is that IBM seems to be preoccupied with finding ways to return to a more proprietary architecture instead of with finding ways to build a superior product at the best possible price. Obsessed with preserving the high mainframe profit margins that it has

The image shows four IBM Diamond Scan monitors arranged in a row. Each monitor displays a different image: the first shows a fish, the second shows a building, the third shows a satellite dish, and the fourth shows a mechanical assembly. Below each monitor is a caption describing its specifications.

A Clear View To Monitor Quality

come to expect, IBM is living in the past. That's no way to run a company in the 1990s.

A blatant example of this shortsightedness is IBM's approach to its excellent RISC-based RT computer system and UNIX. Appropriately packaged and priced, the RT would without a doubt be IBM's most competitive midrange offering, filling the role of both network server and departmental processor. Its speed and I/O capabilities would make it a natural winner in such a role.

Instead, IBM promotes the RT simply as an expensive, high-end workstation for scientific and engineering applications. Even though the new models last summer improved on the RT's so-so floating-point performance, the RT is really best suited as a general-purpose business processor.

For departmental and file server applications, it could be highly competitive with less powerful Intel 386 and Motorola 68030 systems from other vendors.

IBM has so far been unwilling to aggressively position the RT for the markets where it has the greatest potential. The company is too concerned with promoting the less suitable but more proprietary 9370 (for larger organizations) or the AS/400 (for small and medium-size businesses) to let the RT fulfill its potential. IBM is still reluctant to admit that the UNIX-based operating system of the RT, AIX, is relevant outside the narrow world of technical computing (and government contracts that require it).

An analogous shortsightedness occurred with local area

networks. If IBM had embraced and supported Ethernet as a standard in 1981 when it was introduced by Intel, DEC, and Xerox, IBM would dominate the local area network market today. An IBM ethernet would have achieved a much larger market share than has the IBM Token-Ring. IBM's insistence on doing it differently confused and thereby retarded the market, ultimately diminishing IBM's influence on local area networks in general.

Repeating mistakes like that is not the way for IBM to maximize its prospects for success in the new era of information systems. IBM ought to take a leadership position supporting standards; it ought to further reduce corporate overhead to become
(continues)

Only one supplier of color monitors offers the widest selection of features and operating flexibilities in the market today.

That company is Mitsubishi Electronics.

Mitsubishi® delivers the reliability and performance that can meet your color information display requirements today as well as tomorrow. Larger screen sizes, truer colors, and optimum resolutions make your work easier—and far more productive.

Whether your requirements call for fixed-frequency graphics standards, like EGA and VGA, or multiple-frequency performance, Mitsubishi has the color monitor

with the resolution and size to fit *your* specific needs. This includes the Diamond Scan Series of 14", 16" and 20" auto-tracking monitors, some with microprocessor-enhanced programmable display settings. All at very competitive prices.

To get a clear view of monitor quality and value, look to Mitsubishi.

For product information or nearest authorized Mitsubishi Electronics sales representatives, please call 1-800-556-1234, ext. 54M. In California, call 1-800-441-2345, ext. 54M. Mitsubishi Electronics America, Inc., Computer Peripherals Division, 991 Knox Street, Torrance, CA 90502, (213) 217-5732.

truly price competitive; and it ought to concentrate on building the best possible products instead of finding ways to build more proprietary products. If it does all these things, IBM will continue to play the dominant role it has long enjoyed in the industry. If it does not, IBM will join the buggy-whip manufacturers and the railroads as a monument to the failure of keeping up with change. ●

William F. Zachmann is senior vice president at International Data Corporation.

POWER TIP NO. 18

Use Backspace to List 1-2-3 Directories

Have you ever selected File Retrieve in 1-2-3 release 2 and then realized that the file you're looking for isn't in the current directory? To change directories you could type in the path name for the file or use the File Directory command. Instead, try pressing <Backspace>. This lists all the subdirectories and .WK1 files in the current directory and may enable you to find the file you want quickly. In fact, each time you press <Backspace>, 1-2-3 will display subdirectories and .WK1 files in each directory all the way back along the path to the root directory.

**Database Management Systems:
The key to the future of computing.**

A strategy for the next generation of computing.

Information management in corporations is changing. In contrast to the historical mainframe and minicomputer emphasis, micros are becoming the focal point for future computing systems. The PC has given end-

productivity while working from a familiar PC application, workgroup computing has become a natural extension of the user's individual PC environment.

Ashton-Tate provides the ideal end user solution for today's needs with dBASE IV™ and the dBASE/SQL language. This solution is the foundation for the integrated office of the future.

INFORMATION MANAGEMENT SYSTEMS ARE EVOLVING TOWARD AN END USER FOCUS

users a low-cost, easy to use data management solution that provides power and control over the user's data. Sophisticated applications have enabled the PC to be used as a key data management tool for individuals.

High volume data storage, retrieval capabilities, and limited end-user interactivity make mini and mainframe computers more suitable for production-oriented tasks. Display intensive applications required for interactive personal management have been best addressed by individual PC workstations.

As individual PCs become more prominent business productivity tools, sharing a common data pool within a workgroup of individual PCs has emerged as a new user need. Driven by the user's interest in increased

The need to share data extends even beyond the workgroup to the corporate database on mainframes and minis. Users are demanding transparent access to corporate data residing in many different database types across multiple platforms while still retaining the highly productive personal data management solution at the workstation.

Central to these trends is the database management system. It is emerging as the key foundation of all information processing and the pivotal integrator for meeting users' and corporations' information management needs.

Just as the microcomputer is the focal point for future computing, the database will be the central repository of all information. And as the leader in microcomputer DBMS technology,

The solution.

Ashton-Tate provides the most comprehensive database solution for meeting the needs of all users from the first-time user to the professional developer. Working at an individual PC workstation, in a workgroup or accessing corporate databases, dBASE IV provides a clear migration path toward the integrated office of the future.

The Ashton-Tate® database solution is based on the concept that users want to work from a set of highly integrated and usable database tools — regardless of their location, operating system or database type. They require the flexibility to access many different databases across key operating system platforms. And want that access to be both immediate and transparent.

The design of dBASE IV takes into account the changing structure of the workplace.

It is the ideal PC database from which users can share data in a workgroup and transparently access corporate data when combined with the Ashton-Tate/Microsoft SQL Server and Ashton-Tate connectivity solutions. MIS maintains control of the data while the individual gains greater usage and flexibility in their familiar PC environment. Ashton-Tate's database solution provides businesses with the assurance that they can leverage their application and database investments. Businesses want the best and most cost-efficient platform for the application while keeping training and support costs for end users to a minimum.

The foundation.

With dBASE IV, Ashton-Tate has created a foundation for

your future business data management needs. dBASE products are the standard and the preferred workstation solution in application development and personal data management. dBASE IV and SQL Server in combination provide the ideal next generation client/server workgroup computing environment. Users will have the flexibility of accessing many different types of databases both in the LAN server environment and remote hosts via intelligent micro- and server-to-mini/mainframe links.

The foundation for this solution is the dBASE/SQL language. It is the only language that combines the comprehensive application environment of dBASE software with the common data access language of SQL as a key foundation component for your connectivity solution.

USER ENVIRONMENT	SOLUTION	BENEFITS
Workstation	dBASE products are the standard in micro application development and personal data management. Versions will be provided for DOS, OS/2, Macintosh, UNIX and VMS providing comprehensive coverage with leadership in usability and productivity.	Superior interface and tools for application development and interactive productivity that is 100% compatible across operating system platforms to leverage your data and application investment.
Workgroup	Leadership in next generation database server solutions with the flexibility of accessing heterogeneous (different) back-end servers across OS/2, Macintosh, UNIX and VMS operating systems. Continued leadership in file server solutions for low cost, easy to use multi-user requirements for DOS and OS/2.	Highest performance and compatible solution with dBASE IV as the front-end and SQL Server as the back-end. Ability to utilize the best back-end server to optimize application processing.
Heterogeneous Mini/MF Connectivity	Access to heterogeneous (different) database types on mini and mainframes from dBASE for retrieval and optional updating across a wide range of operating systems.	Transparent access to your corporate data from a consistent and familiar dBASE interface to most effectively utilize your corporate database investment.

The driving force.

With more than two million end-users of dBASE products and tens of thousands of third-party applications written in the dBASE® language, dBASE products are the standard by

which all other products are measured...and written to. And with dBASE IV, Ashton-Tate continues to challenge itself to reach a new standard of functionality and integration in the business environment.

The next step.

Now, with dBASE IV and dBASE/SQL, Ashton-Tate provides the next generation database management system foundation for end-users.

A look at dBASE IV: You mean it's this easy to do all this?

You look to database software to organize, coordinate and add some discipline to your job performance. You expect it to miraculously transform your inventory or sales information into an intelligent pathway for business direction. You expect it to be easy. Then, you sit down to try to use it. And what you find is often somewhat less than inspiring...and just plain too hard to get it to do what you want it to do.

Ashton-Tate based their product development on feedback from users. dBASE IV's completely new, intuitive user interface — the Control Center — allows you to perform tasks with simple to use pull-down menus and logical task-oriented tools - all without delving into the more complex function of programming.

As a first-time user of a database management system or as someone who breaks into a cold sweat when the word "programming" is mentioned, you gain access to the sophisticated organization and retrieval of information that used to be left to someone else to provide for you. You'll be off to a fast start with dBASE IV's on-disk tutorial. And context-sensitive, on-line HELP is available to answer all your questions.

Query-By-Example (QBE)

Query-By-Example makes it easy to extract, view and manipulate selected records from a database. You specify the record selection criteria by entering simple phrases in the query design screen. Or, you can use pull-down menus for even greater ease of use. With QBE, you can extract data from several files simultaneously, in a single operation. No knowledge of the dBASE/SQL programming language is needed.

Problem:

You just completed a record-breaking sales quarter. You need a report that combines several criteria in the same file to show all sales over \$20,000 within California during the past 3 months.

Solution:

Select "create" under Query in the Control Center and use the pull down menus to select the database files you need. With the QBE screen in front of you, go to the sales field and type in "> 20000". Then go to the state field and type "CA", and then to the date field and type "> {01/01/88}". Hit the DATA key (F2) to see your results.

Layout	Fields	Condition	Update	Exit
Sales.dbf	ORDER_NO	ISALE_DATE	STAFF_NO	
		> {01/01/88}	LINK1	
Staff.dbf	STAFF_NO	LASTNAME	FIRSTNAME	
	LINK1			

View	Fields	Condition	Update	Exit
Untitled	Sales-> ORDER_NO	Sales-> SALE_DATE	Staff-> LASTNAME	Staff-> FIRSTNAME

Query: D:\dbase\ddata\NEW File 1/2
Next field:Tab Add/Remove all fields:F5 Zoom:F9 Prev/Next skeleton:F3/F4

Forms Manager

Using a full screen work surface, you can lay out full-color forms for data entry, modification or viewing. It's as quick and easy as drawing them on paper. When specifying data entry forms, you can take advantage of dBASE IV's enhanced data entry capabilities to reduce data entry time and errors. Once you specify a form, dBASE code is automatically generated to describe it. You can recall forms for later use, quickly modify them with the new editor and include them in turn-key applications.

Problem:

You just finalized the major account contracts for the next year and you want to set up a customized form to update progress against annual and quarterly goals.

Solution:

Select "create" under Forms and use the Quick Layout feature of the forms manager. All the fields are immediately placed on the screen. Lay out the form with the box and line drawing capabilities and block copying and moving. With a few keystrokes, add color codes and set up multiple choice options for each question. This saves time and reduces margin for error because all you need to do is hit the spacebar or first letter of the answer when filling in the form.

From a single screen, the Control Center gives you control of all the powerful facilities of dBASE IV: File Creation, Query-by-Example, Forms Manager, Report Writer, Label Writer and Application Generator to the level that you need. This next generation user-interface lets you accomplish your data management tasks quickly, whatever your experience level.

Report Writer

Whether you're generating simple columnar reports, filling in pre-printed forms or producing mail merge documents, laying out a report format is a snap with the dBASE IV Report Writer. Using a full screen work surface, you can lay out report formats. Repeating information, such as page headers, is easy to handle and you can take full advantage of your printer's special features such as underlining and boldface text.

Problem:

You need to quickly summarize accounts by state, with subtotals, for the Executive Committee meeting.

Solution:

Enter the dBASE IV Report Writer and select the Quick Column Layout. In the page header band, type in the title of the report and draw a box around it. The fields are already laid out. For subtotals, select ADD A GROUP BAND from the pull-down menu. Move to the summary band and type "Total number of accounts" and add a summary field. The report is complete and ready to print.

dBASE IV Applications Generator

Once you've created the files, forms, queries, reports and labels you require, you can use the dBASE IV Applications Generator to tie them together into a turn-key application. You can add sign-on banners, pull-down or pop-up menus with the powerful menu editor. The Applications Generator writes menus with the powerful menu editor and writes all the necessary dBASE code for you. To get your job done even faster, the "Quick Application" facility provides default application designs so you can develop complete applications in minutes.

Problem:

You've been asked to create a system to track the top 25 accounts based on a special database, form and reports that you've already created, and it has to be done before Monday.

Solution:

Enter the Applications Generator and create a menu which lists the different types of reports. Assign the proper report to each option and select the "Generate" option which generates the application for you. Immediately, you have a cohesive application which includes your file, form and reports, and you can still enjoy the weekend.

A look at dBASE IV: How far can you take this much power?

You're the one who people come to looking for answers. The last person in your position didn't have them. You've developed turn-key applications using dBASE III PLUS™. You know it's easy to create, access and update data files such as mailing lists, personnel directories or sales contacts.

You've been working with dBASE III PLUS for some time now. You tinker with other application development languages. But you find that more and more of the requests you receive for program development are all focused on data manipulation and analysis. dBASE III PLUS works great, but there's got to be more. You want an environment that allows you to develop, test and distribute database applications quickly and productively. You want more speed, fewer bugs and easier editing. You want a bigger slice of the pie with royalty-free application distribution. You want an enhanced package for data management development from Ashton-Tate.

Problem is, it's still not enough. You're at the point of looking for short cuts, time-savers and more efficient ways to create more sophisticated files. You know how to build programming code. You just have more important things to do. Like designing all those applications everybody keeps asking for.

Now, because of dBASE IV's powerful relational capabilities, you can do all those things. You can set up data management systems that involve interaction between interdependent files such as sales orders, customer data, inventory and billing. You can build networking answers with various combinations of dBASE IV, dBASE IV LAN Pack and Ashton-Tate/Microsoft SQL Server to achieve the right workgroup solution. And most importantly, you can still accomplish all these tasks without writing any programs.

And when you want to customize a program further with embedded code of your own, you can rest assured that your old familiar dot prompt is still there, supported by a built-in automatic compiler that performs significantly faster than dBASE III PLUS. And naturally, programs you already created with dBASE III PLUS will run transparently.

dBASE IV significantly increases the capabilities of the already powerful dBASE III PLUS programming language. It adds 310 new or enhanced commands to this foundation including new, powerful user-defined functions, enhanced data entry capabilities, new window and menu features, multi-dimensional arrays and high precision financial, numerical and statistical functions.

dBASE IV offers a full implementation of IBM's SAA compatible Structured Query Language, the advanced relational database language rapidly emerging as the corporate standard for data access. SQL's set-orientation allows the user to perform complex relational operations with a single command.

And if you are a database applications developer, dBASE IV's Developer's Edition offers a complete database application, test and distribution environment that meets all your requirements.

The advanced program debugger operates with multiple windows. Because it works closely with the built-in editor, which runs in one of the windows, the user can quickly edit and change programs interactively as error conditions occur. And, the fixes can be permanently saved.

You've written a very sophisticated program with many different modules and a large number of variables and the results are not correct.

With the Advanced Debugger, you can interactively set up breakpoints to check the values of your variables to quickly determine the problem. You can monitor the variables as they change in the Display window and the built-in editor lets you edit and change programs as errors occur.

dBASE IV includes many built-in, multi-user features for both the end-user and application development environment. These features include single-user to multi-user transparency, transaction processing, automatic screen refresh and password protection and data encryption. You can easily develop applications that allow any number of end-users to access information simultaneously from a common database without fear of data loss. And you can add capabilities such as Transaction Processing.

Six people in your department need to access the Account Maintenance database. Three will be entering data, two will make changes and the other will run the reports.

With one dBASE IV and a dBASE IV LAN Pack, you have a six user LAN setup. Placing the Account Maintenance database on the LAN Server will allow all six people to access the database. Automatic record locking ensures integrity, and auto-refresh ensures that users are always looking at the most current data.

Delivering the tools to the workstation.

The strength of any vision is to take what is known and expand the possibilities. Ashton-Tate provides the foundation for your business data management needs today, building toward the future. dBASE products are the standard in micro application development and personal data management on DOS. Versions will be provided for OS/2, Macintosh, UNIX and VMS platforms as well, providing leadership in usability and productivity through comprehensive platform coverage. With the introduction of dBASE IV, Ashton-Tate continues the momentum and moves forward into the next generation.

dBASE IV.

dBASE IV is the next generation that provides levels of ease of use, speed and power with a combination of features never before available for personal computer users.

The Control Center is the next generation interface that makes your job easier by letting you access all the power without programming for personal data manipulation. Involving interactive queries, reporting and data manipulation, dBASE code is automatically generated and a built-in compiler automatically compiles your application for execution speed significantly faster than dBASE III PLUS.

dBASE IV represents the latest generation of the dBASE family and builds on the industry standard language features of this relational database by adding over 310 new and enhanced dBASE commands and functions. In addition, dBASE IV offers a full implementation of IBM's SAA-compatible Structured Query Language (SQL) bringing unparalleled power and flexibility to the programmer for improved productivity and extendibility for future connectivity solutions.

dBASE IV Developer's Edition.

For the developer, this edition provides the complete dBASE IV software with additional programming tools, utilities, two additional LAN keys for multi-user testing, and a royalty-free application distribution module to provide the most complete environment for application development, testing and distribution available.

RapidFile.

RapidFile® is the economical entry path to Ashton-Tate's database product line. It is a fast and easy-to-use file manager for lists, labels, reports and form letters. RapidFile is specially designed for novice to experienced users who want to manage lists of information quickly and easily, but who do not need relational capabilities. Upgrade pricing is available from RapidFile to dBASE IV.

dBASE III PLUS.

The industry standard will continue to be provided for users who have lower memory requirements or dual floppy systems. Applications developed in dBASE III PLUS are 100% upwardly compatible to dBASE IV, thus ensuring continued support of your investment to minimize cost and save time.

Future versions.

Leadership requires an understanding of user demands and the ability to develop an appropriate solution for them. Ashton-Tate's leadership is founded in their dedication to meeting users' needs for application portability and a common interface across key operating systems to leverage their workstation investment now and in the future.

ASHTON-TATE FUTURE DATABASE DIRECTIONS

Character-based Interfaces	dBASE Control Center dBASE/SQL DOS	dBASE Control Center dBASE/SQL OS/2 1.0	dBASE Control Center dBASE/SQL UNIX	dBASE Control Center dBASE/SQL VMS
Graphics-based Interfaces	Presentation Manager dBASE Interface/Tools dBASE/SQL OS/2 1.1	Macintosh dBASE Interface/Tools dBASE/SQL Multi-finder	Open Look dBASE Interface/Tools dBASE/SQL UNIX	DEC Windows dBASE Interface/Tools dBASE/SQL VMS

Ashton-Tate will be delivering future versions of the industry standard dBASE products with the familiar character-based Control Center interface on DOS, OS/2, UNIX and VMS with guaranteed application portability. This new environment will allow its users to select the best hardware and operating system for their own applications with the assurance that they can leverage their investment in the future.

Future versions will include a graph-

ics-based interface for next generation ease of use and utilize the new functionality of the OS/2 1.1 Presentation Manager. This graphics-based interface will be the foundation for future solutions under Macintosh, UNIX Open Look and VMS DEC Windows. These are the kind of solutions that will maintain Ashton-Tate's leadership in microcomputer relational database management systems and extend that leadership to new platforms.

Leadership in workgroup computing.

The first PC-based workgroup solutions were file server LANs with each workstation having its own processing power for greater personal computing flexibility plus file sharing — at a more economical cost than multi-user minicomputers. However, file servers did not provide the transaction processing performance, data integrity, crash recovery and central data management control typically provided by a minicomputer database.

Minicomputer databases suffered from the high cost of application development and maintenance, limited customizability, limited individual productivity and lack of user-friendly interfaces. It was difficult to build a minicomputer solution that fits the needs of today's end-user environment.

A need clearly surfaced for a synergistic approach that could combine the capabilities of the minicomputer database with the benefits of the familiar workstation database. The result would be dramatically improved performance, while retaining centralized control and better data integrity at a lower cost.

The next generation workgroup solution.

Database servers based on a client/server architecture provide a superior solution as the next evolution of database management systems for workgroup computing. Unlike a file server, a database server has database processing power of its own. The database server's processing power also offers the benefits of the minicomputer-based network (performance, integrity, administration and concurrency) at only a fraction of the cost. As a result, processing can be split to be more effectively distributed between the server and the LAN workstations. The Ashton-Tate/Microsoft SQL Server is a database server that will provide the benefits of a distributed

processing environment. With its roots in the more powerful environments of minicomputers, its heritage provides the opportunity to build a product that offers the best of both worlds.

The structure behind the change.

SQL Server is a major breakthrough in workgroup computing. Based on an advanced model called a Client/Server Architecture, the client/server model segments database operations and exploits the strengths of each system component. When SQL Server is teamed up with Ashton-Tate's dBASE IV, the combination creates the best solution for workgroup computing needs now and the next evolution for future data management systems.

CLIENT/SERVER ARCHITECTURE

The back-end ("server"), SQL Server, handles data input/output and transaction processing activities using large and high band-width data storage devices. The server delivers the benefits of traditional on-line systems — database level security, transaction processing and production database power, sophisticated data sharing and high system availability.

As the front-end ("client"), dBASE IV provides the power and ease of use of a highly interactive personal data management system and access to all the applications. Running on PCs over local area networks, the combination

replicates all the data integrity, performance and superior security typically associated with mainframe and minicomputer DBMS — at a fraction of the cost. All while maintaining the integrity of a central database management system. SQL Server also offers other features like server scalability which lets you add more or larger servers to a workgroup and is an open platform for applications written in other languages.

From an application development perspective, dBASE IV offers significant advantages over other client solutions utilizing 3GLs like Cobol and C languages. The dBASE/SQL language in dBASE IV with its highly integrated WYSIWYG (What You See Is What You Get) tools provides a more productive and easy-to-use environment for application development, testing and distribution.

Building cooperation.

In the future, dBASE workgroup computing will offer several alternatives for the user and provide the greatest flexibility for true office connectivity through shared database resources. Users will have the flexibility of choosing SQL Server as today's back-end of choice for database server capabilities, selecting the LAN Pack file server configuration for simple multi-user sharing of data for a low-cost situation with minimal application requirements, or in future versions accessing other database servers as they become available from vendors such as IBM and DEC. Ashton-Tate is committed to providing access from dBASE products on the workstation to future database servers on UNIX and VMS-based minicomputers.

The key for growth is being able to select the computing platform that best meets your application processing needs and utilize your data and application investment to minimize your costs.

IT'S NO WONDER PEOPLE THINK OF US AS THE dBASE COMPANY.

We did, after all, pioneer what has become the most widely-used database management system for personal computers on the planet.

While at the same time adding a full complement of Ashton-Tate® products that enhance the dBASE® standard even further.

Products like dBASE IV™ Developer's Edition, which gives you a complete set of programming tools, utilities, and royalty-free run-time distribution.

dBASE IV LAN Pack, adding as

many as five simultaneous users to your dBASE IV installation in a networked environment.

CHART-MASTER®, which makes the production of business charts and graphs using dBASE data as easy as pie. Or as bars. Or lines.

RapidFile™, a fast and easy-to-use a file manager designed for business people who work with lists, mailing labels, and form letters.

And dBASE DIRECT/36™ and

dBASE DIRECT/38™, which let you transparently access system 3/X data as if it were on your PC.

Naturally, you'll find the highest degree of compatibility among all the products in the dBASE family—from being able to share files between CHART-MASTER and RapidFile, for example, to having all of your dBASE III PLUS™ applications automatically run in dBASE IV.

All of which reinforces dBASE as the industry leader.

But then, it's really no wonder.

ASHTON • TATE®

IT'S A WONDER PEOPLE THINK OF US AS THE dBASE COMPANY.

We do, after all, offer one of the most complete and advanced product lines of any software company on the planet.

Products that go beyond those in our flagship dBASE® environment to set standards for power and performance in other areas as well.

Areas such as presentation graphics, where DRAW APPLAUSE™ takes your text and data and transforms them into impressive charts and graphs. And where BYLINE™ lets you be a desktop publisher—even if you're not.

Areas like integrated software,

where FRAMEWORK III™ lets you bring all your work—from spreadsheets, databases, and text documents—together in a single, cohesive, and intuitive workspace.

And finally in the Macintosh arena, where FullWrite Professional™, a tool that combines powerful word processing and page layout capabilities, is quickly establishing itself as one of that environment's leading products.

As is Full Impact™. A presentation spreadsheet that gives you the ability to transform your data into clean, crisp, and understandable documents.

And dBASE Mac, a powerful database with the sophistication of the Macintosh.

Beyond software, we also provide a wide range of support for our customers, including publications, training, and even a fast-turnaround graphics service.

But why take our word for it? See all our products at COMDEX in Meeting Room B-3, East Hall, LVCC. You'll be just as surprised as we are that we're often seen as just the dBASE company.

It's a wonder, really.

ASHTON • TATE®

Sharing information in an expanded environment.

Access to what is known as "corporate data" (information essential to the livelihood of a company such as customer orders, inventory and accounting) has traditionally been stored, controlled and analyzed on a corporate mini or mainframe.

To date, corporations have invested a tremendous amount in their existing corporate DBMS environments. In many cases, there may be multiple DBMS program products serving different data management functions. This type of environment is described as being heterogeneous because it involves many different database types across many different platforms.

As the microcomputer increased in power and functionality, users found they could do many of the analyses MIS used to handle on the corporate mini/mainframe at their desks. Transparent access to data suddenly became a catalyst in the drive to integrate micro, mini and mainframe environments.

With the inherent accessibility problems posed by the mini/mainframe system, the micro DBMS interface has proven to be the superior solution because it satisfies the user's need for a transparent, immediate and easy-to-use approach to data management

from their workstation.

Therefore, the key in designing a viable connectivity environment lies in enabling the company to take the existing DBMS environments it now employs and connect them through common data access languages (such as SQL) and industry standard communications facilities. And at the same time, provide the end-user with a comfortable and familiar way to realize this connectivity and take advantage of it at the workstation level.

Ashton-Tate's Heterogeneous Connectivity Solutions.

The Ashton-Tate family of connectivity products will let you transparently access data and integrate dBASE applications with your current database systems on mini and mainframes. The workstation user does not have to deal with the complexities of the mini and mainframe while MIS continues to control and manage centralized database investments.

The initial connectivity products targeted by Ashton-Tate are the IBM midrange computing environments. dBASE DIRECT/36™ allows querying, manipulating and reporting on System/36 data transparently through dBASE III PLUS. dBASE DIRECT/38 provides the same capabilities on

System/38 files.

In the longer term, Ashton-Tate's heterogeneous connectivity solution is targeted to cover the IBM System/3X, AS/400, OS/2 Servers, UNIX, VMS and future mainframe platforms in a phased approach.

In Ashton-Tate's view, connectivity is represented by a variety of clients hooked to multiple servers, which in turn tap into the corporate data source, be it a minicomputer or mainframe. They also see it as intelligently linking single, stand-alone clients with corporate DBMSs through applications integration.

Two key components to this solution will be transparent data access and application integration. Transparency will allow the user to make a request of a remote data base without knowing where it is stored or how to deal with the complexities of the host database system.

Application integration will permit the PC user to directly access remote databases from within Ashton-Tate PC applications. This type of integration leverages customer's investments in mini, mainframes and PCs. Ashton-Tate's connectivity solutions will bridge the gap between dissimilar worlds.

ASHTON-TATE CONNECTIVITY SOLUTIONS

Glossary of Database Terminology

Application: A software program that is designed to accomplish a specific task. A database management program is an application, so are word processing and spreadsheet software programs. Applications software can also have a more narrow focus such as tailoring a general database management program to serve accounting or inventory management functions.

Client: Workstation software that utilizes the services of any type of server on a network.

Database management system (DBMS): A consistent method of storing, organizing, retrieving and calculating data in database files.

Database server: Software and hardware (usually a microcomputer) that operates as the designed "hub" of a local area network. This "hub" stores the network's shared database files. In addition to managing the distribution and retrieval of these files, the database server offers additional data manipulation and protection capabilities.

Database file: A file used for storing and organizing information. Some computer database files are organized in table format with information arranged in rows (records) and columns (fields).

Dataframe: A conceptual term referring to the computer system - usually a minicomputer or mainframe - a corporation employs to store information essential to its livelihood (such as sales, order entry and inventory).

Field: The smallest unit of information in a record.

File server: A common term for the software and hardware that perform the storage, distribution and retrieval functions for shared files in a local area network. The file server controls the network communication and the definition and sharing of network resources.

Heterogeneous database environments: Distinct computing platforms upon which database software is designed and operated. Each of the current platforms (there are three: microcomputer, minicomputer and mainframe) represents a different level of technology with its own methods of operation.

Links: Software tools that allow heterogeneous database management programs to share files.

Local area network (LAN): A system in which a group of microcomputers and peripheral devices are linked to-

gether (through hardware and software) to allow data and resource sharing among the members (also called nodes) of the LAN.

Multi-tasking: Procedures in which several separate but interrelated computer tasks (for example, creating a word processing document and updating a database) operate under a single program identity.

Programming language: A set of computer commands that form a procedure, or language (complete with its own syntax and structure), by which software programmers design and implement computer software programs.

Operating system: The master control program that directs the internal operation of a computer (MS-DOS and OS/2 are microcomputer operating systems).

Query: A specific request for data or instructions in a computerized DBMS.

Query By Example (QBE): A method of making database queries in a graphics manner, rather than an English-like or programmatic manner.

Record: A group of related fields of information treated as a single unit.

Relational database: A system that allows data to be accessed based on relationships set up among several database files.

Transaction processing: The running of a sequence of database operations as a single unit of work.

Transparent data sharing/access: A characteristic of advanced workgroup computing technology in which a user can retrieve and view data regardless of where it is stored within the computing environment — microcomputer, minicomputer or mainframe DBMS.

User interface: The means by which a computer and a user communicate. It is the collection of everything the user sees, hears and does while activating the computer to perform some task.

Workgroup: Best described as a corporate department or division in which computer users (usually in a LAN setting) require data access and sharing capabilities to carry out their departmental objectives.

Workstation: An individual personal computer connected to another within a network.

The language of the present and the future.

The dBASE language is the standard for DBMS applications development on the microcomputer. It is recognized as the most comprehensive and productive application development environment compared to any other micro-based DBMS language and other 3GL languages such as COBOL or C. dBASE IV further extends the standard by adding significant language functionality that far outstrips any competitive products in both its level of flexibility and productivity.

The key to dBASE IV is its integration of the language with the usability and productivity of its Control Center tools. The Control Center provides an easy to use WYSIWYG interface that gives you access to all the power of dBASE without having to deal with the language or develop programs. The synergy creates a highly integrated environment with dBASE/SQL as the integrating language foundation.

What is needed is a common way of accessing data. SQL is the emerging data access language standard. However, while SQL provides a common way of performing queries and manipulating information, it lacks the

capabilities of a complete application development environment. As a result, many companies have to rely on COBOL, C or utilize the vendor proprietary language with embedded SQL (ESQL). In all those cases, considerable expertise is required to build applications.

The advantage of dBASE/SQL is that it provides a strong programming environment that is intuitively geared to database application development. With the strong programming and user-familiarity strengths of the dBASE language and the power and data access language of SQL, dBASE/SQL is the strongest solution available today for the increased demands of database application development and an important protocol on which to build future connectivity solutions.

A natural evolution.

As business information requirements grow more complex, an appropriate integration of technologies will be critical to meet the demand. An effective combination of mini/mainframe and PC functionality must be developed to answer that need for an integrated office environment.

Ashton-Tate understands that creat-

ing efficiency and productivity in the individual, stand-alone environment is only a part of the solution. To be truly integrated into the future business environment and to be able to address databases existing on other computing systems such as minicomputers and mainframes, common protocols or languages are needed.

Ashton-Tate has laid the groundwork for a foundation that provides office solutions today and for the future in an ever-changing business environment. The effective combination of dBASE IV and SQL is just the beginning.

Ashton-Tate's intention is to evolve the language guided by three basic principles:

- Upward Compatibility - Assurance that current applications will run in future versions.
- Leadership Functionality - Extensive user need analysis will determine future extensions, including issues such as a cross-product application language.
- Greater Usability - Incorporating more visual programming techniques and object-orientation for easier use and greater productivity.

dBASE / SQL LANGUAGE FOUNDATION

Achieving a new level of integration through the database.

VIEW OF THE FUTURE

The issues discussed here — stand-alone database management software, workgroup computing, client/server models, SQL, connectivity, etc. — put computing on a path toward an integrated information system solution. The database will play the most important role in making this solution a reality.

A database system has the necessary data manipulation and data management capabilities to control and manipulate essential company data. The DBMS also provides the necessary technology to build and manage complex office applications of the future that combine, integrate and distribute the processing of multiple applications across the business enterprise.

The personal data management solution at the workstation will be the

focal point for the user. There, he will use multiple applications in a consistent environment, transparently sharing data between applications contained in a common data pool managed by an advanced DBMS. At the workgroup level, the information will be stored in a server database that acts as a central integrating element of each workgroup network. Users will store and retrieve data and objects for all their software applications in this database.

In addition, access will be available to heterogeneous database types on minis and mainframes from dBASE for retrieval and optional updating across a wide range of operating systems.

At the same time, the corporate database managers will be able to monitor

raw data flow and storage with the necessary level of control and security.

Ashton-Tate has laid the groundwork. dBASE IV is the leading technology which significantly raises the PC database standard. It is a foundation that provides office and information systems solutions today and for the future...in an ever-changing business environment.

Trademark/Owner: Ashton-Tate, the Ashton-Tate logo, dBASE, and RapidFile are registered; dBASE III PLUS, DRAW APPLAUSE, dBASE DIRECT/36 are trademarks of the Ashton-Tate Corporation. General Notice: Some of the product names used herein have been used for identification purposes only and may be trademarks of their respective companies.

Cover design: Steve Gunn and Grant Follis. Produced with DRAW APPLAUSE.

IF YOU CAN MASTER THIS KEYBOARD YOU CAN UPGRADE TO dBASE IV.

You own some flavor of dBASE® right now—dBASE III PLUS™, dBASE III®, or even dBASE II®. And you'd like to get your hands on dBASE IV,™ at a reasonable price.

We understand. Which is why we're offering registered users the opportunity to get dBASE IV at the low price of \$175* (if you bought dBASE

III PLUS between February 17, 1988 and the release of dBASE IV, your upgrade price is only \$30). There are also upgrades to dBASE IV Developer's Edition.

What if you never registered your current version of dBASE? No problem. You can do it with your upgrade order if you send us a photocopy of your system disk or your registration card.

Just give us a call at our toll free number:

1-800-2-ASHTON

(that's 1-800-227-4866) and we'll fill you in with all the details.

So upgrade now to dBASE IV. All you have to do is push the right buttons.

**Volume discounts are available; prices do not include shipping and sales tax.*

STATE OF THE A T.

ZENITH UNVEILS THE AT[®]-COMPATIBLE COLLECTION.

ZENITH INNOVATES AGAIN—Zenith's collection of AT compatibles began with the Z-386.[™] An introduction that ushered in such industry firsts as zero wait states, cache memory and slushware—for greater speed and faster memory access. Once again, Zenith's constant pursuit of innovative, user-relevant technology has created faster, better computers.

The new Z-248/12[™] and Z-286 LP[™] desktop PCs. Two new master-strokes that respond to today's need for smaller size and maximum expansion. Two more reasons why Zenith is the leading supplier of AT-compatible systems.

The compact Z-286 LP combines a four-inch low profile and space saving small footprint with performance you'd expect from a unit three times its size.

The Z-286 LP comes standard with 1MB RAM—expandable to 6MB without using an expansion slot. Generous memory capacity to run new MS OS/2[™] applications. And with a single 3.5" floppy and fast 40MB hard disk you have truly impressive storage capacity.

The Z-248/12 is among the fastest 286 systems available. Its zero wait state design magnifies its 12MHz to speed past 16MHz systems with wait states.

AT is a registered trademark of IBM Corp.

MS OS/2 is a trademark of Microsoft Corp.

The Z-248 is also standard with 1MB RAM and is expandable up to 6MB without using an expansion slot. However, four open expansion slots can artfully handle future growth. Configurations of 5.25", 3.5" floppy or 40, 80 and 160MB hard disks truly expand all your options.

All systems are available with Zenith's revolutionary Flat Technology Monitor (shown above) and VGA-compatible video card for ultimate video performance.

With breakthrough after breakthrough, these new computers are yet further proof that Zenith's AT-compatibles define the State of the Art. See the "AT Collection" now showing at your Zenith Data Systems authorized dealer. For your nearest location call: 1-800-553-0350.

Double Trouble for Rivals?

Oracle's Successful SQLs

Soaring on Data Base Management

Oracle rapidly gains PC market share under CEO Larry Ellison.

Oracle Corporation only recently decided to push its relational data base management program into the PC market. Yet a little over a year after Oracle's April 1987 debut, the program was battling it out for the number two position behind Ashton-Tate's *dBASE*.

"We are a very aggressive company," says Oracle's hard-driving founder and chief executive, Larry Ellison. Indeed, he's famous for saying his ideal marketing vice president would be Genghis Khan—it's not good enough for Oracle to win sales; everyone else must lose.

"Oracle has brilliant and aggressive marketing," concedes an official at a rival firm, "but we rarely lose to them technologically. They just seem to find sales opportunities no one else sees."

Ellison calls that opinion "utterly ludicrous." He insists Oracle is both the technology leader and the marketing leader.

He may be right. Oracle claims to have the only relational data base that runs exactly the same way on mainframes, mini-computers, PCs, and LANs. A user can start out with an application on a PC, add it to a PC network, and later migrate to mini or mainframe as the

need arises. Not even IBM can offer that flexibility. Oracle's only noticeable product vulnerability, another opponent observes, is in the quality of its end user tools and report generators.

Oracle attributes its rapid rise to a 1977 decision to build the first commercial data base supporting Structured Query Language (SQL), which facilitates the movement of data between computers, regardless of architecture. The accompanying decision to program Oracle in the portable C language made the move to PCs relatively easy.

"We made a lot of good or lucky decisions back in 1977," Ellison says. Since then, the Belmont, California, software company has doubled sales in 10 out of 11 years. In the most recent fiscal year, ending in May, profits surged 175 percent to \$42.9 million, based on a 115 percent increase in revenues to \$282.1 million.

About 10 percent of sales came from PC products. Ellison is committed to overtaking Ashton-Tate as the top PC data base company, and he isn't coy about his intentions—witness the widely circulated ads with an Oracle jet shooting down an Ashton-Tate triplane.

"If you're a corporate user of data base software for PCs, you better keep your eyes on Oracle," boasts Gene Shklar, director of marketing for (continues)

Businessland Flourishes

Succeeds Without Franchises

How do you build a billion-dollar computer chain?

A few years ago when Businessland was launching its retail chain, common wisdom held that franchising was the road to rapid market penetration and purchasing clout. But Businessland avoided that route, and its success became the prime argument against franchising. (continues on page 90)

Oracle's Quick Rise (in millions)

Source: Oracle Corp.

Oracle's sales are soaring even faster than these yearly figures indicate. The data base management system vendor posted \$104.2 million revenues in the fourth quarter of its 1988 fiscal year, ended May 31.

Intel, DCA Put CAS on the Line

Embedding Batch Communications

Intel's vision was profoundly simple: You should be able to transmit your working file from within your spreadsheet, word processor, or other application to a co-worker just as easily as you can print it.

But this scenario demands an extremely high-level interface that allows application developers to embed a communications hook with absolutely minimal effort, and someone to tackle the follow-on connection tasks in all their depressing variety and agonizing complexity.

Intel took up the challenge, and the vision has materialized for users of *1-2-3*, *WordPerfect*, and a few other packages who buy Intel's Connection CoProcessor fax/modem board (see *Product Outlook* in this issue). Guided by simple menus, they'll be in touch over phone lines with other comparably equipped users. Early next year, owners of Hayes-compatible modems and Irma micro-to-mainframe boards also will be able to join up.

However, Intel has even grander plans in mind, connecting to an intimidating range of LANs, big machines, public data networks, and other interfaces and applications. Intel enlisted Digital Communications Associates, with its market-leading Irma boards and *Crosstalk* communications software, as a partner. In August the two placed

documentation for the high-level interface (the DCA/Intel Communicating Applications Specification, or CAS) in the public domain.

An A-list of software houses has formed around the standard, including Ashton-Tate, Borland, Lotus, Microsoft, and Symantec. Each promises to build a CAS hook into at least one product. Given the minimal development strain and the potential for substantial user benefits, most of the enlistees are highly enthusiastic about the approach. (The lone exception is Microsoft, which describes its role as "interested bystander.")

With these backers, and significant customer benefits near at hand, CAS seems a ready-made standard. But how far will the standard extend? The major modem manufacturers have withheld endorsement, saying only that they're studying the announcement and that it seems complicated by the Connection CoProcessor.

"If Intel is trying to promote a way of facilitating high-speed background communications under OS/2, that's one thing," comments Gary Betty, senior vice president at Hayes Microcomputer Products in Norcross, Georgia. "If CAS is just a spec to do batch file transfers on an application-independent basis, that's another thing."

Jim Johnson, co-manager of Intel's Personal Computer Enhancement Operation in Hillsboro, Oregon, points out that the first version of CAS is for DOS, not OS/2. Additionally, he defends Intel's CoProcessor approach as mandatory for handling high-speed communications comfortably in the background.

But focusing on these issues may miss the main point, Johnson maintains, because CAS is not restricted to a single operating system or any hardware requirements. "We designed the basic architecture for both intelligent and nonintelligent devices," he says. Recasting the installed base of modems, 3270 boards, and other equipment as CAS devices calls for software development but not necessarily hardware modification, he notes.

Like Hayes's Betty, James Dow, president of Microcom in Norwood,

Massachusetts, cautions that Intel's wish list of connections will be extremely difficult to build. Johnson acknowledges the scope of the effort but promises that Intel and DCA will dedicate suitable resources.

Providing bare-bones batch communications, CAS doesn't support fancy scripting or interactive links, so it offers limited flexibility and no tools to check the news on Dow Jones. However, many users need only simple file swapping, so communications software vendors may feel the impact.

But outside observers generally give CAS a thumbs-up. "It's a terrific idea," declares Mike Millikin, senior analyst at Patty Seybold's Office Computing Group in Boston. "Today it's very difficult to take a *WordPerfect* file and communicate with someone, and this would be a transparent way." —E. B.

Oracle

(continued)

the PC product line. Oracle aims to run its product on all the key hardware and operating systems in the PC field.

Oracle's full PC data base software is powerful, expensive (at \$1295 for each machine), and aimed primarily at networked rather than stand-alone PCs. But Oracle also sells a trimmer version that runs as an adjunct to *1-2-3*. And the company recently signed a deal with WordTech Systems to sell a *dBASE*-compatible front end for Oracle data bases.

"Their real intent with these announcements is just to upset the status quo, to try to break the mind-set that users have about Ashton-Tate in the PC data base market," suggests Kenneth Burke, analyst at Alex. Brown & Sons in Baltimore. "Their future growth in the PC end is going to be pretty significant if they can break the stranglehold."

Overall, Ellison says, he sees no reason why the company can't keep doubling sales in each of the next two years—and reach \$1 billion in revenues. —John Eckhouse

The most influential laser printer in history.

The Laser Printer that Created the Future

In 1984 when we introduced what we now fondly call the "LaserJet Printer Classic", people wondered if it would sell. It was "different". It was a breakthrough.

In the days before laser printers, the standard for external correspondence was printing that matched a typewriter font. Mixed text and graphics reports could only be done "cut and paste". Printing was noisy and slow.

You had three options. You could either get a fast printer. Or a quiet printer. Or a letter quality printer.

So when HP's LaserJet Printer appeared, it changed the world.

Setting a New Standard

HP's LaserJet Printer offered speed, quietness and quality in one machine.

Dealers took notice. So did software developers. The LaserJet Printer's ability to print multiple fonts, produce graphics, and shade areas, inspired software developers to incorporate these new features into their packages.

The press was intrigued. In February 1987, Hewlett-Packard's LaserJet Printer lined up with the IBM PC, Lotus 1-2-3, and Apple Macintosh on *Personal Computing's* list of "10 Most Significant Personal Computer Products of All Time."

While LaserJet Printer sales continued to grow, the product development team was busy looking for ways to enhance the printer to better meet customer needs.

Advancing the Standard of Excellence

In March 1987, Hewlett-Packard introduced the new LaserJet Series II Printer. What could customers expect from the new printer? Everything they liked about the "Classic" plus improved ease of use, font flexibility, paper management, and add-on memory. All in a lighter-weight unit that cost less than the original.

"We'd been listening closely to our customers all along," says Tom Old, customer satisfaction Q/A manager. "Maybe that's why Hewlett-Packard leads the industry in meeting people's needs for laser printing."

▲ The HP LaserJet Series II Printer
The most exciting advance in laser printing since HP made it affordable in 1984.

▼ U.S. Laser Printer Industry Growth in Units Shipped
HP's LaserJet Printer family has played a significant role in the laser printer industry growth.

U.S. Laser Printer Industry Growth

Source: Dataquest

This page was created using WordPerfect 5.0 software.

The laser printer that's influenced the entire printer industry can help you be more influential, too. The HP LaserJet Series II Printer is today's overwhelming choice for simple word processing, integrated text and graphics, and desktop publishing.

You can begin producing impressive documents right

from the start because the HP LaserJet Series II Printer works with all popular PCs and more than 600 PC software packages.

To see the HP LaserJet Series II Printer in action, call 1-800-752-0900, ext. 900E, for your nearest Hewlett-Packard dealer. You'll be more than influenced. You'll be convinced.

The HP LaserJet Series II Printer.

HEWLETT
PACKARD

PS/2 Compatibles Missing From Action

Demand Seen as Doubtful

Long accustomed to the most sincere form of flattery, IBM has seen surprisingly little imitation of its Personal Systems/2 line.

The industry expected a deluge of PS/2 compatibles last summer, but only a trickle appeared. Tandy did ship its entry in late July but downplayed any expectations about the machine. Dell Computer, meanwhile, has suffered abrupt mood changes—indeinitely postponing in August the PS/2 compatibles it announced with a dramatic flurry in April. Other vendors continue to make PS/2 noises, but fall arrived unaccompanied by shipments of any new PS/2 clones.

Both system and component suppliers declare that the technical problems involved in duplicating IBM's Micro Channel Architecture have been solved. And Tandy and Dell don't anticipate legal

problems—although even after IBM's spring announcement of a patent licensing scheme, many vendors seem less than confident that the waters are clear of Blue sharks.

The major sticking point is lack of customer demand. While IBM has sold well over 2 million

PS/2s worldwide, researchers say the company continues to lose U.S. market share to purveyors of AT-compatible machines. Storeboard's studies of U.S. dealer revenues show that IBM's take of PC sales dropped from 46 percent in second quarter 1987 to 33 percent in second quarter 1988.

In Europe, where PS/2s have met with a kinder reception, announcements of PS/2 compatibles finally began to appear in September, led by Apricot and Amstrad.

But in the United States, even Micro Channel customers have trouble pointing to benefits of the bus. If IBM has a hard time making the argument with its customers, competitors reason, other vendors would only spin their wheels. Given the legal risks plus the engineering, manufacturing, and licensing costs, why bother?

Zenith Data Systems takes a typical stance: The firm continues to de-

velop Micro Channel-related technology, but "we may never bring it to market," remarks President John Franks.

Simultaneously, Zenith and others have embarked on multiple-processor designs built on proprietary bus architectures. These machines should offer tremendous computing power—at the risk of partly incompatible hardware that will whittle down customer choices in the 1990s.

But in September, Zenith and many other vendors joined behind Compaq in a march toward standardization via the Extended Industry Standard Architecture (see *Top of the News* in this issue). A framework for 32-bit machines, EISA should address many of the same tasks as the Micro Channel without abandoning today's PC and AT cards. Adherents say it may swamp the Micro Channel. —E. B.

Peachtree Keeps the Books *Spins Off From Intelligent Systems*

Peachtree Software nearly ended up in the scrap heap three years ago after attempting to turn the momentum from its pioneering accounting software toward a diverse line of more horizontal applications. "We weren't smart enough to be Microsoft; we couldn't keep that many products moving," summarizes Bill Goodhew, chief executive of the Norcross, Georgia, firm.

Although Peachtree enjoyed an early edge in accounting (its program was one of the few IBM re-labeled and sold during the PC's early years) its pricing had drifted off target. Peachtree's eight-module program cost almost \$5000; competing packages with similar features began selling far more copies for far less.

Peachtree hit bottom in 1985, when its parent,

mainframe software vendor Management Science America, sold the company for \$1.1 million to Intelligent Systems, a PC products conglomerate also based in Norcross. But the move sparked a turnaround.

Slashing *Peachtree Accounting's* price to \$199, the firm added 100 features to the package and reintroduced it in 1986 as *Peachtree Complete*. Additionally, Peachtree bundled its also-ran *Peachcalc* spreadsheet with its moderately successful *Peachtext 5000* word processor for \$199. (continues)

Quick—turn the page.

Peachtree

(continued)

This June, Peachtree unveiled *Back to Basics: Professional*, an easier-to-use version that costs \$199. ("Our sales department can't remember different prices," Goodhew jokes.)

The company has been profitable since 1986, and Goodhew and several other executives, backed by venture capital, recently offered Intelligent Systems \$20 million for an 80 percent share. The buyout of the 64-employee firm has won preliminary approval from the current parent. Former Peachtree head Ben Dyer will return as chairman, while Goodhew remains president and chief executive.

Peachtree Complete will continue to be sold mainly through direct and retail channels. For accounting software, where considerable hand-holding is needed, such a strategy entails some risk, particularly since Peachtree charges for support (\$1 per minute, with a \$20 minimum).

Sophisticated PC accounting programs have traditionally been sold to end users through accountants and consultants. That works fine with a high-margin price, but Goodhew says even some retailers dropped *Peachtree Complete* when its price dropped to \$199. Today, consultants and accountants are responsible for only 28 percent of *Peachtree Complete* sales. The rest are made directly via an 800 number (30 percent) or through retailers (42 percent).

This volume-oriented strategy puts Peachtree

face-to-face with DAC, whose \$99 accounting program is the market's volume leader, according to Bill Higgs, vice president of software research at InfoCorp. Peachtree today is among the top ten—not top five—PC accounting software makers, says Higgs. Fortunately, Peachtree profits from an installed base of 250,000 copies—a big plus in an arena where replacement sales are crucial.

Peachtree has development efforts under way

for *Windows*, *OS/2's* Presentation Manager, and the Macintosh, but "two out of the three will be learning projects," Goodhew says. He hints that the *Windows* applications will get the nod, but cautions against expecting products before mid-1989. And the firm will enter no new software markets in the next two to three years. With characteristic good humor, Goodhew says that accounting software "is all this old peanut-brain can think to do."

—Edward Warner

Peachtree president Bill Goodhew plans to stick to the knitting.

Vendex Targets Consumer Stores

Bundy Helps Make a Bundle

Professional wrestler King Kong Bundy may lack the subtle charm and human appeal of a Charlie Chaplin or an Alan Alda, but then, Vendex doesn't want to sell computers the way IBM does.

In the TV ads, Bundy, a *completely* clean-shaven giant of no known intellect, climbs into the ring and learns to use a Vendex HeadStart computer in 23 minutes. It's a powerful image for the technophobic millions, and one that Vendex claims sold about 100,000 computers in the past year.

Headquartered in the affluent suburb of Great Neck, New York, Vendex Technologies is a subsidiary of a 104-year-old, \$10 billion private Dutch conglomerate. Vendex International holds a majority interest in Barnes & No-

ble bookstores, Software Etc., and various department stores here and overseas.

Vendex Technologies is trying to get computers into consumer electronics stores, the places you go to buy VCRs or refrigerators. More to the point, it's packaging computers like VCRs.

In these stores, consumers are comfortably spending thousands of dollars, says Harry Fox, the quick-talking executive vice president of Vendex Technologies. At the same time, the outlets "are looking for home office goods to offset slower growth in traditional electronic equipment." Hence the everything-you'll-ever-need-in-one-package HeadStart: \$995 for a starting configuration with monitor and basic productivity software.

Which came first, the computer or the egghead? "The product came first," Fox says. "It was designed to be as idiot-proof as possible. We came up with an extremely effective approach of showing someone who clearly is not your power user."

Other vendors have gone the same route—powers such as Commodore, Atari, and even IBM with the late lamented PCjr. Fox says the quality of Vendex's Korean hardware, its bundled software, and its turnkey system approach all help it crack the market.

Vendex is moving into more powerful 80286 and 80386 machines, still emphasizing simplicity and complete systems. But Bundy won't be going up-market. He'll remain, Fox says, in "a limited role geared to the 85 to 90 million households that don't have a computer."

Less prime time for Bundy? OK—but who breaks the news to him?

—Daniel J. Rosenbaum

That's how much effort it takes to turn data into graphs with Graphwriter II.

Actually, it may take even less effort than that. You see, Lotus® Graphwriter® II is the only graphics software that lets you automatically generate large quantities of quality graphs based on current spreadsheet and database information. All with a single command.

Do you regularly need to create a variety of graphs from continually changing data such as daily inventory, monthly P&L or quarterly head count? With Graphwriter II you can create a direct link to data in your 1-2-3®, Symphony®, dBase® or ASCII files. So whenever you update your data, you can automatically update your graphs with a single command. What's more, with one keystroke you can toggle back and forth between your data source and Graphwriter II to view and select the data to be graphed. No more printing out files and time-consuming rekeying.

Graphwriter II is a full-fledged production system. You can automatically output up to one hundred charts at a time with a single command. You can even print multiple charts on a page.

And Graphwriter II offers you 24 different graph types—more than any other PC graphics package. So you can choose the chart type that best represents your data.

What's more, you have control over hundreds of style settings such as type font, heading location, bar width and color.

So if you need to create and frequently update graphs from ever-changing data, you need Lotus Graphwriter II.

To get a free self-running Graphwriter II demonstration kit, call 1-800-345-1043 and ask for demo kit AJO-2524, for 5.25" format, or demo kit AJO-2664 for 3.5" format.*

Then you can turn *this* page too.

Lotus Graphwriter II

Lotus Graphwriter II

Businessland

(continued from page 83)

The San Jose chain's fiscal 1989 sales should easily top \$1 billion, and it boasts an enviable list of corporate accounts.

"Businessland is in a very attractive position," declares Kevin McCarthy, analyst at Mabon Nugent & Co. in New York. The six-year-old chain appears to be in a better position than any other reseller to offer cost-effective networking and other connectivity solutions to big business, he explains.

Businessland's advantage can be traced to that 1982 decision by cofounders David Norman and Enzo Torresi not to sell franchises. Unlike rivals such as ComputerLand and Entré, the firm owns all 94 U.S. Businessland Centers, 1 Canadian outlet, 10 in the United Kingdom, and 24 ComputerCraft stores in Texas and California.

In the brutally competitive arena of PC sales, where most retailers operate on net margins below 8 percent, Businessland stores enjoy a definite pricing advantage over competing franchisees. (ComputerLand stores must pay the franchiser 5 percent off the top.) Central buying also makes it easier to command the best prices from suppliers and to standardize on products and services. That, McCarthy notes, is a godsend for customers charged with equipping and supporting offices that stretch from Massachusetts to California.

Then too, Businessland can't be considered a retailer; 80 percent of a cen-

ter's revenues comes from outbound sales efforts. In fact, the company has a reputation of being almost unfriendly to customers who wander in without an appointment. That modus operandi may be changing, however, as a result of a \$23 million stock swap last summer, in which Businessland acquired the retail-oriented ComputerCraft chain.

At first glance, it seems a strange pairing. While the two chains sell a similar mix of IBM, Compaq, and Apple computers and accessories, Businessland's offices are as subdued as corporate boardrooms and often nearly vacant unless a training class or demo is going on. By contrast, ComputerCraft operates a number of "superstores," usually crammed with colorful displays that shout at the customers milling about. Small business, home, and educational tools are a strong focus.

As Senior Vice President James Heisch emphasizes, "Businessland is not a retailer. It's an outbound sales force with a facility to provide demonstrations and training for our clients." But if ComputerCraft can seize some retail opportunities, so be it.

"Retail is not dead," says JoeAnn Stahel, president of the Dallas research firm Storeboard. She credits Businessland with leading the industry into outbound sales. Now, she says, the chain is pointing the way back into a fresh retail boom that's sparked by improved price/performance levels delivered by the 80386 chip.

"Businessland is not a retailer," stresses senior VP James Heisch.

Plans call for ComputerCraft to continue operations under the same name, with the same retail orientation. However, it is destined to swim upscale, addressing the increasing needs of small businesses by sharing Businessland's vaunted support capability. That technical structure is key to both divisions as they move into ever more complex networked systems.

Businessland installed 45,000 network nodes in its last fiscal year, and the number is expected to double this year. But such rapid growth requires top-notch talent, analyst McCarthy notes. "If you're a top engineer coming out of school and you have a choice of working for Hewlett-Packard or Businessland, most people are going to choose Hewlett-Packard," he adds.

To buck that trend, Businessland—which posted a profit of \$19 million last year—plans to spend almost as much this fiscal year on training system engineers and sales and technical staff.

And, practicing what it preaches, the company has tied its stores into one of the industry's largest wide area nets.

As founder Norman once remarked, "In this business, a quarter is like a year, and a year is like five years." From the beginning, Businessland has responded quickly to fast-shifting market opportunities. Last spring, for example, it launched a catalog of discount software and mailed a million copies.

But since start-up, Businessland has studiously avoided price competition, concentrating on adding services and support and charging for them. This approach is paying off: sales per employee have risen steadily, from \$296,000 in fiscal year 1987 to \$360,000 in fiscal year 1988. Profits have finally risen above the paper-thin 1 percent-of-sales level, where they hovered in the early years, to more than 2 percent.

The chain now employs slightly more than 3000, and it will continue to expand, says Heisch. Both Businessland and ComputerCraft logos will appear in new geographical markets, particularly Canada and Continental Europe. —Mark Henricks

TWO-FISTED MANAGEMENT

THE ANNUAL HARRIS PICNIC IS A TIME TO PUT ASIDE ALL EMPLOYEE-MANAGEMENT DIFFERENCES FOR A DAY OF CAMARADERIE AND OUTDOOR FAMILY FUN.

Peters! Are these your kids? I'm impressed! How do you do it on your salary?!!

IT'S A TIME FOR BOSS AND WORKER TO RELATE AS JUST PLAIN FOLKS.

Let's toss a few, eh, Mac!?

God, how'd I get into this?

That's good. I'll never be able to beat that toss. I'll just let him win and he'll think...

Wait, wait. If he suspects that I'm not trying hard enough he'll think I don't have that competitive spirit, that aggressive go-getter drive...

But if I win that could really be bad news!! But if I, if I if I... hominy hominy hominy...

Wow, I've never seen anyone blackout playing horseshoes!

The screenshot shows a classic Macintosh desktop environment. At the top is a menu bar with the following items: File, Edit, Format, Data, Options, Macros, Window, and Help. Below the menu bar is a window titled "HP LaserJet". The window's title bar includes a small icon on the left and a close button (a square with a dot) on the right. The main content area of the window is titled "Purchase Form" in a large, bold font. Below the title, there is a section labeled "Printer". Under this section, a list of printer models is displayed: "HP LaserJet on LPS1", "HP Plotter on COM2", "PaintJet on LP2", and "HP DeskJet on COM1". The "HP Plotter on COM2" option is highlighted with a yellow background. To the right of this list are three buttons: "OK", "Cancel", and "Setup...". Below the printer list, there is a section labeled "FAB" (Fabric) with a table that has two columns: "DESCRIPTION" and "PRICE". The table is currently empty. At the bottom of the window, there is a status bar with a small icon on the left and a close button on the right.

Two world leaders develop highly explosive material.

Hewlett-Packard and Microsoft just took the simple act of communication and turned it into some-

thing a bit more powerful.

Illumination. Because to us, anything worth presenting in a spreadsheet

is worth presenting more clearly, more concisely, and more forcefully. Which is exactly what Microsoft® Excel and the Hewlett-Packard® LaserJet Series II® printer let you do.

With this powerful combination of software and printer, now it's easier to take common data and make it look anything but common. With incredibly flexible font styles, font sizes, borders and shading. Incorporated into spreadsheets, charts, tables and forms that instantly make your data say more. Your numbers add up to more. Your

facts, figures and ideas mean more.

And of course, HP® desktop plotters and printers, from the ColorPro® plotter to the PaintJet®, DeskJet™ and LaserJet Series II printers, can unleash the potential power inside every box of Microsoft Excel. And vice versa.

To witness a whole new world of spreadsheet output, call us at (800) 541-1261, Dept. I59 for a free copy of our booklet, "Of Power And Printers." Or simply go to your dealer. And see firsthand what happens when two explosive elements get together.

And the chemistry's just right.

HP LaserJet Series II Printer

Microsoft®

Laptops of Luxury

NEC aims for another MultiSpeed-like splash with the high-end ProSpeed 80286 and 80386 laptops.

But the tiny UltraLite may make the biggest waves.

*Eric
Knorr*

People who need a laptop fall into two camps: those seeking a box with enough power to replace their desktop computer, and those who want the least obtrusive, most mobile PC they can find. With the ProSpeed and UltraLite laptops, NEC Home Electronics is courting both groups.

The clamshell-style ProSpeed, which comes in both 80286 and 80386 models, is a desktop to go. Weighing in at 18 pounds without the optional 3-pound battery, each model offers an EGA-compatible backlit LCD, a 1.44MB 3½-inch floppy drive, 16-MHz operation, and enough options to give a Compaq lunch box a run for its money. The UltraLite, on the other

hand, is the size of a notebook and weighs less than 4½ pounds—literally the smallest, lightest PC compatible available with a full 25-line display.

Muscle in a Clamshell

NEC is pushing its pair of ProSpeeds—not just as road warriors but as all the PC you'll ever need. The ProSpeed 80386 comes with 2MB of 32-bit RAM (expandable to 10MB) and a 29ms 40MB hard drive with a 64K cache controller. Also standard are a VGA port, an 80387 coprocessor socket, a 91-key PS/2-style keyboard (minus the second cursor keypad), one serial and one parallel port, DOS 3.30, and IGC's VM/386 multitasking environment.

NEC expects to sell this starting configuration for between \$7000 and \$7500. A whopping 100MB internal hard disk with a 25ms average access time will also be available, and a proprietary 16-bit expansion slot will accommodate as-yet-undisclosed options.

NEC's ProSpeed 386 and desktop docking station (left) are a powerhouse team; at right, the tiny UltraLite.

The ProSpeed 80386's most unusual feature is its optional deskbound "docking station." More than just an expansion box, the docking station provides its own 200-watt power supply along with three full-size 8/16-bit expansion slots, one full-size 8-bit slot, and two 5¼-inch half-height drive bays.

When you return from the road, you simply slide the ProSpeed 80386's 120-pin connector into the docking bay—no muss, no fuss. The clamshell automatically switches to the docking station's AC power, a second CONFIG.SYS file kicks in to handle your desktop options, and ports on the rear of the desktop box duplicate the functions of those on the ProSpeed. The docking bay also adds a second se-

PC World previews are informal assessments of products that at press time were still in the development stage. Complete reviews—including features evaluations and performance testing—will appear only after a product is officially released.

rial port and a switchable AC socket for a VGA monitor.

The deskbound unit for the ProSpeed 80286 seems more like a garden-variety expansion box. The 80286 model is scaled back in other respects. It comes with 1MB of RAM (expandable to 5MB) and a 27ms 20MB hard disk; as with the ProSpeed 386, the 2400-bps modem is a \$599 extra. NEC representatives aver that the ProSpeed 80286's asking price will be between \$5000 and \$6000.

One of the most impressive features of both ProSpeeds is a detachable 5½-by-9-inch display, one of the first EGA-compatible LCDs available. The so-called "compensated" twisted nematic display offers excellent light absorption, while the fluorescent backlighting is exceptionally bright and even. The upshot is that this backlit LCD is truly black and white, with first-rate contrast.

The backlighting on both units powers down automatically after a period of keyboard inactivity. That's good, because a charge lasts an average of only 2 to 3 hours. The battery is external and covers all the ports on the back of the unit, so battery operation was clearly an afterthought.

Born to Get Lost

While the ProSpeeds have the muscle, the UltraLite seems guaranteed to get the most oohs and aahs. Less bulky even than Tan-

dy's TRS Model 100, the 1.4-by-8.3-by-11.75-inch UltraLite centers on a NEC V30 running at 9.54 MHz—the same CPU as the NEC MultiSpeed's. For \$3000, you get 640K of RAM, a 1MB dedicated RAM disk (upgradable to 2MB), a NiCad battery, a 2400-bps modem, an AC adapter, and a built-in serial port. The display is a pleasant backlit super-twist LCD with CGA resolution, similar to that offered by the MultiSpeed HD. As with the ProSpeed display, the backlighting times out automatically.

Although full size, the UltraLite's keyboard might take some getting used to. The keys are nearly flat, and though they're responsive, they sink only slightly when you press them. Nonetheless, the layout is sensible: 12 small function keys line the top, and when you press the special <Fn> key, the four arrow keys on the inverted T cursor pad double as <Page Up>, <Page Down>, <Home>, and <End>.

One UltraLite ace in the hole—or more accurately, card in the slot—is a selection of ROM-based options. To begin with, DOS 3.30, *Lap-Link*, and a DOS shell are burned into system ROM, which is treated as drive D:. More interesting are the other ROM-based applications, each of which is

sealed in a credit-card-size package.

Pop off a plastic door, and the ROM card slips into a slot on the side of the UltraLite, which treats this receptacle as drive B: (the RAM disk is drive C:). NEC has ROM cards showing for *Crosstalk Mk.4*, 1-2-3 release 2, *WordPerfect 5.0*, *Microsoft Works*, and *XyWrite III*; other applications are reportedly in the works.

Drive A: is an optional 3½-inch bootable external drive. It requires the UltraLite's AC adapter and offers the only way to get data on and off the machine, aside from a modem or null-modem link. Outfitted with a parallel port, the external drive is also the sole way to talk to a parallel printer.

Battery operation is the UltraLite's weakest link; a full charge, as with the ProSpeeds, lasts for only 2 to 3 hours. In its favor, the UltraLite provides a clever four-LED "gas gauge" that tracks battery charging. The LEDs are otherwise unlit, but press a button and they tell you how much juice is left.

Rarely does a company aggressively target both the high and low ends of a market at the same time. Whether NEC hits the right note on the high end with the bulky but powerful ProSpeeds 80386 and 80286, the UltraLite seems sure to strike a chord with users dying for a laptop that *really* fits in a briefcase. ●

Eric Knorr is a senior editor for PC World.

S N A P S H O T

ProSpeed 80386, ProSpeed 80286, UltraLite

NEC Home Electronics is targeting both ends of the laptop spectrum with powerful but hefty 80386- and 80286-based ProSpeed models and an extremely compact battery-powered UltraLite unit.

KEY FEATURES

■ **Deskbound "docking station" for ProSpeed 80386 offers heavy-duty power supply, four expansion slots, and two disk bays**

■ **Optional 25ms 100MB internal hard disk for ProSpeed 80386**

■ **EGA-compatible ProSpeed LCD with "compensated" twisted nematic design offers excellent screen quality**

■ **UltraLite places DOS 3.30, *Lap-Link*, and a DOS shell in ROM and supports ROM cards for *Crosstalk Mk.4*, 1-2-3 release 2, *WordPerfect 5.0*, *Microsoft Works*, and *XyWrite III***

The inspiration for our personal computers.

Your basic toaster, circa 1940.

Chances are, someone you know still has one on their counter. Not because they collect vintage appliances. Rather, because it still works well. And does the job it was designed to do. Make good toast.

At Hyundai, we admire this toaster.

It's a stainless example of the kind of no-frills functionality, reliable performance, and enduring design we believe in. And build into everything we make. From our cars to our line of personal computers.

Take our 10 MHz XT-compatible — the Super 16TE. No bells and whistles here. Just dependability you can trust your business to. And technology you can use. Like a choice of 5.25" or 3.5" disk drives. It also comes with

an integrated software package that has all the programs you may ever need to take care of business.

Like all our compatibles, the Super 16TE is backed by an 18-month warranty. And just the kind of comforting support you'd expect from a \$20 billion world class company.

For a computer that will give you good basic value for your bread, see the Super 16TE and our other affordable compatibles today. For the dealer nearest you, call 1-800-544-7808 ext. 120.

 **HYUNDAI**

Practical Compatibles.

Is Smaller Better?

Can a laptop be your only computer? With Compaq's SLT 286, the answer is a definite "maybe."

**Richard Landry
and Karl Koessel**

Ever since Alan Kay envisioned Dynabook—the perfect portable—vendors have labored to create the smallest, lightest, most powerful and expandable system possible—with the best screen and the longest battery life. NEC, Toshiba, Zenith, and others have offered products that make various trade-offs between performance and portability (see the preview "Laptops of Luxury" in this issue). Moving from lunch box to laptop, Compaq waited for the technology needed to create the ultimate 286 design—a lightweight, full-function, OS/2-compatible, no-compromise portable.

The result is the SLT 286, which parallels the Deskpro 286 and Portable III in price and performance while delivering the sharpest laptop screen currently available. Weighing in at just under

Compaq's first laptop, the svelte SLT 286, easily slips in and out of the optional Desktop Expansion Base.

14 pounds, the SLT 286 features a 12-MHz Harris CMOS 80286 processor operating at one wait state. The built-in VGA gives the 10-inch, backlit, fluorescent, supertwist LCD screen up to 8 shades of gray at 640 by 480. The SLT 286's display is thus both rich and soothing to the eyes—and when was the last time you could say *that* about a laptop screen?

The sleek, compact SLT 286 houses one 3½-inch floppy drive and a fast 20MB or 40MB hard drive. Both drives rate a 29ms average access time, but the 40MB model gets a performance boost from its 1:1 interleave ratio. The standard configuration also features a serial port, a parallel port, a

socket for a 12-MHz 802C87 math coprocessor, and interfaces for an external VGA monitor, an enhanced keyboard, a separate numeric keypad, and an internal 2400-bps Hayes-compatible modem or a second serial port.

The SLT 286 comes standard with 640K of RAM, expandable to 3.64MB with 1MB memory cards that easily snap into the system. Support for EMS 3.2 is built in.

So light that it feels somewhat flimsy, and missing a separate numeric keypad, the detach-

able keyboard nevertheless has a nice touch that compares favorably with the standard Compaq keyboard. The keyboard stows into a shallow recess on the top of the unit, concealing the bay for a drop-in NiCad battery that provides up to 3 hours of power. The battery gets help from a power conservation system that shuts down the screen and hard disk when they are inactive for a user-specified period of time. You can also put the laptop in limbo temporarily by pressing a standby button, so you can restart it without having to re-

load your applications. The system includes a lightweight AC adapter.

What's the tariff for this ride? At press time, the Model 20 was slated to retail for \$5399, the Model 40 for \$5999. The comparable Portable III Models 20 and 40 retail for \$4999 and \$5799, respectively, while the Deskpro 286 Models 20 and 40 go for \$3599 and \$4199.

Computing à la Carte

Memory aside, the SLT 286 isn't short on expansion options. To keep prices from skyrocketing, Compaq has adopted a modular approach that lets you add options incrementally. For example, you can supplement the unit's keyboard with an external numeric keypad, and you can enhance storage capacity with an external storage module that holds a 5¼-inch floppy disk drive or a 40MB tape backup unit. A switch enables you to boot the system from the floppy drive.

If you simply want to add a full-size keyboard and a VGA color monitor, you don't require any additional options. But if you need to use a network card, for example, a desktop expansion base provides two full-size 8/16-bit slots, and its own power supply, along with parallel, keyboard, and display ports that duplicate the functionality of the laptop. The SLT 286 simply slides into this base and can immediately access

any devices connected to it. At press time, prices were not set for the external numeric keypad, storage module, or expansion base.

Unfortunately, this à la carte approach penalizes those who want the SLT 286 to be their one and only computer. If you need to supplement the system's storage capacity with both a 40MB tape backup unit and a 5¼-inch floppy drive, then you'll need not one but two external storage modules, but you can use only one at a time. If you want fur-

The Deskpro 386/20E appears identical to the Deskpro 386S but packs 20 MHz of full 32-bit power inside.

SNAPSHOT

Compaq SLT 286, Compaq 386/20E

Designed to fill the bill for both travel and office, Compaq's first laptop features a 12-MHz 286 chip, a VGA screen, and powerful expansion capabilities.

KEY FEATURES

- Backlit, supertwist LCD display offering 640 by 480 resolution with eight levels of gray
- 29ms 20MB or 40MB internal hard disk
- Expansion base with room for two full-size 8- or 16-bit expansion boards

AVAILABILITY

immediate

Compaq Computer Corp.

Reader service number 681

ther hard disk expansion, you must invest in the desktop expansion base and either the fixed disk drive expansion unit designed for Compaq desktops or a hard disk card. All in all, you could end up with a system that sprawls across your desk.

Michael Swavely, Compaq's vice president of sales and marketing, states that upcoming products will incorporate further improvements in size and weight as well as in processor, hard drive, display, and power technology. A 386 laptop would certainly qualify as the ideal all-in-one computer. In the meantime, the SLT 286 looks like an attractive alternative to a 286 desktop for users who want to take their data with them.

20 MHz and Shrinking

Compaq is thinking small even on the desktop, offering a trimmed-down version of its 20-MHz 80386 system and discontinuing two larger 386 models.

The Deskpro 386/20E sports the small footprint and new styling pioneered by the Deskpro 386S but goes one better by integrating 16-bit VGA graphics directly on the motherboard instead of on a piggyback card. Like its now-defunct brother the Deskpro 386/20, the 386/20E gets a lift from an 82385 cache controller paired with 32K of 35ns RAM and an optional 80387 or Weitek coprocessor. The unit comes with 1MB of 32-bit RAM ex-

pandable to 16MB on a board plugged into its high-speed memory slot. Compaq offers this board in both 1MB and 4MB options, with expansion through 1MB or 4MB memory modules.

Like the diminutive 386S, the 386/20E includes four 8/16-bit expansion slots; serial, parallel, and mouse ports; a 5¼-inch, 1.2MB drive; and room for three additional half-height devices. You can get up to 220MB of storage by installing two 110MB hard disks. Compaq offers the 386/20E Model 1 with a single 1.2MB drive for \$5199. The Model 40 includes a 29ms 40MB hard drive for \$6599; the Model 110, with a 25ms 110MB drive, goes for \$7999. Both hard drives feature a 1:1 inter-

leave. Compaq also has upgraded its disk-caching software. All models are available now.

Gone with the Deskpro 386/20 is the 16-MHz Deskpro 386 (the world's first 80386 machine to ship in volume), leaving only the Deskpro 286 and the Deskpro 386/25 in traditional Compaq livery. Swavely says Compaq will continue to move its line to the trimmer design. New high-end offerings will appear first in the larger size, but customers who wait awhile will get the same power—writ small. ●

Richard Landry is PC World's editor in chief, and Karl Koessel is the technical editor.

Circle 218 on reader service card

At only \$299, DesignCAD is the simplest way to get some very sophisticated results.

You can spend thousands of dollars for a CAD software package without getting the kind of power and performance that DesignCAD delivers for only \$299...complete! With the DesignCAD's easy-to-use, easy-to-learn single keystroke commands, you'll be producing ultra-sophisticated results in no time at all.

The Features You're Looking For

The options you normally have to purchase separately with other CAD programs, aren't options with DesignCAD. They're built in.

- Expanded Memory Support
- Selection of Character Fonts
- Symbol library with over 500 symbols
- Bill of Materials utility
- Finest curve fitting in the industry
- Extensive snap features

- True Auto Dimensioning with several formats
- Extensive layering features
- Full zoom, pan and rotate capabilities
- And many other features

In addition, DesignCAD's extensive file transfer utilities allow you to read and write different formats. DesignCAD allows you to: transfer documents to and from IGES, DXF, HPGL, transfer to GEM and Postscript, and to read ASCII text files and X,Y Coordinate files.

DesignCAD re-defines Compatibility

Virtually any printer, plotter or graphics adapter compatible with IBM PC is compatible with DesignCAD. DesignCAD is also compatible with most other CAD systems, large and small.

For all of the capability, compatibility and ease-of-use you need in a CAD system, get DesignCAD — only \$299! See your local computer dealer, or contact:

HeadStart III™

One System for all the right reasons.

At Vendex we design every computer as a complete system. We integrate peripherals usually offered only as options. All you have to add is electricity. So your HeadStart III™ is productive from the moment you open the box.

5 1/4" and 3 1/2" Diskdrive
Both Standard

Convenience. The HeadStart III™ incorporates both a 1.2 megabyte 5.25-inch and a 1.44 megabyte 3.5-inch floppy drive, both standard, so you don't have to choose between the two. Our "bridge technology" lets you boot a disk from either drive and software

select your drive configuration.

In addition, the low profile and small footprint of the HeadStart III™ make it ideal for even the smallest workstation.

Performance. The heart of the HeadStart system is a 12MHz 80286 processor with a hefty one megabyte of standard RAM. Our hard drive system delivers a full 32 megabytes of storage operating at 28 milliseconds with astonishing 1 to 1 interleave and a 32K buffer.

But we don't stop there.

True 16 bit built-in VGA Graphics is component matched for high speed and clarity. Even our 101-key PS/2 type keyboard has been tailored for speed and durability.

Flexibility. Virtually any combination of peripherals can be attached without ever opening the computer. Two serial ports, one parallel port, a bus mouse port and even a game port are all standard.

Expandability. The HeadStart III™ is engineered for your future applications. It has been designed to give you 3 empty full-sized expansion slots for networking or accommodating the many diverse peripherals that are available today and tomorrow.

In fact, the HeadStart III™ is truly OS/2 ready. You can add two full megabytes of RAM without having to buy any additional boards.

Circle 10 on reader service card

For more information about the HeadStart III™ and our full line of advanced computer systems, or to find the nearest dealer, call toll-free **1-800-882-1888**. Can you think of a reason not to?

Value. Going beyond DOS which is of course standard, an unprecedented package of 14 name brand programs worth thousands of dollars are included FREE with your HeadStart III™.

Support. Our P.C. COACH, nationwide toll-free hotline is available free to registered owners.

VENDEX®
HEADSTART™ III
 Built to be compatible with you.™

SPECIFICATIONS

MICROPROCESSOR: Intel 80286-12
 SPEED: 12MHz/8 Switchable
 BIOS: Award
 BUILT IN RAM: 1 Megabyte
 EXPANDABLE TO: 3 megabytes
 POWER SUPPLY: 145 watts 110/220 switchable
 KEYBOARD: 101 key PS/2 compatible
 GRAPHICS: VGA Autosync
 FLOPPY DRIVES: one 5.25" 1.2 megabyte,
 one 3.5" 1.44 megabyte

HARD DRIVE: 32.1 megabyte, 28 milliseconds, 1:1 interleave
 BUILT IN INTERFACES: Parallel, 2- RS232 serial, mouse, joystick
 EXPANSION SLOTS: 3 available
 MOUSE: Standard
 SOFTWARE: DOS 3.3, GW Basic, HeadStart Advanced Environment, Floppy Driver, Framework II, 3-D Graphics, ATI and Computer-EEZ Tutorial Software, Xtree hard disk manager, Publish-it! Chessmaster 2000, Splash VGA paint program, Bookmark, plus Twist and Shout.

104 **PRODUCT OUTLOOK**

SuperCalc 5

The granddaddy of spreadsheets greets the new generation, adding worksheet consolidation, selective recalc, and more.

Connection CoProcessor

PC-based communications gets a big boost with this combination fax/modem board and 80188 CPU.

Opus I

Link graphics to data base records, text, or other graphics with this powerful *Microsoft Windows*-based drawing program cum data base.

Smalltalk/V 286

Cheaper and easier than OS/2, this object-oriented programming environment for 80286- and 80386-based computers addresses more memory and delivers multitasking and a graphic user interface.

MapInfo

Turn your data base files into maps that let you analyze the data and create presentations.

TASK-force

Pare down billing and accounting chores with an all-in-one small-business-management program.

Paragon 286V

Clever design packs advanced features, VGA graphics, and lots of free slots into a small system.

112 **BRIEFLY NOTED**

3000 NL, 1000 TL, 1000 SL

Tandy boosts the performance of its most popular 80286-based machines by up to 30 percent and upgrades two low-end PCs.

Who/What/When Office

Schedule people and resources on your network and then view the info three ways.

Extend-A-Name

Break the DOS 8-character limit for naming files with this memory-resident product.

Battery Watch

Laptop users: If running on empty isn't your style, this utility checks your batteries every 2 seconds to let you know when you're getting low.

Microsoft Word Companion Disk

Peter Rinearson's one-man crisis intervention team for *Word 4.0* users includes over 300 macros, a slew of style sheets, and more.

OPTune

Like a private mechanic for your hard disk, this program keeps your disk in top shape.

EFAX-88

A portable fax machine that transmits hard-copy information at a decent rate without errors.

386 MotherBoard/AT

Transform your AT or compatible into an 80386 with Hauppauge's motherboard upgrade.

120 **UPDATE**

Harvard Project Manager 3.0

First-time users of Software Publishing's project planner can get to work within minutes, thanks to new fast-tracking and outlining capabilities.

DeskJet Landscape Upgrade Cartridge

Print spreadsheets and tables sideways and expand your font repertoire with a pair of cartridges from Hewlett-Packard.

Foxbase+ 2.10

Customizable templates bundled with this data base manager let you produce applications, paint screens, and compile code.

Actor 1.2

An object-oriented programming language whose turf is *Windows* and expanded memory.

Turnkey 3.1, Turnkey 3.1 Menu Builder's Version

Optimal Solutions updates its easy menu-building utility with a 1-2-3-like interface and adds a developer's version that lets you create fast-running menus for others in your work group.

Accpac Plus Windowing System Manager, LanPak

Improved windowing and LAN modules give this accounting package greater macro muscle, enhanced search power, and more.

Media Master 5.0

Format CP/M, DOS, and TurboDOS disks for easy swapping among incompatible systems.

Designer 1.2

Windows desktop publishers can build palettes from a rainbow of 16 million colors.

SuperCalc 5

SuperCalc, The Sequel

The latest episode in the *SuperCalc* saga fast-forwards to the future of spreadsheet-based business modeling, bringing users many of the most frequently asked for features in the genre, including worksheet consolidation and selective recalculation. But *SuperCalc 5*, whose roots are planted firmly in the origins of personal computing, hasn't forgotten the million or so users who have taken it this far. The new *SuperCalc* maintains complete file compatibility with previous versions, the earliest of which may even now be chugging away on an old CP/M machine somewhere in your company.

SuperCalc 5 will play on any stage, whether it's a full-featured 80386 platform or a two-floppy PC—a definite plus for worksheet consolidation. Now you can integrate the monthly or annual budgets of the many departments or divisions in your company by hot-linking crucial cells (like those containing totals) with the appropriate cells in a master worksheet; the critical cells need not be in the same locations in their respective worksheets. And, figuring the daily consolidated receivables for a company with multiple departments is no longer a forbidding chore.

The screenshot displays a SuperCalc 5 worksheet titled "Consolidated Sales for Eastern and Western Regions". It features several tables of data and formulas. The top table shows "Widget retail sales" and "Widget sales" for January, February, and March. Below this, there are two separate tables for "Sales for Eastern Region" and "Sales for Western Region", each listing sales data for six months (Jan to Jun) for several individuals. At the bottom, a formula bar shows a formula: "Form=SUM(EAST!JAN_SALES, WEST!JAN_SALES)". The status bar at the very bottom indicates "Width: 9 Memory:1111 Last Col/Row:A1" and "1-2-3".

Consolidated Sales for Eastern and Western Regions			
	January	February	March
Widget retail sales		567800	725000
Widget sales	275500	325000	410000

Sales for Eastern Region						
	Jan	Feb	Mar	Apr	May	Jun
Appleton, Sarah	1000	1050	1100	1150	1200	1250
Craig, Robert	900	875	850	825	845	870
Ellison, Franklin	1250	1300	1400	1000	1025	1300

Sales for Western Region						
	Jan	Feb	Mar	Apr	May	Jun
Overhart, Susan	1000	900	1150	1325	600	900
Palley, Ralph	900	1000	325	975	520	575
Quens, Melinda	1250	1100	1000	900	950	1125

SuperCalc 5 consolidates worksheets, does selective recalc, and supplies many other popular spreadsheet-modeling features without abandoning the estimated 1 million users of prior versions.

SuperCalc 5 also reads 1-2-3 .WKS and .WK1 files as well as executing Lotus macros, for those in your organization enamored of the other major player in the market. And should die-hard Lotus aficionados want to share your work, you can output in .WKS format or even hot-link to their worksheets.

The new release makes a second bow to flexibility and to 1-2-3 by letting you choose either *SuperCalc 5* or Lotus-style menus; you can even toggle between them using slash commands. If you like, embed the toggle in 1-2-3 macros to perform *SuperCalc* commands not found in 1-2-3.

SuperCalc's latest incarnation serves up dozens of different graph treatments with variable colors, 3-D pies and bars, and interactive links to the range that created them. Its forms-creating capability offers grids, lines, and shading of such quality that you can create a 1040 form that looks

just like the one Uncle Sam sends. Desktop publishers can move easily from spreadsheet to annual report by hooking up to a phototypesetter or a 35mm slide maker.

More news in the compatibility arena: *SuperCalc 5* cooperates with Computer Associates' add-in data base manager, *Silverado*. Sparse-matrix memory management means that you pay the price in RAM only for those cells that actually contain data; recalcs are faster because *SuperCalc 5* operates on only those cells affected by a numerical change. The program skips over labels, unaffected formulas, and other irrelevancies. An undo command saves you from ill-placed keystrokes.

SuperCalc 5, which lists for \$495, requires DOS 3.00 or a later version and 512K of memory. Upgrades are free to

Computer Associates' SupportPlus maintenance plan members who are caught up on their \$150 annual dues. If you bought *SuperCalc 4* after May 23, 1988, send in your registration card for a \$100 refund and a copy of *SuperCalc 5*. Others must pay \$100. Computer Associates Int'l, 1240 McKay Dr., San Jose, CA 95131; 800/531-5236. Reader service number 740

Connection CoProcessor

Fast Talk

For all the chatter about multitasking, the PC is still a sequential device that, if human, couldn't walk and chew gum at the same time. Some clever control programs, like Quarterdeck's *Desqview*, are able to divide the processor's time between two or more applications and, by quickly switching between them, make it appear that they are running simultaneously. But to truly multitask, two brains are definitely better than one.

A second processor really pays off in the increasingly important area of PC-based communications, which is why the Intel Personal Computer Enhancement Operation equipped its new all-in-one communications board with a speedy 10-MHz 80188 CPU, backed up by 256K of memory. The Connection CoProcessor is a fax/modem combo that lets you spread out your spreadsheet or rummage

through your data base in the foreground while it sends and receives fax messages, data files, or even programs over phone lines in the background.

This single-slot board will route group 3 faxes at 9600 bps to and from fax machines or similarly equipped computers. A Hayes-compatible daughterboard modem lets you send data files and even binary files, such as programs, at 2400 bps to other PCs or E-mail and bulletin board services.

You won't have to wrestle with baud rates, stop bits, and other telecommunications trivia every time you want to communicate, because the Connection CoProcessor lets you script and store the parameters for your sessions. To use the Connection CoProcessor, you only need to know *who* and *what*. Its point-and-shoot interface makes it easy to select the what from a hard disk file directory and the who from your personal directory. Or, you can enter the information from the command line. The Connection CoProcessor forwards files, faxes, and E-mail to distribution lists as large as 999 names.

Intel says the Connection CoProcessor is just the first of a family of products that will support the DCA/Intel Communicating Applications Specification (CAS), jointly developed by Intel and Digital Communications Associates. CAS is a communications interface

standard that will let applications programmers add transparent but limited communications functions to word processing, spreadsheet, and other standard programs. It won't give these applications the scripting and interactive capabilities of full-blown communications packages, but it does support some batch-mode functions.

The Connection CoProcessor is \$995; the optional modem is \$295. Intel Personal Computer Enhancement Operation, 5200 N.E. Elam Pkwy., Hillsboro, OR 97124-6497; 800/538-3373.

Reader service number 741

Opus I

The Picture File

No file is an island, which is why spreadsheets, data bases, and word processors give us several indispensable ways to connect words and numbers. Pictures are a tougher proposition, though, since there seems to be no logical way to connect their parts.

Now, taking a cue from Apple's HyperCard, Roykore Software has married a powerful drawing program to a data base under the Microsoft Windows environment, so your desktop publishing drawings and CAD files needn't remain strangers. Using *Opus I*'s "hyper-drawing" technique, you can link all or part of a graphic to other similar or dissimilar graphics as well as to data base records and text in a nonrelational fashion.

Windows' pulldown menus and dynamic data

exchange make such linkage as easy as pointing—first to an object in your drawing, and then to a record in an accompanying text file. A tap on the <Enter> key or a click of the mouse makes your connection. When you want to call up another picture or record, you point to a linked portion of your graphic and click on it again.

A complete drawing program, *Opus I* lets you create your own drawings using object-oriented tools ranging from straight lines to polygons and ellipses. You can choose from 40 patterns, 8 colors, and 10 line styles, and you can add text in a variety of typefaces. You can even create objects from bit maps of scanned photos, then trace and edit them to your liking.

Applications for *Opus I* go far beyond manipulating and cataloging graphics files. A flat-file manager,

Opus I allows you to link just about any sort of information—text, numbers, dates—to your drawing. For example, you can manage a company's sales offices by linking up a number of images that show the different sales regions. By pointing the cursor at part of an image—say, a symbol representing an office location—you can call up further information, such as sales figures, personnel data, or a floor plan. You can even create maps that let you zoom to specific neighborhoods or streets for further detail.

You can transfer information between *Opus I* and other data bases using ASCII or DIF formats. The \$395 program, which includes a run-time version of Windows 2.0, requires DOS 3.00 or a later version, 512K of memory, and a hard disk drive, as well as a CGA, EGA, Hercules, or compatible graphics adapter.

Taking a cue from hypertext on the Macintosh, Roykore Software has combined a powerful drawing program with a data base under the Microsoft Windows environment. You can link all or portions of your graphics files to others as well as to data base records with *Opus I*'s flat-file manager.

ACCOUNTING SOFTWARE YOU'LL NEVER OUTGROW.

Business managers now are projecting their accounting software needs well into the future. That's smart. The software you choose must meet the demands of your evolving business and provide management information to help fuel growth.

In the words of PC Magazine, Macola Accounting Software "is at the top of its class... a flexible, powerful system that is well suited to many different businesses."

13 Integrated Modules

Accounting General Ledger—Accounts Receivable—Accounts Payable—Payroll—Assets/Depreciation

Distribution Inventory Management—Customer Order Processing—Purchase Order and Receiving

*Call for availability. IBM, PS/2, OS/2 are registered trademarks of IBM. Micro Focus is a registered trademark of Micro Focus Corp. PC Magazine is a publication of Ziff Davis Communications Co. Macola is a registered trademark of Macola, Inc.

Manufacturing Bill of Material Processor—Material Requirements Planning—Master Scheduling—Shop Floor Control*—Job Costing*

Plus there's a Report Writer that allows customized reporting and can easily transport data files to popular spreadsheet, word processing and data base programs.

Proven Network Compatibility.

Macola Software reflects 15 years of maturity in mini and micro LAN environments. No other software can say the same. So when your business is ready to add more workstations, your software is ready as well. With no limitations.

Speed and Data Integrity. Macola Software is written in Micro Focus COBOL for maximum speed and data integrity (source code available.) IBM has licensed Micro Focus COBOL as its SAA standard for the new PS/2 and OS/2.

Comprehensive Support. PC Magazine also determined "Macola's technical support, documentation and customization assistance meet the high standards set by the software."

Running Is Believing. Your choice of Macola Software is a one-time solution for the life of your business. For detailed information, "live" demonstration modules and an authorized reseller in your area, call today:

Smalltalk/V 286

Paint Up, Fix Up

Computer industry superpowers are pulling together to revolutionize the operating system platform on which PC applications are based. OS/2 is nothing less than a floor-to-ceiling renovation of the current programming environment. Look forward to a far more robust, if more expensive, operating environment.

But just as with home remodeling, many smaller companies are finding more economical ways to offer increased memory addressability, multitasking, and a graphic user interface. Digitalk, for example, has introduced *Smalltalk/V 286*, an object-oriented programming environment for 80286- and 80386-based computers that offers in-

house and commercial application developers a form of multitasking, as well as the ability to address large memory blocks. Running under DOS, *Smalltalk/V 286* takes advantage of the protected mode of the 286 and 386 chips to address up to 16MB of extended memory directly. You can develop controlled applications for multiple, simultaneous processes—sorting a data base in the foreground, for example, while communications are conducted in the background.

Unlike those that run under OS/2, *Smalltalk/V 286*-based applications will not interact with programs written in other languages. Each process is restricted to its own reserved memory space and must queue up for processor time based on its relative importance to other processes competing for the CPU at a given instant. But since all this happens in the blink of an eye, it *appears* as though all of these applications run simultaneously.

Because it's an object-oriented language, rather

than a logical or procedural one, *Smalltalk/V 286* applications are relatively simple in design. Such a language is better for creating a graphic interface. Programming is as easy as linking objects in point-and-shoot fashion; within the graphic, windowed environment, you can browse and select from different classes of programmable objects such as windows or pull-down menus. *Smalltalk* applications are very portable across different microprocessors: Your *Smalltalk/V 286* applications need only be recompiled to run under *Smalltalk/V*, for the 8088 processor, or under *Macintosh Smalltalk/V*.

Smalltalk/V 286, which requires DOS 2.00 or a later version, retails for \$199.95. It comes with a windowed development environment, a language, and a powerful debugger. A disk-browser window gives you access to most DOS commands, while a library provides more than 200 classes of useful application building blocks such as those for windows and menus. A paint program lets you include bit maps in applications, and a clipboard makes it easy to move objects between *Smalltalk's* windows. Extension kits for color and communications drivers cost \$49.95 each. Digitalk, Inc., 9841 Airport Blvd., Los Angeles, CA 90045; 800/922-8255, 213/645-1082.

MapInfo

Lay of the Land

You can work numerical wonders with a spreadsheet, but when it's time to make sense out of all those numbers, a graph can be even more wondrous. Similarly, data bases can swamp you with records and leave you without a way to chart a clear path through them. But now Mapping Information Systems lets you turn all those names, addresses, and notes into one or more maps with *MapInfo*.

Designed to be used as both a presentation package and a data analysis tool, *MapInfo* is built around a data base that uses *dBASE* file formats. You can enter your own data or import *dBASE III Plus* native files, as well as those from other data bases in ASCII format.

You then view that information in a variety of meaningful ways. For example, you can map your sales leads, office sites, or subscribers by region, state, city, or even more targeted geographic parameters, and use those distribution maps for sales analysis or as presentation aids. *MapInfo* automatically creates *pin maps*, whose on-screen points are as specific as street addresses, as well as *thematic maps*, which highlight user-defined regions using color, shading, and borders to define service area boundaries or delivery zones.

Use *MapInfo* to create road maps for your sales or delivery personnel. Po-

An easy-to-use, object-oriented programming language for in-house and commercial programmers, *Smalltalk/V 286* lets you multitask and address up to 16MB of memory in the protected mode of 80286- and 80386-based computers.

Right, it's efficient.
Right, it's great looking.
Costs an arm and a leg, right?

A

B

Wrong.

If you think you can't afford computer workstation furniture as up-to-date as your computer, think again.

Breakthrough prices. The basic workstation (drawing A) costs less than \$275. For under \$580, you can set up the intermediate workstation (drawing B). And the full featured workstation (drawing C and photo) is less than \$1195. Since the WorkManager™ System is modular, you can start small and add on as your needs—and resources—grow.

Breakthrough design. The WorkManager™ System has the ergonomics of high-priced designer furniture systems. The work surface

is the perfect typing height for computer keyboards, and features a comfortable beveled leading edge. A covered, recessed channel holds cables and surge protectors. Built-in sockets handle WorkManager™ accessories.

Breakthrough construction. Strong, lightweight structural components are molded of steel reinforced Resinite™ composite. Molded-in color makes surfaces highly scratch resistant.

The WorkManager™ System. For people who need workstations as advanced as their computers—from the people at MicroComputer Accessories, Inc.

WORKMANAGER™

MicroComputer
Accessories, Inc.

lice departments could use the program to track crime sites, fire departments could pinpoint neighborhood fire hazards, and retail chains could use it to describe market areas around store locations. Points on each map are accurate to within 60 feet and can be viewed from the perspective of up to 5000 miles out in space using the zoom feature. You can color-code different areas to reflect different demographics. Towns, streets, highways, even railroad tracks can be displayed graphically.

Mapping Information Systems sells several add-on data bases with a variety of additional demographic and mapping data that let you address your special needs. For example, the \$195 *MapPack Sampler* provides a digitized map of the United States with point locations of 5000 U.S. cities, boundaries of all the states, ZIP codes, and telephone area codes, plus an overlay map of the interstate highway system.

You can use *MapInfo*'s data base of street maps covering more than 330 metropolitan areas and thousands of suburbs to locate a street address and then open a window that displays the record for that address. The maps interact directly with the data base so that editing in one updates the data in another. Maps are redrawn instantly when the data changes or the information is examined from another perspective.

The program supports a wide variety of printers

Make all of those names, addresses, and notes in your data base truly meaningful by turning them into maps with MapInfo. Create pin maps of your sales locations or road maps for travel between locations.

and plotters, and files can be exported to other programs such as *Ventura Publisher* and *Harvard Presentation Graphics* for adding maps to documents that accept the CGM (Computer Graphics Metafile) format.

MapInfo requires 640K of memory, a hard disk, and DOS 2.00 or a later version. It supports CGA, EGA, VGA, Hercules, and some higher resolution boards such as the IBM 8514A graphics adapter. The core program is priced at \$750; digitized maps/data bases are sold separately for \$95 to \$2000. Mapping Information Systems, 200 Broadway, Troy, NY 12180; 800/327-8627, 518/274-8673.

TASK-force

Big Deal for Small Biz

The 1980s are likely to go down in history as the decade of the entrepreneur, as small businesses spice

up the economy with hordes of innovative products and jobs. But small businesses—particularly those based at home—often lack the financial expertise found in larger firms, and that costs them plenty.

The 20,000-member American Home Business Association (AHBA) figures that the average person working out of the home spends the equivalent of one day a week just keeping the books. The association and Blue Chip, a maker of low-end PCs, have introduced *TASK-force*, an accounting package they figure can cut that time down to 2 hours a week, saving the average home-based business more than \$8700 a year.

The \$159 business management program targets the 13 million or so Americans whose morning commute consists of a stroll to the den or the kitchen table. Developed as a result of AHBA market research, *TASK-force* is a

menu-driven, all-in-one small-business package that includes accounting as well as desktop accessory modules.

You can start out with a job estimate, then turn it into an invoice with one or two keystrokes. With a few more simple commands, *TASK-force* ages that invoice, keeps track of who owes you money, writes statements, reports payables, balances your checkbook, creates a balance sheet, and generates a profit and loss statement at any point in the program. No inventory checking is provided since the program is designed primarily for service-oriented businesses that don't stock products.

Other features include a spreadsheet, a word processor, a spelling checker, a list manager, graphics (pie charts and bar graphs), communications, and desktop utilities such as a calendar, memo pad, calculator, clock, and DOS disk manager.

The AHBA says its research consistently shows that home-based businesspeople don't adapt successfully to existing business management software. These entrepreneurs find a large gap between personal financial management software—which isn't designed for business support—and the more complex management and accounting programs developed for larger businesses. *TASK-force* intends to fill that gap, and Blue Chip hopes you'll run the program on one of its low-cost PCs.

The RAM-resident package requires 512K and DOS 3.10 or a later

Network Wish List:

- ☐ 80386 Server, \$5000.00
- ☐ Laser Printer, \$2495.00
- ☐ 300 MB Hard Disk, \$1700.00
- ☒ Group Productivity Software, \$1395.00

There are many ways to improve network performance, but only one way to improve the performance of the people who use your network: Office Works.

Office Works puts five of the most important office functions in one place:

Electronic Mail: Send messages to any individual or group of Office Works users on your network. Office Works allows you to designate message priority and send messages to people not on your network via FAX, Telex or regular mail.

Calendar: Office Works takes the toil out of scheduling meetings with individuals or groups by automatically finding the least conflicting times available, "penciling in" a time and asking the individuals involved to please confirm. Calendar also excels at keeping everyone aware of crucial deadlines.

Document Control: A dynamic indexing system for your computer files and programs, documents, paper files and other items.

Name, Address & Telephone Database: Provides easy access to vital information on clients, vendors and other contacts. Select, sort and print mailing labels, envelopes and even Rolodex™ cards.

Telephone Messages: Office Works notifies you of calls to return. You get all the important information; date and time, caller's name and number, type and text of message. Plus, Office Works can dial your phone from the number in the message.

For more information and an interactive demonstration diskette of the number one item on your Network Wish List, mail the coupon today.

Paragon 286V

Get It All, Keep It Small

Some computer vendors give you lots of empty slots in a big box. Others put everything but the kitchen sink on the motherboard and squeeze it into a small case with only a couple of available I/O slots. Still others focus on high performance with advanced features like a fast processor or high-resolution display adapter. American Mitac lets you have it all with the Paragon 286V—high integration, advanced features, lots of slots, a competitive price, and a small footprint.

You get a 12-MHz 80286 processor switchable to 8 MHz, up to 8MB of memory, VGA graphics, six empty slots on an AT bus, and room for three storage devices—all in a 14-by-16-by-6½-inch form. Mitac packs so much in such a little package by moving many control functions and all the main memory onto the motherboard. The VGA resides there, as does the controller for two types of floppy drives. The Paragon 286V has 1MB of memory, with room for another 7MB on the motherboard via 1MB memory modules. You can run your VGA monitor and load up on memory without touching a slot.

The expansion bus has five 8/16-bit slots and one 8-bit slot. The Paragon 286V supports the Lotus/Intel/Microsoft Expanded Memory Specification 4.0 and gives you both a stan-

dard 9-pin digital connection and a 15-pin PS/2-type analog connection for your monitor.

The base configuration includes one 3½-inch 1.44MB floppy drive and a 5¼-inch 1.2MB unit, two serial ports, one parallel port, a clock/calendar, and a 101-key keyboard. You also get DOS 3.30; GW BASIC; and five memory, disk, and display management utilities—all for \$2195.

You can choose a 14-inch color VGA monitor for \$549 or a 12-inch monochrome VGA monitor for \$210; a 40MB, 28ms hard disk and controller go for \$734. American Mitac Corp., 410 E. Plumeria Dr., San Jose, CA 95134; 800/648-2287, 408/432-1160.

Mitac's Paragon 286V boasts high system-board integration, advanced features, lots of slots, a competitive price, and a small footprint.

BRIEFLY NOTED

3000 NL, 1000 TL, 1000 SL

Tandy Corporation/Radio Shack has upgraded several models in its PC line, adding more complete integration, faster processing, and more memory options. Tandy has replaced the 3000 HL, popular among its mainstream business customers, with the 3000 NL, which includes a 10-MHz 80286 processor instead of an 8-MHz one. Its seven expansion slots include four 8/16-bit and three 8-bit slots, as well as a dedi-

cated memory slot that runs at processor speed regardless of how fast the bus is running. The company claims it delivers as much as a 30 percent performance gain.

The 3000 NL ships with 512K of memory, expandable to 640K on the motherboard, and up to 16MB using two add-on cards. It's also equipped with one 3½-inch, 1.44MB floppy drive—instead of the 3000 HL's 5¼-inch drive—with room for another 3½-inch device and two 5¼-inch drives. Also standard are a parallel port, a serial port, and a 101-key keyboard. The base configuration, which includes an 80287 coprocessor slot, retails for \$1699. The monitor, its adapter, and hard drives are extra. Tandy offers a \$250 EGA adaptor that drives a monochrome or color digital monitor, and a \$400 VGA adapter for use with your choice of a monochrome analog or either of two color analog monitors.

Tandy also has upgraded its low-end PCs. The 1000 SL replaces the 1000 SX, and the 1000 TL replaces the 1000 TX. The 1000 SL has an 8086 microprocessor instead of an 8088, while the 1000 TL has an 80286; both are switchable between 8 MHz and 4.77 MHz. The SL ships with a 5¼-inch drive, the TL with a 3½-inch; both have room for two additional drives of either size.

All five 8-bit slots are free, since the motherboard includes a video adapter for monochrome text display, as well as

C>ERASE *.*

Are you sure (Y/N)?_

«« Data Guardian »»

New Disk Optimizer® gives you the courage to say yes!

Introducing Disk Optimizer 4.0. Now with Data Guardian™ and Undelete.

It's the moment of truth.

You've decided to erase an entire directory, and your computer asks, "Are you sure?"

Well? Are you? Is it the right directory? Will you ever want these files again?

Enter new Disk Optimizer 4.0 with Data Guardian. The only disk utility software that lets you blithely say "yes" now, and if you want, change your mind later. Because only Data Guardian ensures that anyone can *Undelete* files, directories, even entire disks. And do it hours, days, up to weeks later, no matter what else you've written to your disk in the meantime.

Best of all, Data Guardian makes file recovery quick, easy and totally fool-proof. Without the complexity of other data recovery software. And without the uncertainty. Thanks to Data Guardian, Disk Optimizer comes through for you every time.

You formatted what drive?

That's fine for erased files, you say. But what happens if you accidentally format your hard disk? No problem.

Disk Optimizer comes through again with *UnFormat* that can instantly restore all the data on your disk to exactly where it was before that little slip of the finger on the keyboard.

And to make sure your data is really safe, the *TrackSaver* feature protects the surface of your disk from excessive wear by preventing the head on your drive from spinning over the same track for too long. And the *Refresh* program prevents the bad spots that develop on disks due to fading magnetic charges.

Still the safest buy in performance optimizers.

As always, Disk Optimizer also gives you the safest, most advanced performance optimization available—proven by over a quarter of a million users.

The *Optimize* program speeds up disk reading and writing times by up to 300 percent by un-doing the file fragmentation that takes place

naturally over time. The *DOConfig* program lets you arrange the layout of your disk for best overall performance. And the *Analyze* program gives you a graphical look at the condition of your disk, so you'll always know when it's time to optimize again.

A total of 17 different programs.

Disk Optimizer includes *Findfile* for locating files by name or wildcard anywhere on your disk. *Sorts* for re-arranging files and directories in the way that makes sense to you. *Lock* and *Unlock* for password-protected file security. *Killfile* for erasing sensitive data permanently. And lots more.

In all, there are 17 different programs in the new Disk Optimizer. Each one designed to improve performance, guard your data, and make disk management easier and simpler for everyone.

So get new Disk Optimizer 4.0, and get more than the courage to say yes. Get the peace of mind and total confidence that your disk is running better and safer all the time.

The 3000 NL, 1000 TL, and 1000 SL bring increased integration, faster processing, and more memory options to Tandy's PC line and replace the 1000 SX and the 1000 TX.

Hercules or CGA graphics with 16 colors at 640 by 200 resolution. Another added feature is three-voice sound with a digital-to-analog-to-digital sound converter enabling you to record, store, and play back true speech and music from any analog source.

Both models feature Tandy's autoboot capability with DOS version 3.30 in 512K of ROM. Tandy's Deskmate environment, which contains the Deskmate desktop utilities, a mouse driver, and an 80,000-word spelling dictionary, is also contained in ROM and comes up when the system boots. The 1000 SL is aimed at the home and education markets; the 1000 TL is intended for small to medium-size businesses.

Without monitors, the 1000 SL retails for \$899

and the 1000 TL for \$1299. Tandy Corporation/Radio Shack, 1800 One Tandy Center, Ft. Worth, TX 76102; 817/390-3011. Reader service number 748

Who/What/When Office

Chronos Software offers a way to coordinate the people and resources of a networked work group using its *Who/What/When Office* scheduling package. At the heart of *Who/What/When Office* is a daily calendar for each member of your work group. Individuals can enter details of meetings: whom he or she is seeing, what the meeting is about, and when and where it is to take place. There is room for scheduling group meetings, prioritizing to-do lists, delegating tasks, and describing

projects. The information is then cross-referenced into three views.

The People view displays the projects and schedules of the people with whom you work. The Project view displays current projects, the people involved, milestones, and deadlines. The Time view displays the daily calendars of all your fellow network members, whom they are seeing, and the subject matter. The program automatically prompts for available time slots for work group members and shared resources such as conference rooms, and it checks for conflicts.

Who/What/When Office coordinates projects, updating team members on any changes. Using *Who/What/When Office's* memo function, a meeting agenda can be sent throughout the network. The program supports external modem communications and recognizes group as well as individual mailboxes.

Who/What/When Office produces automated management reports on a per-person or companywide basis. Time reports include daily schedules, company calendars, and monthly overviews. Project reports, including Gantt charts and project calendars, show what responsibilities have been delegated, what tasks have been completed, and what remains to be done. People reports show all delegated tasks and work that are shared with another person or project.

Who/What/When Office runs on any server com-

patible with DOS 3.10 or as a value-added process under Novell's *Netware 2.1* or a later version. *Who/What/When Office* retails at \$695 for a 30-user, single-server license and \$75 for each user manual. Chronos Software, 1500 16th St. #100, San Francisco, CA 94103; 415/626-4244.

Extend-A-Name

World Software breaks the DOS 8-character barrier with a memory-resident product that lets you use up to 60 characters to name a file. *Extend-A-Name* is compatible with all popular text-mode PC packages that prompt you to type in a file name. At that prompt, *Extend-A-Name* pops up with its own directory of extended names; you then select your file using a highlight bar and <Enter>. Up to 12 file or subdirectory names can fit on the screen at one time.

You can name a new file with a more complete description, such as "Balance Sheet—Fiscal Year 1988." You also have the option of either creating a second, 8-character name that DOS will recognize, or letting *Extend-A-Name* create one for you consisting of your initials and a number sequence. While *Extend-A-Name* is on screen, you also have access to common DOS commands for file management.

Extend-A-Name requires 39K of memory for up to 100 file names per subdirectory, and up to 65K for 400 file names. Compatible with EMS

WHAT TO DO IF YOU YEARN FOR THE POWER OF A 386, BUT CAN'T GET THE TREASURER TO YEARN QUITE AS HARD.

Introducing the NEC PowerMate® SX and PowerMate Portable SX. 386 power without the 386 price.

You've probably been through it before. Trying to get the company treasurer to approve funding for your dream machine: a 386 computer. And always with the same results.

From now on things will be different. Thanks to the new PowerMate SX and PowerMate Portable SX.

We're not talking about a sale here. Or a clearance. This is a technological breakthrough that will bring mainstream business users to a whole new plateau of power. And all without having to go crawling to the company treasurer for approval.

How on earth is this possible, you ask. Simple. These SX machines, based on the new Intel 386SX™ microprocessor, use the same 32-bit memory architecture as all other 386 systems. The difference is, our new SX uses a classic 16-bit data bus, which means they're compatible with existing hardware and software.

The result? Now you can run industry standard operating systems like MS-DOS®, OS/2™ and XENIX®. As well as handle all the other sophisticated 386 operating systems, application

software and operating environments you've been dreaming about like UNIX® System V/386, Paradox 386 and Windows/386.

The PowerMate SX and PowerMate Portable SX join the most comprehensive line of high quality, industry standard personal computers in the world. And every one of them is manufactured right here in the USA, backed by NEC, a \$17 billion company.

The PowerMate SX and PowerMate Portable SX. Exactly what you (and the treasurer) have always yearned for: 386 power without the 386 price. For more information, call NEC Information Systems at 1-800-343-4418.

NEC

C&C Computers and Communications

Software compliments of Microsoft Corporation.

NEC Information Systems, Inc., Dept. 1610, 1414 Massachusetts Ave., Boxborough, MA 01719.

Do away with the 8-character file name limit—memory-resident **Extend-A-Name** lets you create file names of up to 60 characters.

3.2, it needs only a 3K kernel in conventional memory. The default hot-key configuration, <Alt>-X, can be changed to any <Alt>-key combination.

Extend-A-Name requires DOS 2.00 or a later version and retails for \$79.95. World Software Corp., 124 Prospect St., Ridgewood, NJ; 201/444-3228.

Battery Watch

Portable computing specialist Traveling Software has a new utility that lets you know exactly how many hours of use are left in your laptop's batteries before they need to be recharged. *Battery Watch* monitors all of the battery-draining functions in your laptop every 2 seconds and gives you the remaining battery time in hours and minutes. A fuel-gauge-like graphic automatically pops up in a

window when you're running out of juice.

The package, which works with both nicad and lead-acid batteries, requires from 15K to 18K of memory. *Battery Watch* also boasts a "deep-discharge" feature, which counteracts the tendency of nicad batteries to lose operating time between recharges due to the "charge memory effect." The deep-discharge utility completely drains the battery before recharge. *Battery Watch*, which retails for \$39.95, is compatible with laptop models from Zenith, Toshiba, Epson, Quadram, IBM, NEC, and Tandy. Traveling Software, Inc., 19310 N. Creek Pkwy., Bothell, WA 98011; 206/483-8088.

Microsoft Word Companion Disk

Help! Those four letters say it all. When your plea goes out, the last thing you want to do is plow

through your user manual for obscure references to cryptic error messages. Nor do you want to languish on hold over a long-distance technical support line—assuming your warranty hasn't run out—especially if your business also is on hold until you get the computer up and running again.

What you want is intelligent help at your fingertips, which is precisely what the Advanced Quick Help feature provides for *Microsoft Word 4.0*. Taking advantage of Word's context-sensitive Help command, Advanced Quick Help replaces the program's current help messages with insights from Peter Rinearson, a Pulitzer prize-winning author of three books on *Microsoft Word*. Instructions are ad hoc and far more extensive than those that ship with *Word*.

But Advanced Quick Help is only one of 23 files on Rinearson's *Microsoft Word Companion Disk*.

Other files contain more than 300 macros and a variety of style sheets, sample print-merge letters, and other utilities.

The macros are organized into several libraries. One contains 80 general-purpose macros that copy text to a file, update summary sheets, print envelopes, zoom windows, and so on. Another library contains 14 macro modules that can be attached to specific *Word* modes. Other libraries contain glossaries that help you write your own macros or that teach *Word* to recognize *WordStar* commands.

The *Microsoft Word Companion Disk*, which retails for \$19.95, is available from Rinearson Support Associates in 5¼-inch or 3½-inch format. 219 First Ave. N #410, Seattle, WA 98109; 800/345-9111.

Reader service number 752

One of 23 files on the *Microsoft Word Companion Disk*, Advanced Quick Help replaces the program's current help file with extended assistance. Also available are more than 300 macros and a variety of style sheets, sample print-merge letters, and utilities.

At last there's a way to make better looking presentations with less work.

Introducing Pinstripe Presenter.™

In the past you had two choices: you spent days with a graphic designer or you struggled with cumbersome presentation software. Now there's Pinstripe Presenter.

With its many pre-formatted graphic styles you can produce compelling, professional looking slides, overheads and handouts.

Everything you need.

You can create word charts, business graphs or freehand drawings, one at a time or combined on a single slide. Choose from among 8 chart types including text, pie, line, area, table, stacked bar, and horizontal bar. Both 2D and 3D types are included. And use the draw program and clip art library to add snap to any slide.

Professional looking results every time.

When it comes to making visuals—relax. The automatic layout feature does all the work for you. Each type of chart has 13 pre-formatted styles to choose from. Graphic designers have fine tuned each style including fonts, margins, spacing, justification, text sizing, and color schemes.

No experience necessary.

On-screen prompts, obvious menus, and context sensitive on-line help make it easy to learn Pinstripe Presenter in record time. The quick start guide will take you through your first presentation in under 1 hour.

Rush jobs welcome.

Save time by selecting the menu option to transmit your presentation via modem to a MAGICorp slide center for 24-hour delivery. Pay less than half the typical price per slide charged by commercial slide making services. And you can use your printer to create overheads and paper copies in minutes.

Price: \$199.95

Available at software dealers everywhere, or call 1-800-826-0706 to order.

OPTune

Gazelle Systems has introduced an all-in-one hard disk survival, repair, and tune-up utility to ensure that your hard drive operates at maximum efficiency. Like other disk optimizers, the \$99 *OPTune* gathers scattered file fragments into sequential clusters, but only this program offers additional seek-speed enhancements.

For example, *OPTune* sorts file and directory entries and puts them in one place at the front of the disk; this speeds up directory searches, enables programs to load faster, and reduces head wear. The program eliminates erased file entries, giving you slimmer directories and potentially more disk space.

The program also lets you set your hard disk's interleave (which *OPTune* determines) for optimum synchronization with other elements of your controller, thereby improving speed as much as 300 percent. *OPTune* uses 256-

bit-wide test patterns to identify bad disk sectors and moves data from bad clusters to reliable areas of the disk. For extra insurance, every time it's run, the program backs up your file allocation table and root directory and saves them in a hidden file in case the originals are damaged.

OPTune, which features pulldown menus and automatic help screens that appear as each feature is selected, requires DOS 2.00 or a later version and 256K of memory. Gazelle Systems, Inc., 42 N. University Ave. #10, Provo, UT 84601; 800/233-0383, 801/377-1288. Reader service number 753

EFAX-88

The overnight letter was a first step toward instantaneous information exchange, and it quickly became a hit. But today, personal facsimile machines can often do the job faster.

The Avotex EFAX-88 is a reasonably priced, 20-second-per-page personal copier/fax with an adjustable scanning mode for transmitting both graphics and photographs.

For those seeking the basics, the Avotex EFAX-88 personal copier/fax unit may fill the bill. Its \$1149 price is about average for its range of capabilities, which includes a reasonably fast 20-second-per-page transmission speed, an adjustable scanning mode for transmitting graphics and photographs, and a manual switch that allows you to transmit documents in the midst of a phone conversation.

The EFAX-88's fallback feature guarantees error-free transmissions by automatically adjusting its rate from 9600 bps to 7200, 4800, 2400, and below if line problems crop up. Weighing less than 10 pounds, the EFAX-88 can perform as a personal copier. A 110/220 voltage selector and an optional acoustic coupler also make the EFAX-88 a practical unit on the road. Elec & Eltak (U.S.A.) Corp., 1230 Oakmead Pkwy.

Harvard Project Manager 3.0

Software Publishing Corporation (SPC) has added a fast-tracking capability and outlining to enable novice project planners to make quick use of version 3.0 of *Harvard Project Manager*. The fast-track mode lets new users begin planning a project within 15 minutes. You enter task names and durations along a time scale, and *Harvard Project Manager 3.0* builds PERT and Gantt charts as well as a work-breakdown outline and a task list. The outline separates a project into its component tasks, each of which can be explored in greater detail by going to a deeper level of the outline.

SPC has also added calendars that note vacations and equipment commitments to be considered when scheduling resources; version 3.0 offers additional reporting capabilities, including the ability to run reports from a batch file and to create report templates, scaled reports, and E-size plots.

Harvard Project Manager 3.0 offers enhanced PERT views, including a PERT logic view and the ability to zoom a portion of the chart and track penalty costs. It can take advantage of extended memory and 43-line displays and has additional import/export capabilities. *Harvard Project Manager 3.0*, which requires 512K, DOS 2.00 or a later version, and a hard disk, sells for \$695. Up-

Harvard Project Manager's fast-track module helps novice users begin planning a project within 15 minutes, quickly building PERT and Gantt charts and breaking projects down into specific tasks.

grades are available for \$135. Software Publishing Corp., 1901 Landings Dr., Mountain View, CA 94039-7210; 415/962-8910. Reader service number 756

DeskJet Landscape Upgrade Cartridge

Hewlett-Packard has added a landscape option to its DeskJet ink jet printer. Especially useful for printing spreadsheets or tabular reports sideways, the landscape option uses Courier 16.67 pitch. You plug the cartridge into one of the printer's two expansion slots and select Courier 16.67; an LED indicates which font has been selected. The cartridge also supports bold-face, super/subscripts, underlining, and double- and half-width letters.

Additional fonts are available in a second font cartridge, called the Landscape Fonts Cartridge, which includes Courier 10, Letter Gothic 12 (portrait) and 16.67 (landscape), and Letter Gothic Italic 12. Each cartridge costs \$95.

The \$995 DeskJet already supports Courier, Courier Bold, and Courier Compressed fonts. It prints full-page graphics at 300 dpi and text at either 120 cps in letter quality or 240 cps in draft mode. Hewlett-Packard Co., 3000 Hanover St., Palo Alto, CA 94304. Reader service number 757

Foxbase + 2.10

FoxBase + 2.10, the dBASE-compatible data base manager, now has a series of customizable templates that aid in data entry and screen editing. The FoxView template lets you paint screens with color and draw lines and boxes on them. FoxGen produces data base applications that can run as is, without programming, or that you can modify to your liking. Both modules generate code that FoxCode compiles into compact, executable applications.

You can call any of the three template modules from the *Foxbase +* dot prompt or DOS. A new virtual-memory-management system writes *Foxbase +* to disk, creates a view of the operating environment, and automatically returns you to prior programming status when the template concludes operation. *Foxbase + 2.10* also comes equipped with a variety of default templates, found in pop-up and pulldown menus, that let you perform other common application- or report-building operations without programming.

Also included is FoxDoc, a technical documentation system that lets you analyze an application and develop detailed summaries of variable cross-reference, tree-structure, data-dictionary, index, format, label, and report files, as well as other types of reports. *Foxbase + 2.10*, which requires DOS 2.00 or a later version, 360K of memory, and a hard disk, retails

Dr. Robert Ronstadt, creator of Ronstadt's Financials, is one of the nation's most widely-published authorities on entrepreneurship.

"Preparing financial projections doesn't have to be difficult. It's the software that people use that makes it that way."

"If more businesses had the benefit of comprehensive financial guidance, there would be more successful businesses."

Financial Projections Fast and Easy

SPECIAL
INTRODUCTORY OFFER!
\$199.

No one has the secret to success. But there's one thing nearly every successful business has in common. And that's a comprehensive set of financial projections.

But try creating them on a spreadsheet program and you'll spend days programming, formatting and checking for errors before you get any results at all.

Now, Dr. Robert Ronstadt, one of the nation's most widely-published authorities on entrepreneurship, has developed Ronstadt's Financials™, the only software specifically designed to prepare complete financial projections faster, more accurately, and more flexibly than any other way.

Just enter the operating assumptions for your business on a single, on-screen form and you'll automatically generate income statements, balance sheets, cash flow projections, and more. All the reports you need to plan, finance and operate any enterprise.

Tailor the program to your needs by customizing one of the eight industry models that

come with the program. Or create your own from scratch. Then explore alternative financial strategies in a matter of minutes.

Dr. Ronstadt will even guide you through the principles of sound financial planning in his newest book, *Entrepreneurial Finance*, also included with your program.

Get the confidence you need to proceed with your venture—and the financial information you'll need to succeed. Get Ronstadt's Financials today.

Call us for information about Ronstadt's Financials, and to request the Trial Pack at \$9.95, or to order the complete package for \$499. Also available at leading software dealers nationwide.

For more information, simply complete and return this coupon to Lord Publishing. Or call today.

EMS 4.0 expanded memory support and enhanced memory management are the new features in Actor 1.2, the object-oriented programming language for the Microsoft Windows environment.

for the same \$395 as prior versions; upgrades are \$75. Fox Software, Inc., 118 W. South Boundary, Perrysburg, OH 43551; 419/874-0162.
 Reader service number 758

Actor 1.2

The Whitewater Group has added expanded memory support to version 1.2 of Actor, its object-oriented programming language for the Microsoft Windows environment.

Actor 1.2 lets you use up to 500K of expanded memory under EMS 4.0 for each programming session, and it fully supports the calls, messages, and menu styles of Windows/286. Actor 1.2 handles the memory management chores and produces stand-alone Windows applications that follow all of the environment's conventions for dynamic data exchange and linkage with Microsoft C code. Whitewater provides add-ons

for its interactive language, including the \$99 *Language Extensions I* disk with macro capability, conditional compilation, object storage, ordered dictionaries, and other facilities.

Actor 1.2, which retails for \$495, is shipped with a run-time version of Windows/286. Registered users can upgrade for \$80 or get the upgrade free if they purchase unlimited support for \$250. The Whitewater Group, Technology Innovation Center, 906 University Place, Evanston, IL 60201; 312/491-2370.

Turnkey 3.1, Turnkey 3.1 Menu Builder's Version

Optimal Solutions has introduced both an update and a developer's version of its Turnkey menu-building utility. Equipped with the 1-2-3-like inter-

face that is Turnkey 3.1's major enhancement, Turnkey 3.1 Menu Builder's Version also lets you create executable run-time versions of menus that your fellow work-group members can use but not change. Written in the dBASE-compatible Clipper compiler, Menu Builder lets you produce faster-running menus that use less memory.

Since neither version is memory resident, your applications can use all the system memory. You can create as many as 1000 nested menus containing up to 15 choices each, and add password protection to each menu item if you wish. Menu Builder features on-line help with context-sensitive messages. Because it's so easy to use, Turnkey and Menu Builder ship without manuals; all documentation is on line.

Turnkey 3.1 retails for \$49. Upgrades from Turnkey 3.0 are available for \$10; menus written with earlier versions are

not usable under version 3.1. Turnkey 3.1 Menu Builder's Version sells for \$295 with a run-time license for 100 users. Both 3.1 packages require DOS 2.00 or a later version, 256K of memory, and a hard disk. Optimal Solutions, 6 Salem Rd., Atkinson, NH 03811; 603/362-4758.

Accpac Plus Windowing System Manager, LanPak

Computer Associates has beefed up its Accpac Plus accounting system with Windowing System Manager and LanPak, which are more powerful and versatile than the company's previous windowing and LAN modules. Windowing System Manager provides an advanced

The Accpac Plus accounting system has gained a new Windowing System Manager with an advanced macro facility, enhanced information searching, and multitasking as well as an enhanced LAN interface.

Why LAP-LINK Has Connected Over 200,000 Computers.

In less than two years, LAP-LINK has connected over 200,000 computers to become the standard in accessibility software for IBM's and compatibles, laptops, and Apple Macintosh computers.

But outstanding sales aren't the only way to recognize great software. Consider what the experts have to say.

Fast and accurate.

"...LAP-LINK...sets a record for the fastest serial transfer on a P.C." Howard Marks, P.C. MAGAZINE—July 21, 1987. And LAP-LINK is not only the fastest, it's also the most accurate. LAP-LINK's error checking system guarantees that all data is transferred with 100% accuracy.

Easy to set up.

"LAP-LINK is the absolute easiest, simplest and most convenient." Harry Newton, TELECONNECT—April, 1987. LAP-LINK comes with everything you need to set it up—including 3½" and 5¼" disks, documentation, and Traveling Software's universal cable with both 9-pin and 25-pin connectors.

Easy to use.

"...I don't know if the manual is any good or not: I've never had any reason to open it. LAP-LINK is so thoroughly intuitive, fast and simple to use, the manual is blooming near superfluous." Jerry Pournelle, BYTE MAGAZINE—July, 1987. All you need to do is connect our high quality universal serial cable (no need to unplug your printer's parallel cable), type "LL" on both computers and LAP-LINK will automatically connect itself, ready to transfer single files, entire sub-directories, or hard disks.

Award winning.

"If you like a package that's fast, efficient, and easy to use, LAP-LINK is clearly the...program of choice." M. David Stone, P.C. MAGAZINE—January 12, 1988. P.C. Magazine

was so impressed with LAP-LINK's performance that they gave it their Editor's Choice and "Best of '87" awards.

LAP-LINK

LAP-LINK transfers files between IBM and compatibles, laptops and desktops, including the new IBM PS/2. It installs in seconds, features a split-screen design for showing files in both computers, and transfers data at incredible speeds of over 115,200 baud.

LAP-LINK Plus

With all the simplicity and file transferring capabilities of LAP-LINK, LAP-LINK Plus also offers the option of direct disk drive and printer sharing between any two connected computers. It's like having a two computer network. You can easily switch between local and remote printers using a pop-up window without leaving your application.

LAP-LINK Mac

Everything you need to share files between any model of the Apple Macintosh (512, Plus, SE and Mac II) and an IBM compatible laptop or desktop computer (including the IBM PC, XT, AT, and PS/2). It's easy to use and it's fast, over 57,000 baud. LAP-LINK Mac is also fully compatible with both Macintosh Finder and MultiFinder, as well as AppleTalk, TOPS, and 3Com.

So for the best Accessibility Software, stop by your local computer or software dealer today. Or call us at: 1-800-343-8080 or in Washington: 1-206-483-8088. Ask about our free catalog.

LAP-LINK is surprisingly affordable at \$129.95, LAP-LINK Plus \$139.95 and LAP-LINK Mac \$139.95 (Suggested retail prices including cable).

macro facility, enhanced information searching, and the ability to switch between different *Accpac* applications in a windowed environment. The macro facility, which includes a macro recorder, lets you automate routine tasks like month-end accounting and supports error-checking parameters (such as imposing credit limits) that reduce the possibility of data entry mistakes.

Windowing System Manager doesn't permit data exchange between windows, but an advanced data-search function, SmartFinder, uses artificial intelligence techniques to reduce the need for precise queries. Type some letters in the SmartFinder window and it searches through all *Accpac* master files—including customer orders, inventory, and general ledger—to find partial matches and similar-sounding words.

LanPak provides an interface between network software and *Accpac Plus* applications. It's compatible with Novell *Advanced Netware*, 3Com 3+, IBM's *PC LAN Program*, and all DOS 3.10-compatible networks. Different work-group members can share the same data while tasks such as accounts receivable, order entry, and accounts payable are divided among them.

Windowing System Manager, which retails for

\$195, replaces the current *EasyPlus Windowing System*; *LanPak*, which offers a four-user license for \$395, replaces the *Network Manager*. Upgrades are free to anyone who purchased the earlier products after October 15, 1987. For anyone who purchased the program before that date, there is a \$50 charge for the *Windowing System Manager* and a \$100 charge for the *LanPak*. Computer Associates Int'l, 1240 McKay Dr., San Jose, CA 95311; 408/432-1727.

Media Master 5.0

Intersecting Concepts has released an upgrade of its disk-to-disk formatting utility for IBM PS/2 computers. *Media Master 5.0* enables PCs, PS/2s, and compatibles to read, write, and format more than 200 types of CP/M, DOS, and TurboDOS disks so that you can share information between incompatible computer systems. You also can customize the software using setup files. Other improvements include on-line context-sensitive help, full-color support, first-letter menu selection, and an easier installation procedure. The program retails for \$49.95, but registered users can upgrade for \$23.50. Intersecting Concepts, 80 Long Court #1A, Thousand Oaks, CA; 800/422-8018.

Tandy® Computers: The broadest line of PCs in America.

The Tandy® 4000 LX

Get the power
and performance
of Intel's 80386
...at 20 MHz.

See Us At Comdex,
Booth #1321

To complete business tasks on schedule, turn to the Tandy 4000 LX. With its 32-bit Intel® 80386 micro-processor operating at 20 MHz, the 4000 LX delivers a new level of performance to sophisticated database management and spreadsheet analysis.

Two megabytes of zero wait-state memory make the 4000 LX ready to use with MS® OS/2, as well as MS-DOS® software. With this much memory standard, the Tandy 4000 LX is also ready to use as the hub of a powerful multiuser office system running SCO® XENIX® software. And as

a network file server in a 3Com® workgroup, the 4000 LX provides 20 MHz performance for exceptionally high-speed data transfer.

The Tandy 4000 LX is highly expandable. Three front-panel device slots and eight expansion slots give power users the flexibility needed in configuring the optimum system.

And for entry-level 386™ power, we offer the original Tandy 4000. Using an 80386 processor that operates at 16 MHz, the 1MB Tandy 4000 is the perfect low-cost choice for the heavy power user.

The new generation Tandy 4000 LX. From the best-selling family of PC compatibles made in America.

GOT TWO OPTIONS: Selling \$6,000 with Excel...or take Selling \$6,000 with SuperCalc5.

\$6,000 for every workstation.

There is another choice. It delivers everything you expect from the spreadsheet of tomorrow. The choice is *SuperCalc5*.

Introducing SuperCalc5.

Tomorrow comes in a blue and red box. *SuperCalc5* is the spreadsheet of the future, ready for you today. First of all, it works with the hardware you most likely have on your desk right now, including all IBM PC, XT, AT and PS/2 models and compatibles with 512k memory.

SuperCalc5 has been designed for MS-DOS and to bridge the migration to OS/2. It also supports LIM version 4.0 providing up to 32 mb of memory.

In use, *SuperCalc5* holds up to 255 spreadsheets in memory and allows you to view and manipulate any three of them on screen at any one time. Direct links can be established with spreadsheet files in memory, on disk or on a network. And these can be a combination of

SuperCalc and Lotus 1-2-3 files. There's even a version for your company mainframe called *CA-SuperCalc*.

SuperCalc5 was designed to coexist with Lotus 1-2-3. Not only does it read, write and link to 1-2-3 files automatically, *SuperCalc5* includes an optional 1-2-3 menu and can use 1-2-3 macros. You can even move Lotus 1-2-3 macros into *SuperCalc5* and then back again.

	Jan	Feb	Mar	Apr	May	Jun

Jun	1500	1900	1700	1400	1600	1100

Accuracy and speed.

Comprehensive *debugging and auditing* features are built right into *SuperCalc5*. When used along with the *undo* feature, they ensure that errors in your worksheets and macros will not cost more than you can afford.

SuperCalc5 works fast because it has *minimal recalculation* and the ability to choose recalculation ranges.

A good beginning and a beautiful finish.

SuperCalc5 has automatic installation and its intuitive command structure means that you can be up and running in a matter of minutes.

Finally, *SuperCalc5* will make your work look sensational. Your presentation will spring to life

on the page with a wide choice of graphics, charts, type fonts, bars, colors and shadings.

Two ways to try tomorrow.

Qualified prospects can take advantage of one of two *SuperCalc5* introductory programs. You can receive a copy of *SuperCalc5* to use on your present computer for 30 days with no obligation. And if you decide to buy *SuperCalc5*, get a free

copy of Silverado, the powerful relational database that works inside *SuperCalc5*. Or trade in your present spreadsheet program and get *SuperCalc5* for \$150. Both offers expire December 31, 1988. For more information or the name of the participating dealer near you, call 1-800-531-5236 (1-800-663-6904 in Canada).

- Worldwide service and support network of more than 100 offices.

Accounting • Spreadsheets • Graphics • Project Management • Resource & Operations Management

The difference

Now there's a software system that makes it easy for users to take on their most ferocious office data problems.

We call it SmartWare. You'll call it the friendliest software ever.

Between Applications

Smart includes the full range of office productivity applications: word processing, data base

A Product of
INFORMIX
Software

management, spreadsheet analysis, business

graphics and communications.

All perfectly integrated for easy transfer of data from one application to the next.

And only Smart lets you create custom programs that actually jump between applications. For instance, a single keystroke can transform a worksheet into a 3-D pie chart, paste the chart into a document, and send the document via modem to the home office.

Between Workgroups

Even if your PC isn't on a local area network (LAN) now, there's a good chance it will be. And soon.

With Smart, your entire workgroup will be ready.

Remember

Smart's "REMEMBER" command lets non-programmers create custom programs.

Send

Smart's "SEND" command makes it easy to move data between applications.

Waiting for record 1

Smart automatically protects your data in multiuser environments.

is friendliness.

Every Smart application includes fully automatic File or Record-Locking for shared data. So, right out of the box, Smart can be used either on a single user PC or on a LAN workstation.

Whether you're just getting started as a lone computer user, or you're the Manager of Information Systems supporting thousands of PC users, discover easy-to-use applications your office won't outgrow. Single user and Multi-user software for DOS, LANs, UNIX or XENIX systems: Word Processing, Spreadsheet & Graphics, Database Management and Communications.

For additional information, plus a Free Smart Demo Disk, return the reply card or call toll-free (800) 331-1763. In Kansas or Alaska call (913) 492-3800, in Canada call (800) 233-6905.

SmartWare®

LAN E-Mail: Power to the Work Group

**LAN E-mail programs have
finally come of age.**

**PC World looks at four powerful
(though sometimes pricey)
programs for networks of every
size.**

For many businesses, the convenience of electronic mail is a prime incentive for buying a LAN. The ability to shuttle messages and files throughout a work group eliminates telephone tag, streamlines group projects, and boosts interoffice communication. Yet most E-mail programs bundled with network operating systems are difficult to use, provide only primitive messaging features, and are limited to transporting text.

Luckily, a number of third-party vendors are breathing new life into this genre. *PC World's* roundup explores four new, intuitive, sophisticated, LAN-based E-mail programs that are compatible with any NETBIOS or DOS LAN: *cc:Mail* from cc:Mail, Inc.; *The Network Courier* from Consumers Software; *InBox/PC* from Symantec Corporation; and *Da Vinci eMail* from Da Vinci Systems. Each offers extensive messaging features, basic file management, a built-in text editor, and the ability to swap everything from formatted *Microsoft Word* documents to 1-2-3 worksheets to *AutoCAD* graphics over a LAN with ease.

**Gordon
Haberfelde**

Easy E-Mail

Features are a big factor in the E-mail purchase decision—but not the only one. Because an E-mail system is used by PC pro and neophyte alike, ease of use is just as important. The basic process—addressing, composing, attaching files to, and sending a message—must seem as natural as sending an interoffice memo, or the E-mail system simply won't be used.

Accordingly, all of the reviewed E-mail programs adopt a similar (and simple) metaphor. You post mail to an out-box, and you're notified by a beep or pop-up window when mail arrives in a separate in-box. You can read the mail (typically one message at a time), respond to it, delete or print it, and save messages to disk.

Just as important, all the programs sport menu-driven interfaces. *cc:Mail* and *InBox/PC* use pop-up menus that can be run with single keystrokes; *The Network Courier* relies on a 1-2-3-like command line; and *Da*

Vinci eMail works faithfully in the *Microsoft Windows* mold, complete with pulldown menus and dialog boxes. Most of the programs supply a fairly large set of keyboard shortcuts for bypassing menus.

Don't worry about installing any of the reviewed packages—that's a job for the network administrator. The E-mail program typically resides on the LAN's server—all you do at your PC is store messages. Network administrators, however, will appreciate how relatively easy these programs are to install.

Feature Rich

Of course, you get more than a cozily familiar electronic mail room for your money. You can run any of these programs except *cc:Mail* like a memory-resident utility: Press a definable hot key, jump into the E-mail program, send and receive messages, and then jump back into the underlying application. You can even cut data out of a file and paste it into an outgoing letter composed with the E-mail package's built-in (though usually crude) text editor. But there are limits.

For example, only *cc:Mail* can pull both ASCII data and graphics into a message; the rest of the programs are limited to ASCII data. Then there's *The Network Courier*, which works as a RAM-resident program but can't cut and paste data from the active, underlying application, only from a static file. *InBox/PC*, on the other hand, takes data only from an active application.

The issue may be moot anyway. Most users will probably jot a short note with the package's text editor, attach a word processed document plus any supporting graphics files, and send the result along. Attaching files is simple with all of these packages. Once you've created a message, you just supply the path and name of *any* file—worksheet, *PageMaker* document, 1-2-3 .PIC file,

FEATURES EVALUATION

LAN E-Mail Packages

Third-party mail packages aren't necessarily cheap, but they provide far more functions than E-mail programs bundled with network operating systems.

● Yes ○ No ⊖ Deficient △ Limited only by available RAM

¹ Via Windows' print-screen function.

² Only via "urgent" phone message form.

³ Print-screen images only; stored in Windows' Clipboard, which must be attached to message.

⁴ Similar result possible with program's built-in screen snapshot utility.

Harvard Graphics pie chart, whatever—and issue a few commands to strap it to your message. You can typically attach any combination of files to a message, but most of the reviewed packages limit the size of files or the number of attachments. Make sure the package you choose meets your messaging requirements.

Getting your messages across the LAN is also pretty easy. You can create mailing lists with all the packages, so a single missive is

delivered to many users simultaneously. *The Network Courier* restricts you to public lists created by the network administrator, but the rest let you design private lists. All the programs provide a "return receipt requested" feature that notifies you when your letter has been read, let you reply directly to a message and save a copy, and automatically encrypt files. All but *InBox/PC* issue carbon copies.

Message management has also taken a step forward. All of the reviewed programs display the date and sender of each message, and some let you enter subject descriptions and priority ratings. All but *InBox/PC* let you search and sort mail on such fields. Better still, most let you tag a number of files and then delete, print, or save them en masse. The winner in this category? *cc:Mail*, which does most of the above and lets you organize messages into distinct “folders”—a clever feature also used by *Lotus Express*.

Finally, if your messages need to reach other LANs, mainframes, remote PCs, or even MCI Mail, you’ll want to focus on *cc:Mail* and *The Network Courier*, which offer numerous connectivity options. Just be prepared to pay the price. For example, a *cc:Mail* module that shuttles E-mail to gatewayed LANs costs \$1295 per network. *The Network Courier*’s PROFS mainframe gateway costs a whopping \$5000. But don’t count on making the PC-to-Macintosh connection just yet. PCs on an AppleShare network running *cc:Mail* can swap messages with Macs; PC and Mac versions of *InBox* will be able to communicate in the near future.

In making your buying decision, pay close attention to features and pricing options. Connectivity may not be an issue now, but it could be later. And an E-mail program might be priced right for a small network but not for a large one.

EXECUTIVE SUMMARY

cc:Mail

LAN E-mail package

The pick of the litter. *cc:Mail* includes a full set of messaging features, offers message folders, and is the only package that can incorporate both text and graphics in messages.

	POOR	FAIR	GOOD	EXCELLENT
Interface			●	
Messaging			●	
Message management				●
Text editing				●
Connectivity			●	
Overall value			●	

↑ ↓ ← → to move highlight, F10 or ENTER to select option, F1 for help

cc:Mail

If money is no object, *cc:Mail* is the E-mail program of choice. The reviewed version couldn’t run as a RAM-resident application, but the recently released version 3.0 does. More important, the program is clearly documented, includes in-context help, is easy to use, and offers innovative features and a large number of connectivity options. (An Import/Export module even lets you create a custom gateway to any system.) Due to *cc:Mail*’s high cost, however (\$695 for 25 users and \$1290 for unlimited nodes), those with populous LANs may find *The Network Courier* a better deal. In overall value, the two packages tie for first place.

cc:Mail’s straightforward opening screen contains a centrally placed main menu and two status windows at the top that list received messages and the number of messages stored in folders. You select options from the menu to retrieve, read, send, or store messages; you pick valid addresses, options for attaching files, and so on from pop-up menus. It’s an uncluttered, hand-holding system that new users will pick up easily.

cc:Mail’s built-in text editor is clearly the best of any reviewed here, providing search and replace, margin control, and extensive block move/delete functions. Unlike its competitors, *cc:Mail* can also incorporate graph-

cc:Mail’s easy-to-use pop-up window interface hides a powerful E-mail program.

Strictly business, The Network Courier adopts a 1-2-3-style menu-bar interface.

ics in messages. Instead of using a cut-and-paste approach, however, you take a snapshot of a displayed image that converts it into a bit map. Once in the *cc:Mail* fold, you can edit the image, label it with color text, and add lines, boxes, circles, and shadings using *cc:Mail*'s built-in graphics utility. Similarly, text can be captured and manipulated with *cc:Mail*'s text editor.

cc:Mail also offers superior message management. You can sort messages by date, subject, title, or any combination thereof, and later store them in private, named folders or on a "bulletin board" where LAN-wide messages can be posted. You can have a maximum of 200 folders, each holding as many as 500 messages. On the downside, you can't assign priorities to messages, nor can you tag them for global deletion, copying, and so on.

Version 3.0 of *cc:Mail*, released at press time, not only adds a RAM-resident module for sending and receiving mail but expands or refines a number of features. According to the vendor, version 3.0 allows more and larger mailing lists, more bulletin boards, global tagging of messages, blind carbon copies, extra formatting features in the text editor, and gateways to Telex, EasyLink, and Tele-mail on-line systems.

The Network Courier

Easy to learn and use, *The Network Courier* offers a good mix of message management, security, and connectivity features. Although the program doesn't top *cc:Mail*, the company's pricing scheme makes *The Network Courier* a better value for LANs with more than 25 users and for those who need connectivity options.

The program's numerous RAM-resident options should satisfy just about everyone. You can choose from the full-fledged standalone program, a 60K RAM-resident messaging version, and two small utilities (one resident and one not) that signal you when new mail arrives. An added plus: You can remove the programs from memory without rebooting the computer.

The Network Courier's 1-2-3-style command line will make most users feel right at home; other options, message lists, and so on are typically relegated to pop-up windows. *The Network Courier* largely matches *cc:Mail*'s messaging features and adds some notable extras. For example, you can forward messages, have a message returned if it's not received, assign priorities (so that an urgent message is transmitted ahead of others), and dictate when messages are to be transmitted. Network administrators also have a fair

EXECUTIVE SUMMARY

The Network Courier

LAN E-mail package

With its solid lineup of messaging and security features, *The Network Courier* runs a close second to *cc:Mail*. Its reasonable price makes it a better deal for large networks with links to the outside world.

	POOR	FAIR	GOOD	EXCELLENT
Interface				●
Messaging				●
Message management				●
Text editing		●		
Connectivity				●
Overall value				●

amount of control and can restrict read/write privileges, use of priorities, and gateway access. However, *The Network Courier* lacks a network bulletin board and doesn't permit user-defined mailing lists.

The Network Courier can attach any kind of file to a message, but messages themselves can incorporate only ASCII data cut from static files. Adding ASCII data is straightforward: Select a few menu options to display the file, highlight the data you want, and it's pulled into the message. If you want to import data from a 1-2-3 worksheet, though, you must exit *The Network Courier*, load 1-2-3, load the worksheet, create a .PRN file, exit 1-2-3, reload or reinvoke *Courier*, display the .PRN file, and then cut and paste data from that. It's a laborious process few users will subject themselves to.

Message management options are on a par with *cc:Mail*'s. You can sort messages by sender, subject, date, and priority. You can also tag messages and manipulate them at the same time.

The Network Courier shines when it comes to connectivity, and the options are often cheaper than *cc:Mail*'s. If you buy the \$995, 150-user internetwork version, for example, you receive gateway software for accessing other LANs running *The Network Courier*. (*cc:Mail*, Inc., charges \$1295 for the equivalent function.) Remote PCs can access the LAN with *Modem Mail Remote User* for

only \$95 per PC, but you'll need to install the \$495 *Modem Mail Post Office* on the server. The company even offers a 150-user internet-work *Windows* version of the program, and a mixed *Windows*-based and character-based *Network Courier* setup. In short, if you've got a large network—or numerous connections with the outside computing world—*The Network Courier* is a superior choice.

InBox/PC

Although Symantec stresses *InBox/PC*'s simplicity, it's not much easier to use than its more advanced rivals. At \$99 for a three-user system and \$599 for a 100-node setup, *InBox/PC* is a great deal for tiny and huge LANs. But work groups caught in between—say, a typical departmental LAN of 10 to 20 nodes—are penalized economically. However, *InBox/PC*'s poor file management features, lack of connectivity options, and absent on-line help probably won't attract many users anyway.

InBox/PC is based on a Macintosh version, but something got lost in the translation. Instead of a logical pulldown menu interface, you get a function key menu and a hodgepodge of <Alt>-key combinations. Inactive windows are not always cleared from the screen, making it difficult to figure out

Originally designed for the Macintosh, the character-based *InBox/PC* uses tiny icons to differentiate file types.

EXECUTIVE SUMMARY

InBox/PC

LAN E-mail package

Inexpensive and strong on essentials, *InBox/PC* lacks external links and falls short on file management. Its pricing scheme limits it to very small and very large LANs only.

	POOR	FAIR	GOOD	EXCELLENT
Interface			●	
Messaging				●
Message management	●			
Text editing	●			
Connectivity	●			
Overall value			●	

The Windows-based Da Vinci eMail uses icons to help you keep track of its profusion of windows.

what to do next, and the lack of on-line help further complicates matters.

In matters of messaging and file management, *InBox/PC* is a mixed bag. You get automatic file encryption, a LAN-wide bulletin board, an option that greets users with "news flashes" when they log on, customizable phone-message and memo forms, and an easy Rolodex approach to viewing messages. But crucial basics are lacking: Messages are limited to a single attachment, and you can't send carbon copies or sort messages by date or sender labels.

InBox/PC may be a bargain in certain situations, but its somewhat confusing interface, total lack of connectivity options, and relative dearth of features rule it out for most LANs. The company claims that a new version will feature folders, more file management options, and gateways to other systems. Until then, save your money.

Da Vinci eMail

Da Vinci eMail was the first E-mail program designed for *Windows*. Not surprisingly, it's the easiest package to use—and the slowest. *Da Vinci eMail* crawls on XTs and 8-MHz 80286 machines; even on a 386 computer the text editor is noticeably slow. When you fac-

tor in the company's pricing scheme and the program's lack of connectivity features, it's hard to recommend *Da Vinci eMail* to anyone except committed *Windows* users.

Before you consider *Da Vinci eMail*, take a hard look at your wallet. A five-user setup costs \$445, a 20-user setup costs \$895, and there are no price breaks for larger LANs. *Da Vinci eMail* requires a PC equipped with 640K of RAM, nearly 2MB of disk space (mostly for *Windows*), a graphics display, and a copy of *Windows*. For acceptable performance, though, you'll really need a fast 80286 or 80386 computer, 2MB of RAM, and an EGA or VGA display at each node.

Cost and speed issues aside, *Da Vinci eMail* is a pleasure to use. The mouse-driven, icon-oriented *Windows* interface has been sculpted to emulate traditional mail handling. To post a letter, for example, you place its icon in an on-screen envelope and attach files with a paper-clip icon.

You can't insert graphics directly into a message, but you can drop any image generated by a *Windows* application into the *Windows* clipboard and mail the clipboard. (If you want a graphic created with a DOS application, you can only capture and send the entire screen.) The recipient can view the image without having to run the original application.

EXECUTIVE SUMMARY

Da Vinci eMail

LAN E-mail package

A Microsoft *Windows* product, *Da Vinci eMail* has excellent features, but they are overshadowed by its high price, sluggish speed, and lack of connectivity options.

	POOR	FAIR	GOOD	EXCELLENT
Interface				●
Messaging			●	
Message management				●
Text editing		●		
Connectivity		●		
Overall value			●	

Da Vinci eMail's messaging and file management options are tops. You can assign three different priority ratings to messages and even encrypt messages with passwords. Pop up a dialog box, and you can sort and filter messages by sender and subject (or portions of either), priority, date, date range, carbon copy, read or unread status, and whether a paper clip was attached.

Though *Da Vinci eMail* is not recommended for LANs that haven't switched to *Windows*, keep your eyes open for a faster, cheaper, character-based version due before the end of the year and the addition of inter-network and on-line gateway options.

The LAN E-Mail Lineup

Price issues aside, *cc:Mail* is the clear winner in this review. Yet in the real world of

tight budgets, the program's innovative extras (especially those found in version 3.0) may not be enough to keep you from choosing the very capable and cheaper *Network Courier*. If your network has 25 users or fewer, go with *cc:Mail*; if your network has numerous nodes and linking up with other systems is key, *The Network Courier* has the edge. If you're not ready to buy, wait out the market—all of the reviewed vendors have bigger and better (and even cheaper) updates coming. ●

In Search of Forgotten Text

When your hard disk is overrun with files, finding data can be tough.

Here are five software sleuths to help you track down lost text.

Hard disks, like closets, weren't built with disorganized people in mind. Crucial information gets hidden easily under obscure file names or in forgotten subdirectories. Fortunately for those of us who lack photographic recall, there's a quick way to locate lost data. Using text retrieval programs you can search an entire hard disk for information and then edit or print retrieved material. *PC World* evaluates five of these text fetchers: *ZyIndex*, *SearchExpress*, *Memory Lane*, *Gofer*, and *The Text Collector*.

Text retrieval programs fall into two categories—those that index and those that don't. Indexing programs like *ZyIndex*, *Memory Lane*, and *SearchExpress* create a list of all the unique words in a text file and chart a path to them, much like data base management software. Building an index takes time and eats up disk space, but once the index is built, finding data is a breeze. In contrast, nonindexing programs such as *Gofer* and *The Text Collector* search sequentially through a file until they find the target word or phrase. This makes them better suited for searching smaller amounts of text.

Here are some other factors to keep in mind when matching text retrieval software to your particular needs: Does the program require document conversion, or can it read documents in their native file formats? Is the

program a TSR or a stand-alone? How much memory and disk space does the program devour? Finally, how competent is the software's cut-and-paste feature?

ZyIndex Professional 3.0

ZyIndex Professional is a powerful text retrieval program with an interface honed to essentials. The \$295 program requires indexing, so you wouldn't want to use it to track drafts that frequently change while you scurry to meet a tight deadline. Big, static text archives are the program's forte.

ZyIndex uses separate programs for indexing and searching. In practice this isn't as inconvenient as it sounds. Building an index is straightforward: You enter a target subdirectory, identify the file format, and mark the files to be indexed. Each index occupies about 20 percent of the space of the original file.

ZyIndex indexes files stored in a variety of formats including *1-2-3*, *dBASE*, and *WordStar*. But to create multiflavored indexes you must index each file format separately.

Once your oldies but goodies are indexed, *ZyIndex* makes searching a breeze. Like all the programs reviewed, *ZyIndex* searches can include Boolean OR, AND, and NOT operators. Searches can contain wild cards, and you can use DOS file-creation dates and

**George
Beinhorn**

file names in your requests. To locate a lost file, simply type the file name instead of entering a text string. *ZyIndex* can also search several indexes at once.

Once you've made your search, displaying the results is similarly painless—one key-stroke displays a neatly formatted list of retrieved files. Make a selection and *ZyIndex* displays the first 16 lines of text. You can move forward or backward and jump directly to the next and previous hits. To cut and paste a block to your application, simply mark it and save it to an ASCII file. *ZyIndex* can include the name and date of the source file in a saved block, along with the search request and a memo of up to 60 characters.

The indexing program's speed is barely adequate: It took more than 9 minutes to index a 32K file on a 4.77-MHz PC with a hard disk. Once the index is set up, search speed is a little more impressive; *ZyIndex* took only 10 seconds to set up the search and find the first hit.

ZyIndex Professional is a nice blend of search power and ease of use. For added search flexibility, *ZyFeatures*, a \$95 add-on, enables you to attach fields such as date and time to indexed files and create search macros. *ZyIndex*'s excellent design and modest disk space requirements make it the quintessential text-archiving program for seldom-changing file collections.

Memory Lane 2.0

Although *Memory Lane* also requires indexing, the \$99 program goes *ZyIndex* one better. Once you've indexed files, *Memory Lane* sits in RAM like a traffic cop, tracking file changes and noting them in its to-do list. Whenever it's convenient, you can choose files from the list for indexing. Alternatively, *Memory Lane* automatically indexes all new or changed files in the background when it sees the DOS prompt. The only hint of *Memory Lane*'s presence in RAM is an almost imperceptible slowing of disk saves.

SearchExpress offers extensive search options, but you need to convert your files into the program's proprietary format.

Memory Lane is fast: It indexed a 32K file in 43 seconds. The program is also extremely economical in its use of disk space. When 1MB or more of data is indexed, the index file is just 15 percent of the size of the source files. Installing the program to use up to 30 percent overhead yields faster searches.

Memory Lane's search features are easy and versatile. You can search unindexed as well as indexed files. *Memory Lane* also lets you restrict searches to files created under a single program (such as *Microsoft Word*) and organize indexed files according to subject categories you define.

The program lets you scroll through the retrieved text and jump to the next and pre-

vious hits. Cutting and pasting is easy: You simply mark a block with the arrow keys, return to your application, and press <Alt>-P to insert the text. Remarkably, *Memory Lane* detects the file formats of both the cut block and the underlying document and automatically performs required data translations. This conversion feature supports over 20 popular word processor, data base management, and spreadsheet programs.

With its excellent speed, RAM residency, frugal use of disk space, flexible search capabilities, and reasonable price tag, *Memory Lane* offers the best balance of cost, power, and features of the programs reviewed.

SearchExpress 2.30

Apparently designed for librarians and other professional information jockeys, *SearchExpress's* investigatory powers outclass office-level retrievers such as *Memory Lane* and *Gofer*. You can, for example, attach user-defined fields to graphics files and index them for later retrieval. But power, in this case, has a price—\$349 and 450K RAM. Add huge disk-space overhead and poky indexing to the high price tag, and the *SearchExpress* audience may drop to a select few.

Unlike with the other programs reviewed, you must translate your documents into the program's format before *SearchExpress* can root through them. *SearchExpress* took over 11 tedious minutes to convert and index a 32K *WordPerfect* file. Disk overhead for indexes amounts to 50 to 70 percent of the space occupied by the original file, far more than is required by either *Memory Lane* or *ZyIndex*. And while indexing, *SearchExpress* requires temporary workspace 2 to 10 times the size of the input file; a 2MB file can consume up to 20MB.

The program's simple menu interface belies its extensive search facility. You can search on up to nine statements or just a single word. Once it completes a search, *SearchExpress* displays the number of files that satisfy each request. In single-word searches, you can rank the retrieved files according to the number of occurrences. *SearchExpress* can also analyze a group of files for frequently occurring words and then search for files whose text content is similar.

EXECUTIVE SUMMARY

ZyIndex Professional 3.0

ZyIndex's uncomplicated design and more-than-adequate search options make it a good choice for office text files that don't change frequently.

	POOR	FAIR	GOOD	EXCELLENT
Import/Export				●
Indexing			●	
Searching			●	
Retrieval			●	
Overall value			●	

Retrieved documents are displayed in a document summary screen, where they're available for browsing. You can view the full text of retrieved files with search terms highlighted, then look at paragraphs or sentences containing search terms. However, *SearchExpress* has no cut-and-paste feature. You must use your word processor to open the file, find the text, and move it.

SearchExpress has extensive search capabilities, but unless you really need that kind of power, the program's system requirements, slow indexing, and lack of a text-transfer capability will leave you yearning for something faster and simpler.

Gofer 1.0

Gofer couldn't be more aptly named. It's an easy-to-use \$79.95 program that snoozes in RAM until you whistle, then races down hard-disk burrows to chase after lost blocks of text.

When you press its hot key, *Gofer* displays two windows: one requesting the 'text to Go For', and a main menu with seven choices. At this point, you simply enter a search request—up to eight 20-character text strings—and the hunt begins. The program took 15 seconds to make its first hit in a 32K file.

EXECUTIVE SUMMARY

Memory Lane 2.0

¹ Per index list.

² Approximately; actual limit is 65,536 unique words per document.

³ Two passes required for NOT searches.

⁴ Requires separate program.

Gofer pops up in RAM for convenient searching; however, it searches only one directory at a time.

Gofer's search capabilities are limited compared to other programs'; for example, you can search only one directory and its subdirectories at a time. Once the program has scored a hit, you can send finds to disk, to a printer, or just have *Gofer* summarize the number of finds in each file. You can also browse files without searching—for instance, to peek at a spreadsheet from your word processor.

A file-compression utility squeezes files by as much as 50 percent and lets you search and export text from the compressed files. *Gofer* can search files from up to ten popular application programs, including 1-2-3, dBASE, Q&A, Word, WordPerfect, and any application that generates ASCII or EBCDIC files.

Gofer has the feel of *simpatico* software—a combination of thoughtful design, versatility, speed, and real-world usefulness. For monster file collections, indexing programs are faster. But for searching groups of files that occupy less than 1MB, *Gofer* is hard to beat.

The Text Collector 1.5

The Text Collector is a \$69 stand-alone program that could give *Gofer* a run for the money in the nonindexing text retrieval race. In our tests it took only 10 seconds to make its first hit in a 32K file. But the program

hides its speed and extensive features behind a perplexing interface.

The Text Collector's opening menu is deceptively compliant—screens pop up crisply, and a set of shortcut commands lets you speed through the menus. The menu prompts you for a search string, an input file, and an output file. But after that things get complicated; the menu's three choices lead to a labyrinth of options that'll send you scurrying for the manual.

The Text Collector lets you save and recall an amazing cornucopia of defaults including search criteria, names of files to search, and output parameters. It can sort output files, search files according to date, and limit searches to a range of dates. Unlike *Gofer*, *The Text Collector* also performs single searches across several drives and paths. It isn't easy, given *The Text Collector*'s unintuitive syntax and program structure, but it can be done.

Once you've uncovered data, however, the program's cut-and-paste feature is burdensome at best. *The Text Collector* writes its finds either to an output file in a *context block* (a word, sentence, or paragraph surrounding each find) or to a block you define with special delimiters. To write an amorphous, nondelimited chunk of text to an output file, you must locate the text, enter the browse mode, tell the program to format the file in context blocks (paragraphs, for example), and finally write the blocks you want to the output file.

EXECUTIVE SUMMARY

SearchExpress 2.30

Designed for super flexible retrievals from large, static file collections, SearchExpress' s conceptual advantages rapidly lose their appeal the first time you use its s-l-a-w indexing routine. The absence of a cut-and-paste feature is a glaring oversight.

	POOR	FAIR	GOOD	EXCELLENT
Import/Export			●	
Indexing		●		
Searching				●
Retrieval			●	
Overall value			●	

The Text Collector forces you to learn its ways. The reward for your struggle is fast, flexible searching—but only if you've got the patience.

Remembrance of Text Past

Choosing the right text retrieval software depends on the shape of your pool of words and how often you need to fish through it. *ZyIndex* offers acceptable speed and is especially adept at plucking text from static files. *Memory Lane*'s auto-indexing and RAM residence are unsurpassed for searching through constantly changing files. *Search-*

EXECUTIVE SUMMARY

Gofer 1.0

Gofer is the choice for fast, fuss-free, nonindexed TSR scanning of subdirectories and floppies for the occasional mislaid file. For large text collections, however, an indexing program is faster.

Project Management— For Professionals Only

**Project management software
can help you plan, schedule,
track, and report on an army of
resources.**

**But it's not a casual management
tool.**

When project management software first came out, it was touted as the latest and greatest general problem-solving tool. But this category of software continues to appeal mostly to project management professionals. A product that's intuitive enough to hook a more general audience has yet to be developed—with the possible exception of *Insta-Plan* (see *The Software Shelf*, PCW, April 1988).

Still, the serious project manager can select from an excellent assortment of mid-range tools. Unlike high-end vertical packages such as *Primavera*, these programs are relatively inexpensive and are geared toward professionals with generic project-management needs. In this review, *PC World* evaluates four of the most popular project managers that cost less than \$700—*SuperProject Expert 1.1*, *Time Line 3.0*, *Harvard Total Project Manager II 2.0*, and *Microsoft Project 4.0*—as well as *Micro Planner 6*, a popular Macintosh product now available under *Windows*.

The Purchase Decision

Most of these products offer the four staple features of project management: the Gantt chart, the PERT chart, the critical path method (CPM) diagram, and the work break-

down structure (WBS) flowchart. Two of the programs, *SuperProject Expert* and *Time Line*, conveniently allow text entry and editing in a hierarchical outline. *Micro Planner*, in keeping with the Macintosh model, takes a unique graphic approach to project planning.

In addition to carefully considering a program's interface, buyers should appraise its capacity—the number of tasks it supports. *SuperProject Expert* is the clear winner in this category, allowing up to 2800 tasks in expanded memory.

Another key feature is resource management. Programs should be able to allocate a resource by the hour or by the minute and then schedule it flexibly over the lifetime of a given task. All the products reviewed have this ability, to various degrees. The programs also allow you to compare a baseline plan with actual resource use and costs.

Finally, superior reporting is critical for tracking a project's progress. All the programs offer standard report formats as well as custom-design capabilities. They all work with laser printers and plotters, but their support for color printers and sideways printing is spotty.

**Woody
Liswood**

SuperProject Expert 1.1

For \$695, you can have the most complete and complex package reviewed—*SuperProject Expert*. As an example of its flexibility, you can build a project from an outline, PERT chart, Gantt chart, or WBS, and switch between these views with a couple of keystrokes.

The program has a unique method of developing a PERT chart. When you create a task, the PERT box appears on screen. You then define the links between that task and all others and, using the cursor keys, position the box within the PERT network as you see fit. You can even forecast the probability that the task will be completed on schedule and then generate a report showing best-case, worst-case, and on-schedule scenarios.

SuperProject Expert provides a host of advanced scheduling features, such as the ability to split a variable resource assignment between two simultaneous tasks. The package supports resource leveling among linked sub-

projects; alternatively, you have the option of specifying that certain projects not be leveled.

You can have over 100 reporting fields, including task name, cost, duration, and rates. Version 1.1 adds the Cost/Schedule Statistics Report required of government contractors. The program prints reports sideways, but you must print first to disk and then use *Sideways* from the DOS prompt.

SuperProject Expert has three menu levels, from novice to expert, and a macro language complex enough to let you develop tutorials or automate visual displays. The program supports expanded memory and works on a LAN. An OS/2 version is available for \$795. *SuperProject Expert's* complex options may at first seem daunting, but if you need power and capacity it's the program of choice.

FEATURES EVALUATION

EXECUTIVE SUMMARY

SuperProject Expert 1.1

Project management software

This feature-rich product supports up to 2800 tasks in expanded memory and provides great flexibility for as-signing and tracking resources.

	POOR	FAIR	GOOD	EXCELLENT
Project analysis				●
Data entry and editing				●
Reporting				●
Overall value				●

Time Line 3.0

Time Line's forte is its easy-to-use interface. In addition, the \$595 program sports full outline control, a note-taking feature, macros, and handy data entry and what-if features such as an undo/redon command.

After you enter tasks, *Time Line's* convenient forms-oriented system prompts you to fill in data about the project, each task, and each resource. Although you can't work in a WBS as you can in *SuperProject Expert* and *Harvard*, you can enter a WBS code when you create tasks and then filter the tasks using that code.

Time Line will maintain up to 300 resource or cost categories. Resource leveling can be accomplished for all tasks in memory at the same time. However, if you wish to level subprojects, they must all fit within *Time Line's* 1000-task limit (1600 tasks in expanded memory).

Time Line's default calendar contains the standard federal government holidays. But the program doesn't allow you to create a separate calendar for each resource, which can present problems for long-term projects and vacation scheduling. There's a kludgy work-around, but flexible calendars really should be integral.

The program contains five standard report formats that can be customized extensively. *Time Line Graphics*, a separate \$195 module, provides plotter support and allows you to

print bit-mapped graphics and time-scaled PERT charts. A LAN version of *Time Line* is available for \$595 plus \$195 for each additional node.

For years *Time Line* and *SuperProject Expert* have been playing leapfrog for leadership in this software category. At the moment, *SuperProject Expert* has a slight edge in terms of capacity, while *Time Line*'s somewhat more intuitive interface is its strong point. Both programs are an excellent value and are capable enough to appeal to the professional project planner.

Micro Planner 6

The \$595 *Micro Planner* was originally a Macintosh program but now runs under either *Windows 2.0* or *Windows/386*. If you're used to traditional project management on a PC, *Micro Planner* will come as a surprise. It uses a graphic, PERT-type interface for project design. To insert a task into a chain of events, for example, you click the mouse on an event "circle" and then stretch a line forward or backward, depending on whether the activity precedes or follows that event.

Modifying a *Micro Planner* chart can be a pain. In one plan, I wound up with an unconnected node that would not delete. When I tried to analyze the plan, the program told me the node wasn't connected and wouldn't let me continue—a real catch-22. Also, you can't move a block of related activities from place to place. *Project Exchange*, a \$100 add-

on that was under development at press time, is supposed to add this capability (and others).

Micro Planner handles up to 1340 activities and a maximum of 26 resources per project. But sometimes its procedures are unusual. For example, *Micro Planner* uses a special activity type known as a *hammock* to summarize tasks. This acts something like a subproject but is more limited; unlike with the other programs, you can't store subprojects separately on disk. Strictly speaking, *Micro Planner* is not a multiuser application; although it will run on a LAN, at press time all multiuser features were still under development.

Among project managers, *Micro Planner* is a middleweight. On the positive side, it offers numerous activity types, its *Windows* interface makes for excellent graphics and printer support, and its files work with the Macintosh version. But *Micro Planner* lacks *SuperProject Expert*'s capacity and flexibility, and the interface is a challenge if you're used to more traditional approaches.

Harvard Total Project Manager II 2.0

Harvard Total Project Manager II version 2.0 is an easy-to-use \$595 package geared for midsize projects. Its *PFS*-style pulldown menus make using the program almost like working within the *Windows* environment.

Using Harvard's task list is like using a Gantt chart in other programs, except the Gantt isn't provided automatically. Tasks can be edited and filtered in this view.

EXECUTIVE SUMMARY

Time Line 3.0

Project management software

Along with an easy-to-use interface, *Time Line* provides excellent data entry tools and supports up to 1600 tasks in expanded memory. However, resource calendars aren't available.

EXECUTIVE SUMMARY

Micro Planner 6

Project management software

Micra Planner, a Windows product, takes a non-traditional approach to project management. Although its graphics and output are excellent, it makes the user adjust to its ways.

	POOR	FAIR	GOOD	EXCELLENT
Project analysis				●
Data entry and editing				●
Reporting				●
Overall value				●

A planner can work from PERT, Gantt, or WBS formats, but the default method is WBS. Working from a *Harvard* task list is like working from a Gantt chart in the other programs, except that on-screen Gantt graphics aren't automatically provided. Within *Harvard*'s actual Gantt chart you can edit and create tasks, but you can display only a few tasks at a time.

Only one calendar is available per project. However, you can enter resources and costs in just about any way that makes sense, and subprojects and resource leveling are both supported.

Project reporting is integrated, and *Harvard* provides 24 predesigned formats. If you want custom reports, you select the columns you wish in any order, then sort alphabetically, numerically, chronologically, or by special user-defined codes. Laser printers, plotters, and sideways printing are all supported. Like *Micro Planner*, *Harvard* can work on a LAN but doesn't provide any multiuser capabilities.

A new version of the program, renamed *Harvard Project Manager 3.0*, was announced at press time, too late to be included in this roundup. According to Software Publishing, the new version retails for \$695 and includes a WBS outline, unlimited resource calendars, data import, graphics scaling, automatic report templates, expanded memory support, and a simplified interface feature (see *Product Outlook* in this issue for more details).

Microsoft Project 4.0

The latest version of *Microsoft Project* offers all the necessities for competent project design, including resource leveling, filtering, custom reporting, and plotter support. The program runs on a LAN and includes an import/export facility for *Primavera* files.

Like the other programs, the \$495 *Microsoft Project* works from a task/Gantt view as well as from a PERT chart. As you add tasks, you can call up resource screens and enter costs. However, resource allocation is not as flexible as in *SuperProject Expert*—you can't assign a resource to work variable hours over a task's duration. Subproject support is adequate but somewhat rigid. You must create each subproject separately, save it to disk, then link it into the main project. Resource leveling is not supported within subprojects. If dates are changed in the master project after leveling, the planner must update all subprojects manually.

Microsoft Project's reporting module contains 18 standard reports and a new report writer that lets you custom-design reports and templates. A sideways-printing feature is also provided. For project planners who don't require support for thousands of tasks, extensive flexibility, or resource leveling within subprojects, *Microsoft Project* is a good, economical choice.

EXECUTIVE SUMMARY

Harvard Total Project Manager II 2.0

Project management software

Harvard is a fine midrange program that supports up to 350 tasks per project and provides very good graphics and reporting. An upgrade, close to release at press time, promises even better value.

	POOR	FAIR	GOOD	EXCELLENT
Project analysis				●
Data entry and editing				●
Reporting				●
Overall value				●

Satisfying a Planner's Needs

SuperProject Expert is complex, but it's a winner for large projects requiring super flexibility. *Time Line* follows close behind and sports a simpler interface. *Micro Planner* offers power under *Windows* but breaks tradition with its graphic interface and unusual terminology. *Harvard* and *Microsoft Project* are both capable programs at midrange, but they can't handle larger projects.

EXECUTIVE SUMMARY

Microsoft Project 4.0

Project management software

Microsoft Project 4.0 carries up to 750 tasks and sports a new report writer, plotter support, and resource leveling. What it lacks is extensive fine-tuning for resources.

	POOR	FAIR	GOOD	EXCELLENT
Project analysis				●
Data entry and editing			●	
Reporting			●

Multitasking Without OS/2

**Why wait for OS/2? Why
abandon your familiar DOS
applications?**

**Four operating environments
use the virtual 8086 mode of
Intel's 80386 microprocessor to
offer DOS multitasking today.**

Businesspeople often fantasize being able to do two (or more) things at the same time—especially around 3:15 on Friday afternoon. As it happens, the “virtual 8086” mode built into Intel's 80386 microprocessor provides that very ability. With the proper operating environment to serve as arbitrator, the chip allows multiple DOS sessions to proceed at once, each in its own memory partition—or virtual machine (VM). Each partition acts like a separate PC, with its own memory-resident programs, memory size (up to 640K), and AUTOEXEC.BAT file.

DOS users who don't want to wait for OS/2 applications to emerge from programmers' workrooms can take advantage of four multitasking 80386 environments right now: *Windows/386*, *Desqview*, *VM/386*, and *PC-MOS/386*. All four let your computer work in the background—recalculating a spreadsheet, or sending a file over the modem—while you write a report or add sales figures in the foreground.

PC World takes a hard look at each of these operating environments in terms of installation, performance, usability, and compatibility with DOS applications. In the final analysis, *Desqview* comes up the clear winner.

Certain similarities unite the systems. In addition to running multiple DOS sessions, all four prevent program conflicts and allow you to switch among programs. All access extended memory; the more RAM there is in your computer, the more VMs you can install. All but *Windows* allow you to adjust time slicing (the percentage of processor time allocated to foreground and background sessions), which enables you to maximize foreground performance.

On the downside, applications run more slowly under all four environments than they do under DOS. Multitasking always degrades performance; there's just no way to run two CPU-intensive tasks at the same time without slowing both of them down. But all these environments slow down applications (to varying degrees) even when there's nothing happening in the background.

To evaluate performance, I ran two informal tests on each environment. First, to find out how much each environment slowed performance in a best-case, single-tasking scenario, I conducted a test suite—running a DIR in a crowded subdirectory, copying four 250K files in DOS, and executing a lengthy search-and-replace in *WordStar 4.0*—all with no background activity. Then I ran the same suite as a multitasking test, with two CPU-intensive tasks (loops that counted from 1 to 1 million in compiled QuickBASIC 4.0) run-

**Michael
Goodwin**

ning in background windows. Default time slicing was used for all multitasking tests.

Usability is just as important as performance, and here the environments vary widely. For instance, the virtual 8086 mode lets only one VM access a given COM port at a time. Two of the environments swap the port automatically when you move from one VM to another, while two require you to make the exchange manually. Two insist that you generate a program information file (PIF) before you can run a DOS application for the first time, and two do not. Two support cut and paste between VMs, and two do not. Some environments offer crash isolation: If a program hangs up in one partition, you can simply do a warm boot to restart it while processing continues undisturbed in the other partitions; others do not provide this important feature.

Something else to consider. Your favorite applications may not run in some environments. Although it was not possible to perform an exhaustive compatibility test, I tried out *WordStar 4.0*, *Microsoft Word*, *Word For Word*, *Lotus Express*, *PC-Talk*, *ProComm Plus*, *SideKick*, *ProKey 4.0*, *QuickBASIC 4.0*, and a shareware key-repeat-rate utility called *Kbflx2*. A few problems surfaced in the course of this informal test.

Regardless of which 80386 environment you choose, multitasking takes some getting used to. A couple of these environments make the transition so difficult that it may not be worth the trouble, but the two that work well are not only efficient work boosters, they're big fun too.

Windows/386 2.1

Microsoft Windows and *Windows/386* are widely used operating environments. In fact, many popular applications (like Aldus's *Page-*

Maker and *Owl's Guide 2.0*) can be run on a PC only under *Windows*.

Like version 2.03 (see "Still Waiting For *Windows/386*," *PCW*, April 1988), *Windows/386 2.1* (\$195) sports a Macintosh-like user interface with pulldown menus and dialog boxes that clearly inspired OS/2's Presentation Manager. Also like OS/2, the system implements *virtual memory*: It automatically swaps program code from memory to disk when you run out of RAM. It swaps only *Windows* itself, or *Windows*-specific programs like *PageMaker*, however. New features include access to an additional 60K of conventional memory, a built-in control for key repeat rate, improved setup, and support for 74 additional printers and plotters.

Thanks to clear documentation and a menu-driven setup utility, the system is extremely easy to install. Applications written specifically to work with *Windows* can be run simply by clicking the mouse on them. However, before you run a non-*Windows*-specific application for the first time, you must create a PIF file to tell *Windows* how much memory the application requires, whether it writes directly to the screen,

EXECUTIVE SUMMARY

Windows/386 2.1

Operating environment

A seamless Mac-like interface, virtually indistinguishable from OS/2's Presentation Manager, makes this popular environment very easy to use, and it includes a package of handy software. But slow performance and awkward serial-port switching intrude unnecessary frustration.

	POOR	FAIR	GOOD	EXCELLENT
Application management				●
Installation and configuration			●	
Memory management				●
Overall value			●	

whether it will run in the background, whether it will allow *other* programs to run in the background, and so on. While the built-in PIF editor simplifies the process of filling in the blanks, figuring out what to put in the blanks is no trivial process. In many cases, only trial and error will reveal how much memory a given application needs; until you get it right, you'll face a barrage of error messages and program crashes.

Applications start from *Windows*' master control program, MS-DOS Executive. Each program runs in its own window, or partition, which can be as large as 640K. *Windows* can be resized and moved around the screen easily with the mouse. It was only possible to install three 640K partitions on a 4MB Compaq Deskpro/386 before *Windows* began swapping code to disk; this was the smallest number of VMs in the roundup.

Usability is uneven. Switching between partitions can be tricky at first, but once you learn the ropes it's relatively easy to step through program partitions by pressing <Alt>-<Tab> or <Alt>-<Esc>. *Windows/386* lets you cut and paste text and graphics from one partition to another with a well-designed clipboard function. True crash isolation is not provided; however, if a program crashes in one partition, a "terminate" option usually permits you to extricate yourself and save the files in the other VMs before restarting the system.

Swapping the serial port is tedious. Once the port is assigned, if you try to use it in another VM, a dialog box appears and demands to know which partition should get the port; unassigning it can be cumbersome. There were no compatibility problems.

Windows/386 delivers only mixed performance. Even with no disk swapping to slow execution, single-tasking was still next-to-worst in the roundup. However, in multitasking mode *Windows/386* came in second.

Windows/386's wide popularity is well deserved, thanks to its first-class user interface, well-implemented cut-and-paste function, extensive compatibility, and a software package that includes a bare-bones word processor, a competent paint program, and a gang of handy utilities. But for everyday business users, its tedious COM-port switching and relatively slow single-tasking are serious drawbacks.

Desqview 2.01

Quarterdeck's *Desqview* is a polished multitasking operating environment with an outstanding user interface; when run with the company's QEMM-386 memory manager, it's a seamless 386 multitasker. *Desqview* delivered the fastest performance, in both events, of any environment in the roundup. Like *Windows/386* and OS/2, it offers virtual memory—and even betters *Windows*, which swaps only *Windows*-specific applications, by swapping all programs.

A menu-driven utility makes installation of *Desqview* (\$190, including QEMM-386) a snap. However, before you can run DOS programs, *Desqview* requires you to create a PIF file for each one, a process that's even more complicated here than it is with *Windows*. Excellent documentation helps, but not enough. Once applications are installed, their names appear on a *Desqview* start-up menu.

The largest partition allowed was 525K, and I managed to fit six of these partitions in the 4MB Compaq—the highest number in the roundup.

Desqview provides an extremely well-designed, easy-to-use interface. A tap on the

FEATURES EVALUATION

Multitasking 80386 Operating Systems

Desqview and Windows/386 lead the pack in application management. Desqview takes first place for installation and configuration, as well as for memory management.

¹ Terminate function allows you to exit crashed VM and save files in other VMs before restarting computer.

² Between Windows applications or from some standard applications into Windows applications.

³ Available as part of Desqview Companions, which costs \$100.

⁴ May not work reliably when used with early 80386 chips.

⁵ Swaps only Windows itself and Windows-specific applications.

<Alt> key brings up the *Desqview* menu, from which you can start a new application in a new VM, switch VMs, close down a VM, and resize or move a window. You can choose menu options with a mouse (by pointing and clicking) or cursor keys. Experienced users will appreciate the ability to switch rapidly between windows simply by typing a number from the Switcher menu.

A number of other well-designed features give *Desqview* a high usability rating. The program provides complete crash isolation and switches the serial port automatically when you change partitions. Although *Desqview* is known for some compatibility problems, none of the software tested had any

Desqview's complex Change a Program menu helps create program information files to optimize application performance.

trouble running. It lets you cut and paste text (but not graphics) between partitions.

Desqview seems designed to save time, instead of eating it up with serial port conflicts and slow performance. It may take you a while to master its configuration routine, but its speed and easy-to-use interface will win you over.

VM/386 1.1

Intelligent Graphics' *VM/386* is simple to install and simpler to run. Best of all, it requires no PIF files. Unfortunately, it is also the slowest performer in the roundup in both tests, and (at \$245) the most expensive. Software conflicts and nonresizable, full-screen windows are additional shortcomings.

Easy-to-use installation software makes initial setup of *VM/386* a breeze. Once it's up and running, you use the Machine Control menu to install VMs as large as 640K in various combinations and sizes. Each VM can have its own CONFIG.SYS and AUTOEXEC.BAT; default versions of these files are provided if you don't want to customize them. Each VM comes up as an empty, full-screen window with a DOS command line, ready to run applications. Windows cannot be resized.

Once you've installed your VMs, you can save the setup; thereafter, when you boot *VM/386* it will start the VMs automatically.

This process does not always work flawlessly, however; on several occasions, when *VM/386* was trying to start several VMs at the same time, one or more failed and needed to be restarted.

The program itself gobbles a humongous 2MB of RAM, and due to a conflict with Compaq's memory management scheme, some of the RAM in the test PC was inaccessible. As a result, only four 640K VMs could be installed on a 4MB Compaq.

Usability is uneven. On the bright side, no PIF files are needed. Switching between VMs couldn't be easier: You can press <Alt>-<Sys Req> to bring up the Switcher menu, cursor down to the name of the desired machine, and press <Enter>; or simply press <Alt>-<Sys Req> *number* for a faster switch. *VM/386* provides complete crash isolation; you can reboot a virtual machine without restarting the entire system.

On the downside, no cut and paste is available. Reassigning the serial and parallel ports is a tedious process, requiring you to use the Hardware Control menu every time. More distressing, compatibility was spotty. *ProComm Plus* ran fine; *PC-Talk* wouldn't load at all; *Express* loaded, logged on to MCI, and uploaded messages nicely, but then it refused to download and trashed program and data files on the hard disk. (Intelligent

EXECUTIVE SUMMARY

Desqview 2.01

Operating environment

Excellent performance, a convenient user interface, virtual memory, full crash isolation, automatic serial-port switching, and reliable operation make this trouble-free multitasker

a clear winner. Cut and paste works for text but not graphics.

	POOR	FAIR	GOOD	EXCELLENT
Application management				●
Installation and configuration				●
Memory management			●	
Overall value				●

Graphics claims that VM-386's problems with *Express* have been solved in the forthcoming version 1.12.)

VM/386 costs a bit more than the other environments, but its ease of use is tempting, especially for users who don't have time to figure out PIF files for every DOS application. Documentation is decent, and the user interface is attractive. But VM-386's relative slowness is frustrating, and its destruction of *Express* disk files is disturbing to say the least. Wait until they fix the bugs before you buy.

PC-MOS/386 2.10

PC-MOS/386 from The Software Link is the odd-environment-out in this roundup; unlike the other three, which work with DOS, PC-MOS/386 replaces it completely. It's designed as a multiuser operating environment, but it works as a single-user multitasking system as well. Once you get it running it performs decently enough, but installation and configuration are difficult, and it won't run some popular applications like *ProKey* and *SuperKey*.

PC-MOS/386 (\$195) comes with a hard disk installation utility that leaves a number of critical tasks for the user. Most people will

EXECUTIVE SUMMARY

VM/386 1.1

Operating environment

Easy to install and operate, this environment boasts an attractive, menu-driven interface and allows you to run DOS applications without tedious PIF files. Unfortunately, it's a slow performer, requires manual serial port reassignment, and destroys Lotus *Express* disk files.

	POOR	FAIR	GOOD	EXCELLENT
Application management			●	
Installation and configuration				●
Memory management				●
Overall value			●	

find it tough to get started. Many important features, like the print spooler and the disk cache, won't work until you specify memory addresses and segment sizes—and the documentation is technical and hard to understand. I could not get the operating system up without hand-holding from tech support—and I decided to leave some handy features (like that print spooler) uninstalled. One nice touch: No PIF files are needed.

The process of installing VMs is a bit clunky, but you can automate the entire procedure with an easily edited AUTOEXEC.BAT file. A system-level command, .ADD-TASK, creates VMs and assigns memory to them. Each partition can have its own AUTOEXEC.BAT file, but not a CONFIG.SYS file. The largest VM I was able to install on my 4MB Compaq was 580K, but five such VMs went in without any out-of-memory messages. VMs come up as full-screen (non-resizable) windows, and you run programs from a command line prompt, as in DOS.

PC-MOS's usability is unimpressive. While switching between partitions is easy (all you do is press <Alt>-number), you cannot cut and paste between partitions; nor is crash isolation provided. PC-MOS handles serial port arbitration automatically, but it is far from trouble free. An XMODEM transmission under *ProComm* ran fine in the background, but when another application tried to access the serial port, *ProComm*'s XMODEM routine crashed and could not recover.

VM/386's Device Allocation menu is used to swap access to COM and LPT ports from one virtual machine to another.

A review of PC-MOS version 1.01 (see *The Software Shelf*, PCW, December 1987) complained about limited compatibility with DOS applications. The Software Link claims that version 2.10 will run most popular applications, including *dBASE III Plus*, *1-2-3*, and *R:base*. However, macro processors like *ProKey* and *SuperKey* still won't run, *SideKick* requires special patching, and *Express* refused to load at all.

Performance was mixed. In single-tasking mode, PC-MOS/386 had the second-fastest score in the roundup; however, in multitasking mode it came in next to last.

PC-MOS/386 is an interesting environment, but it seems best suited for people who aren't daunted by having to manipulate memory segments. Its inability to run applications like *ProKey* and *Express* and its hazardous COM port arbitration support make it a poor choice for business users.

80386 System Winners

There is no question which environment is the most useful for today's business user. *Desqview*, which has been around long enough to have worked all the bugs out of its system, is fast, powerful, easy to use, and trouble free. *Windows/386* is deservedly popular and features a highly polished user interface, but it's a bit slow, and swapping the serial port from partition to partition grows tedious. *VM/386* runs DOS applications without PIF files, and it will be a serious

EXECUTIVE SUMMARY

PC-MOS/386 2.10

Operating environment

Seemingly designed more for the technically oriented user than the business user, this command-line-driven environment is highly flexible and can be started from an easily edited batch file. But it's difficult to install and won't run some popular applications.

	POOR	FAIR	GOOD	EXCELLENT
Application management			●	
Installation and configuration			●	
Memory management			●	
Overall value			●	

contender once it speeds up, simplifies its serial port switching, and solves its compatibility problems. PC-MOS/386 is simply too difficult to install and use.

If you're tired of waiting for OS/2 and want to start increasing your productivity today, there's no reason to delay any longer. You *can* do two things at the same time—even more—as long as you choose the right operating environment. ●

Michael Goodwin is an associate editor for PC World.

FOR
GROWING
BUSINESSES
EVERYWHERE

DAC EASY™ MAKES A WORLD OF DIFFERENCE!

DacEasy™ Accounting.

More Than 400,000 Growing Businesses Worldwide. DacEasy Accounting leads the industry as the number one selling, award-winning program. Two-time winner of *PC World's* World Class Award and *PC Magazine's* Editor's Choice, DacEasy Accounting recently was named *InfoWorld's* Product of the Year. Again and again, DacEasy proves that it makes a difference.

In fact, it provides you with more than 700 reports and "what if" forecasting scenarios based on three-year historical information — great for projecting expenditures and revenue. And, in addition to the program, you'll find the 460-page documentation is written for ease of understanding with helpful hints, screens and examples.

The only accounting software to win all four readers' contests in the past three years!

The DacEasy™ 3.0 Series. A World of Difference in Business Software.

Naturally, out of the best-selling accounting program grew the need for related business programs such as DacEasy Payroll. The 3.0 version also features a new intuitive design, pull-down menus, flexible pay periods, current federal and state tax tables, automatic withholdings, printing of checks, W-2's and 1099 forms, and much more. It's no wonder DacEasy is the world's best-selling payroll and personnel management program!

Also new for 1988 is DacEasy Graph+Mate, a RAM-resident program that interfaces with DacEasy Accounting or Payroll. Its easy graphic reporting features pie charts, line charts, bar charts, stacked-bar charts and perspective bar charts. Plus custom file viewing, macros, pop-up calculator and notepad, and more make it the ideal companion.

DacEasy™. The World's Best Ongoing Customer Support and Training!

Disk-based tutorials, FREE Getting Started Support, and a brand new video tutor are just a few of the many products and services Dac offers. Accounting and Payroll Tutors serve as on-screen supplements guiding you through installation to complete set-up with colorful graphics, sounds, primers and examples. And now, you can enjoy at your convenience, DacEasy Accounting Video Tutor, a two-hour VHS tape for a fun way to learn Accounting 3.0. Toll-free Extended Support plans and nationwide DacEasy seminars are also available.

A World of Difference in Price!

DacEasy offers the growing business a world of products excelling in performance and price! Priced at \$99.95 each are DacEasy Accounting (all seven modules), DacEasy Payroll and DacEasy Graph+Mate. And for a significant savings is the DacEasy BonusPack which includes DacEasy Accounting, Accounting Tutor, DacEasy Payroll and Payroll Tutor, for only \$199.95. A great start to computerizing your growing business the DacEasy way.

To order DacEasy™ Accounting, Payroll and Graph+Mate by mail send \$99.95 (each), BonusPack \$199.95 to Dac Software (address below). (Plus \$7.50 Shipping/Tx residents add sales tax/\$17.50 shipping outside U.S.)

The Dell System 220. Once again the critics stole the words right out of our mouth.

"The Dell System 220 runs most PC Labs system benchmark tests at speeds that would make you think you're running a 386."

—JOHN DICKINSON, PC MAGAZINE

"...the Dell machine is renewed evidence that the price of 286-based desktop equipment continues to drop rapidly, making such machines very attractive for daily work under MS-DOS even as they hold out the promise of running OS/2 in the future."

—WILL FASTIE, PC WEEK

"...includes a year's on-site support...in the price of the computer. This is the sweetest support deal offered by any computer vendor in the industry."

—ERIC KNORR, PC WORLD

"The hot item from a technical point of view is the System 220. This machine runs a 286 processor at 20 MHz, which is its major claim to fame."

—WILL FASTIE, PC WEEK

"...the System 220 has more going for it than just speed."

—PC WORLD

The reviews are beginning to pour in.

And they read like a wish list for every power user looking to exceed the ordinary limitations of a 286 computer.

The computer everyone is praising in such glowing terms is the Dell System 220.

The first 286 computer with a clock speed of 20 MHz.

It's totally compatible with MS-DOS® and MS® OS/2 and is faster than many 386 computers. Yet it sells for much less.

Because you buy it direct from us.

Eliminating the mark-ups and margins of computer stores.

We design and build every Dell computer right here in Austin, Texas.

We put each and every one through a comprehensive burn-in and a battery of diagnostic tests before we ship it.

And after we ship, we give you the best technical support you'll find anywhere in the computer industry.

Our technicians are on the phone from 7AM to 7PM every business day.

Almost any question you may have about a Dell system can be answered over the phone.

And, in the rare case, that your question can't be answered by an on-line technician, we'll send a Honeywell Bull technician by the next business day.

A full year of on-site Honeywell Bull service is included within the purchase price of your Dell system.

Your Dell computer also comes with a thirty-day money back guarantee.

And we back every one of our computers with a one year limited warranty on materials or workmanship.

For more information about Dell computers, read the reviews in the trade press, turn the page, review our product offerings, and call us at (800) 426-5150.

You'll like what we have to say.

TO ORDER, CALL
800-426-5150
IN CANADA CALL 800-387-5752

The Dell Computer Store.

Welcome to our store.

We believe you'll find this an extremely pleasant shopping experience.

Our sales staff is on hand to serve you from 7AM to 7PM (CST) from Monday thru Friday.

Just call (800) 426-5150 and we'll give you the technical assistance and information you need to make sure you're buying the system that's right for your needs.

Then you have the option of either a direct purchase or your company can take advantage of our Leasing Plan.

Once you've made your choice, our Total Satisfaction Guarantee gives you thirty days from the day you receive your system, to decide if you are absolutely, totally satisfied with the product.

If you're not, simply return the system and you'll receive a full refund. No questions asked.

Your Dell computer is supported by a team of technical experts that can be reached every business day, from 7AM to 7PM (CST), simply by calling (800) 624-9896.

In most cases, any question you may have about your Dell system can be answered by one of our technicians on the telephone.

Our technicians are also supported by Honeywell Bull service engineers who can be sent to your office by the next business day, should on-site service be required.

This optional service contract is available in over 95% of the United States, with over 1,000 engineers in 198 service locations.

We also offer a One Year Limited Warranty, which warrants each system we manufacture to be free of defects in materials and workmanship for one full year.

Feel free to call or write for the complete terms of our Honeywell Bull Service Contract, Guarantee and Warranty. Dell Computer Corporation, 9505 Arboretum Blvd., Austin, Texas 78759-7299.

THE NEW 20 MHz 386[†] SYSTEM 310.

The top of the line. It's our highest performance computer available, faster than the IBM[†] PS/2[†] Model 80 and the Compaq[†] 386/20. It runs at 20 MHz with the latest 32-bit architecture. Since it also has Intel's Advanced 82385 Cache Memory Controller, and high performance disk drives, the System 310 is ideal for intensive database management, complex spreadsheet development, CAD/CAM, desktop publishing or performance as a network file server.

Standard Features:

- Intel[†] 80386 microprocessor running at 20 MHz.
- 1 MB of RAM (640K usable) expandable to 16 MB without using an expansion slot.
- Advanced Intel 82385 Memory Controller with 32 KB of high speed static RAM.
- Socket for 20 MHz 80387 or Weitek coprocessor.
- 5.25" 1.2 MB or 3.5" 144 MB diskette drive.
- Dual diskette and hard disk drive controller.
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports.
- 200-watt power supply.
- 8 expansion slots (6 available).

Performance Enhancements (Systems 310 and 220):

- 384 KB of dedicated RAM is used by portions of the system software for increased performance.

***Lease for as low as \$148/Month.*

System 310	With Monitor & Adapter	
Hard Disk Drives	VGA Mono	VGA Color Plus
40 MB - 28 ms	\$4,099	\$4,399
90 MB - 18 ms ESDI	\$4,899	\$5,199
150 MB - 18 ms ESDI	\$5,399	\$5,699
322 MB - 18 ms ESDI	\$7,399	\$7,699

THE NEW 20 MHz 286 SYSTEM 220.

As fast as most 386 computers, at less than half the price—more power for the money than any other system. An 80286 system that runs at 20 MHz, with less than one wait state. Completely compatible for both MS-DOS[®] and MS[®] OS/2 applications (it runs faster than IBM PS/2 Model 80), and with a remarkably small footprint, the System 220 is the ideal executive workstation.

Standard Features:

- 80286 microprocessor running at 20 MHz.
- 1 MB of RAM (640K usable) expandable to 16 MB (8 MB* on system board).
- Page mode interleaved memory.
- Integrated diskette and VGA video controller on system board.
- One 3.5" 144 MB diskette drive.
- Integrated high performance hard disk interface on system board.
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports.
- LIM 4.0 support for memory over 1 MB.
- Three full-sized AT[†] compatible expansion slots available.
- Socket for 80287 coprocessor.

Options:

- External 5.25" 1.2 MB diskette drive.
- 3.5" 144 MB diskette drive.
- Intel 80287 coprocessor.
- 1 MB RAM upgrade kit.

***Lease for as low as \$85/Month.*

System 220	With Monitor		
	VGA Mono	VGA Color	VGA Color Plus
One Diskette Drive	\$2,299	\$2,499	\$2,599
40 MB - 29 ms Hard Disk	\$2,999	\$3,199	\$3,299
100 MB - 29 ms Hard Disk	\$3,799	\$3,999	\$4,099

THE 12.5 MHz SYSTEM 200.

A great value in a full-featured AT compatible. An 80286 computer running at 12.5 MHz, this computer is completely MS-DOS and MS OS/2 compatible. The System 200 offers high speed drive options, industry standard compatible BIOS and on-site service. As Executive Computing said of this computer's predecessor, "If faster processing speed and low cost are two key issues affecting your purchase decision, this machine might be the ideal choice for your office."

Standard Features:

- Intel 80286 microprocessor running at 12.5 MHz.
- 640 KB of RAM expandable to 16 MB (4.6 MB* on system board).
- 5.25" 1.2 MB or 3.5" 1.44 MB diskette drive.
- Dual diskette and hard disk drive controller.
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports.
- 200 watt power supply.
- Real-time clock.
- 6 expansion slots. (4 available with hard disk drive controller and video adaptor installed).
- Socket for 8 MHz 80287 coprocessor.

Options:

- 512 KB RAM upgrade kit.
- 8 MHz Intel 80287 coprocessor.

**Lease for as low as \$78/Month.

AD CODE NO. 11DK8

162 **Micro 1 Tower 386-20MHz**

A true bargain among machines of its class, the Micro 1 blends solid construction and design with an extraordinarily low price.

164 **SnapShot**

Capture and edit images from any video source—including a TV—with the first fully realized image processing system for the PC.

172 **HP PaintJet**

Crisp, vivid color graphics; speedy text printing; and a reasonable price distinguish this briefcase-size ink jet printer.

176 **Zoom HC 2400**

If you need Hayes functionality but don't want to shell out for the real thing, consider a compatible modem-on-a-board that works even in the fastest computers.

184 **Panasonic KX-P4450 Laser Partner**

Basic business printing is the Panasonic's forte. It beats the price and the text-printing speed of the LaserJet Plus but falls down on graphics.

Micro 1 Tower 386-20MHz

80386 system

PROS: Tower design, inexpensive, quiet

CONS: No disk-caching software, no 32-bit slots

Despite rocketing RAM costs, system prices keep coming down. Micro 1 has the latest steal, a 20-MHz 80386 at half the price of a Compaq Deskpro 386/20, \$1500 less than Dell's System 310, and even \$100 less than a comparable Blackship. Although the Micro 1 lacks 32-bit expansion slots and runs disk-intensive applications rather slowly due to its lack of disk-caching software, it is a solid, usable 20-MHz 80386 at one of the lowest prices ever.

The Micro 1 Tower's \$3335 base price includes 1MB of 32-bit motherboard RAM; a 28ms, 45MB Toshiba hard disk; a 1.2MB floppy drive; one serial and one parallel port; a 101-key Key Tronic keyboard; and a monochrome graphics monitor and adapter. (\$5025 will buy you the system we reviewed: 2MB of motherboard RAM; a 28ms, 110MB Mini-Scribe hard drive; a VGA adapter; a color analog monitor; and an 80387 math coprocessor.)

The Micro 1's only serious flaw is its lack of disk-caching software. As a result, in National Software Testing Laboratories (NSTL) tests not shown here, the machine ran disk-intensive applications like *dBASE III Plus* four times slower than did the Compaq 386/20—despite a fast, 28ms hard drive. In fact, it ran slower than many 16-MHz systems on these tests. When third-party disk-caching software was used, as in the NSTL tests shown, the Micro 1 pulled right up with the Compaq. At least compatibility isn't an issue—the Micro 1 aced the NSTL Crash Test.

The Micro 1's 20-MHz CPU (downshiftable to 6 MHz) alternates between zero and one wait state using an interleaved memory scheme that relies on a 64K cache of high-speed static RAM to intercede between the

CPU and the 100ns dynamic system RAM. You can upgrade system RAM in 1MB increments to a respectable 10MB of 32-bit memory, all socketed on a Mylex motherboard and all accessible at 20 MHz.

Expandability is average. The 8-MHz, one-wait-state expansion bus provides two 8-bit and six 8/16-bit slots. An Adaptec hard/floppy controller that permits 1:1 interleaving (a big advantage for applications like CAD/CAM that load large data files) takes up one 8/16-bit slot. An I/O board and a display adapter take up both 8-bit slots. All six half-height drive bays are externally accessible.

The Micro 1's ergonomics are decent. The sturdy, vertical-standing cabinet is easy to open, and the 220-watt power supply is remarkably quiet. Controls and indicator lights (power and reset switches, a keylock, and a disk activity light) are conveniently located on the front panel; unfortunately, they are placed halfway down the tower, making them a bit hard to reach. No CPU-speed indicator light is included, but the cursor changes shape when you downshift to 6 MHz with a keyboard command.

Peripherals are first-rate. The 101-key Key Tronic keyboard had a sure, quiet touch, while the Amdek VGA color monitor that arrived with the system was crisp and bright from edge to edge.

System extras are mostly impressive too. The Micro 1 comes with a ROM-based setup program and a package of utilities that includes an EMS 4.01 Expanded Memory Manager. The documentation was a bit sketchy, but Micro 1 promises a better set soon.

The Micro 1's price is so impressively low that if the system weren't such a drudge at *dBASE* it would be a total triumph. Even so, solid ergonomics, decent expandability, and a rock-bottom price make it a rare find. Users searching for top speed, bus-master capability, or 32-bit expansion slots should look elsewhere, but budget-minded users thinking about moving up to a 20-MHz 80386 will like what they see. —Eric Brown

WHERE TO BUY

Micro 1 Tower 386-20MHz

Micra 1

557 Howard St.

San Francisco, CA 94105

800/338-4061, 415/974-5439

List price: with 1MB RAM, 45MB

Toshiba hard disk drive, 1.2MB floppy drive, Adaptec 2372 controller, monochrome graphics monitor and adapter, one parallel and one serial port, 101-key Key Tronic keyboard, assorted utilities \$3335

Accessories: amber monochrome graphics monitor and adapter \$135, color monitor with Everex EGA \$534, color monitor with Paradise VGA Plus \$734, NEC MultiSync II with Paradise VGA Pro \$1150; 1MB RAM \$425; 80387-20 coprocessor \$735; 1.44MB 3½-inch floppy drive \$139, 1.2MB 5¼-inch floppy drive \$125, 360K 5¼-inch floppy drive \$95; 45MB Toshiba hard drive \$499, Mini-Scribe 110MB hard drive \$774, 330MB

The Micro 1 Tower 386-20MHz is a fast, fully functional 80386-based computer at a rock-bottom price.

FEATURES EVALUATION

Micro 1 Measures Up

The Micro 1 Tower 386-20MHz lacks forward-looking extras such as 32-bit slots or a multi-mastering bus, but for the features that count today, it stands up well to systems that cost more than twice as much.

SnapShot

Image processing system

PROS: Easy to use, digitizes live images

CONS: Cannot produce ASCII file from scanned text, generates only TIF and EPS graphic files

If you are thinking of spending \$1700 to \$4000 for a scanner that digitizes flat artwork and photographs for desktop publishing, think again. Aldus's *SnapShot* system (\$2300 to \$2900) captures and freezes pictures from any video source—a video camera, VCR, videodisk, or even a live TV broadcast—to create a digital image of virtually anything: flat, round, or moving.

SnapShot is the first full-featured PC product of its kind. Not only does its output compare favorably with that of similarly priced scanners, but the TIF and EPS files it generates are significantly smaller than comparable files from a scanner.

The heart of the system is Aldus's Windows-based *SnapShot* software (\$495). You'll also need to spend between \$700 and \$1500 for an image processing board (or "frame grabber") like those sold by Matrox or Imaging Technology, and buy an analog monitor (in addition to your system monitor) and an image source—probably a video camera. You can buy the elements separately or as a package from Micro D (with a relatively expensive Ikegami camera) for around \$2900.

Using *SnapShot* is a three-step process: capture an image, freeze and edit it, and save it to disk. To get started, all you do is connect the video source and analog monitor to the frame-grabber board, load *Microsoft Windows* (a run-time version is included), and run *SnapShot*.

Displaying a captured image takes two mouse clicks; nothing happens on the regular

Optical Winner

COREL WORM Drives

Compare the features and performance of a COREL Optical WORM with alternative storage options and you'll find that COREL wins hands down !

■ WORM vs Floppies

- 1000 times capacity
- Hard drive speed
- Rugged cartridges

■ WORM vs Tapes

- 12 times capacity
- Hard drive speed
- Much more reliable
- No drop out
- Withstands X-Rays

■ WORM vs Bernoullis

- 20 times capacity
- Lower cost/Mbyte
- Modern technology
- Multiple drive vendors

■ WORM vs Erasables

- Proven technology
- No accidental erasure
- Lower cost/Mbyte
- Ideal for archiving/audit
- Proven media
- Available NOW

■ Total PC Compatibility

COREL WORM drives are 100% PC compatible. Use them with all your existing applications and standard DOS commands just like your floppy drive.

■ "Plug and Play"

Everything you need is included: Drive, Software, Cable, and SCSI Interface Card and Manual. Your WORM can be running minutes after opening the box.

■ Low cost/Mbyte

Under \$15/Mbyte of on-line capacity. This is almost as low in cost as tape but with random access, greater reliability and longer life media.

■ Proven Software

COREL leads the way in PC compatible WORM drives with thousands of installations

■ Proven Hardware

COREL uses proven drive mechanisms from industry leaders such as Panasonic, Ricoh and Maxtor.

■ Hot Line Support

Just in case you have any problems, COREL provides Hotline and Bulletin Board support to help find the solution quickly and efficiently.

■ Dozens of Applications

- Databases
- Digitized music
- Archiving (15 yr.min. life)
- Back-up copies
- Multiple copies
- Graphics libraries
- CAD-CAM libraries
- Image files
- Software libraries
- Full-Text Retrieval
- LAN File servers
- Medical Imaging
- Audit trails
- CD-Rom development
- Data distribution
- Unix applications
- Workstation back-up
- Tape replacement
- Bernoulli replacement
- Security Systems
- Digitized voice
- Multi-media

■ Choices of Drive

Each COREL drive is a complete ready-to-go subsystem.

- **COREL PC400 \$2,895**
400 Mbyte capacity (2 x 200/side)
Cartridges \$99 each.
- **COREL PC600 \$3,795**
600 Mbyte capacity (2 x 300/side)
Cartridges \$180 each
- **COREL PC800 \$3,995**
800 Mbyte capacity (2 x 400/side)
Cartridges \$160 each.

■ Optional Developer's Kit

Allows easy modification of COREL software for custom applications

- **COREL SW76 \$1,500**

■ Other Systems Available

COREL has WORM subsystems for:

- Macintosh
- Novell LAN Fileservers
- 3COM LAN Fileservers
- UNIX (Available soon)
- Rugged Military

■ Order Now from COREL

No delays; you will receive your drive within a few days of your order. Call or Fax us now.

NSTL TEST REPORT

Micro 1 Tower 386-20MHz

The Micro 1 hangs in there with the 20-MHz pack on most tests when a third-party disk cache, is used.

Microsoft Word

dBASE III Plus

1-2-3

The Micro 1 was tested with a 110MB hard disk, 2MB of RAM, and a 64K memory cache. Super PC-Kwik was used to provide a disk cache of 256K of extended memory. The IBM PS/2 Model 80-111 was tested with a 115MB hard disk, 4MB of RAM, and a disk cache of 256K in extended memory. The Compaq Deskpro 386/20 was tested with a 135MB hard disk, 4MB of RAM, a 32K memory cache, and a disk cache of 256K in extended memory.

Microsoft Word 4.0

A Microsoft Word macro loads a 35-page, 140-paragraph document and performs search-and-replace and spell-checking operations. The first page of the document is then printed. Although the results of the benchmark depend primarily on processor and memory access speeds, display adapter and hard disk speeds are also contributing factors.

dBASE III Plus 1.1

The dBASE III Plus test measures the time required to prepare and print a report of post-due invoices. The report includes calculated fields and is based on three files: a 500-record customer file, a 1000-record invoice file, and a 2000-record item file. When disk caching is not used, the random access speed of the hard disk is, after processor speed, the most significant factor in this benchmark. With disk caching, sequential read performance becomes more important than random access.

Microsoft C

AutoCAD

1-2-3 2.01

In this benchmark, a 1-2-3 macro executes a series of recalculations using five different formulas within a 75-by-75-cell matrix. Because there are few screen updates and no screen access is required, the results depend almost entirely on processing and memory access speeds.

Microsoft C 5.0

The Microsoft C benchmark measures the time required to compile and link XLISP, a public-domain program composed of 25 C source code files. The most important factors in this benchmark are processor and memory access speeds. The performance of the hard disk is also a factor; generally, disk caching has little effect.

AutoCAD 9

In this benchmark, a three-dimensional sample drawing is retrieved and displayed using AutoCAD's EGA driver. The zoom function is used to display the drawing from various perspectives; then the full drawing is printed. The results of the benchmark depend primarily on the speeds at which the processor and coprocessor operate and at which memory is accessed. The performance of the display adapter and the hard disk also have some effect.

Data based on tests designed and conducted by National Software Engineering Laboratories (NSTL). All rights reserved.

monitor, but the analog screen snaps to life with a live black-and-white image. The Auto-Gain option optimizes contrast and brightness automatically, or you can adjust the picture manually, just as you would on a TV. An impressive array of image controls can be accessed simply by popping open a menu and clicking.

Next you freeze and edit the image. *Snap-Shot* offers a number of handy options to sharpen and touch up image quality; filter

color input; digitally remove unwanted elements; crop, enlarge, rotate, and combine images; create special effects such as solarization; and paint and blend pixels. For example, the blend option erases blemishes by combining values of neighboring pixels. Editing changes are displayed on the analog monitor.

Once you're satisfied, you can save the image as a TIF or EPS file, which can be used

A simple explanation of our new VGA Plus 16™ card.

For the price of this...

you get this.

© 1988 Paradise Systems, Inc.

Now you can get high performance VGA and still stay afloat financially.

The new Paradise VGA Plus 16 card is the latest addition to our growing family of VGA products. Its 16-bit bus and BIOS rushes information to your screen up to 400% faster than IBM's Display Adapter. And its exclusive AutoSense™ feature guarantees trouble-free high performance.

You also get 256 brilliant on-screen colors with 640 x 400+ resolution. Or 16 colors in 800 x 600 resolution, for even crisper detail.

Plus you get complete hardware and software compatibility, including downward

compatibility with all pre-VGA standards. And the Paradise VGA Plus 16 card comes complete with a long list of software drivers to support all your favorite programs.

In simple terms, it's the best high performance value going. At only \$499 retail.

For more information on any member of the Paradise VGA family — VGA Plus 16, VGA Plus™ or VGA Professional™ — please call Paradise at (415) 960-3353. Or call the dealer nearest you.

Circle 297 on reader service card

To create the world's first data cartridge tape our engineers had to give up a lot of dreams.

To bring the world its first data cartridge tape, it wasn't unusual for our engineers to put in a little overtime on their overtime. Or occasionally miss the late show. Or even miss the late, late show.

And even after the data cartridge

tape was born, they still refused to lay low. It had to be perfected.

So, instead of counting sheep, our engineers counted patents. In fact, over ten of them are in use today. A number no other data cartridge tape manufacturer

can even come close to matching.

During other sleepless nights, they'd toss and turn over technological breakthroughs like proprietary Blackwatch™ back-coating, No End Play (NEP) hub designs, Dura-Stat™ drive rollers and one piece tape guides for precision tracking.

The result was the ultimate data cartridge tape.

And to this day, it's number one in the world by a long shot.

So, if you're looking for data cartridges and diskettes that offer durability, longevity and superior error performance, try one of ours.

We guarantee they'll work as hard as our engineers do. Day. And night.

For more information,
call 800-888-1889, Ext. 30.

Supporting the dream.

Circle 124 on reader service card

by compatible programs such as *WordPerfect 5.0*, *PageMaker*, *Ventura Publisher 2.0*, and *IBM Interleaf Publisher* and printed with PostScript devices such as IBM's Personal Pageprinter and Apple's LaserWriter. *SnapShot*'s default is an 8-bit gray-scale TIF; if your target program requires less data, you can use a lower resolution gray-scale format.

The *SnapShot* system is a pleasure to use. In fact, scanner manufacturers have reason to worry. The only drawbacks to *SnapShot* are that, unlike some scanners, it lacks OCR capability, and that it is more difficult to use for flat artwork and photos. Nonetheless, if you are a desktop publisher and need a jack-of-all-trades image digitizer, take a look at *SnapShot*; it may turn you into a video pioneer sooner than you think. —Alan Southerton

HP PaintJet

Color ink jet printer

PROS: Sharp color graphics, good text printing speed, no smearing

CONS: Print features accessible only via software, no emulations

Colorized black-and-white movies may be déclassé, but a splash of color can add a touch of class to a boardroom-presentation transparency, a CAD/CAM printout, or an otherwise dreary *document noir*. One way to give your output Technicolor punch is with the \$1395 Hewlett-Packard PaintJet, a moderately priced, 80-column, ink jet printer that produces sharp, vibrant color text and graphics. It's faster than Xerox's wide-carriage 4020 (see *The Hardware Shelf*, PCW, October 1988) and \$100 cheaper.

HP's engineering acumen is evident in most aspects of the printer's design. The briefcase-size unit weighs in at only 11 pounds. Connections, DIP switches, panel controls, and ink cartridges are all easily accessible. The top-mounted control panel has membrane switches, plus LEDs that indicate paper-out and paper jams. Like the HP DeskJet (see *The Hardware Shelf*, PCW, June 1988), the PaintJet uses an innovative ink cartridge/printhead combination that elimi-

NSTL BENCHMARK TESTING

The exclusive test facility for *PC World*, **National Software Testing Laboratories (NSTL)**, is an independent organization that specializes in evaluating personal computer hardware and software. A recognized pioneer in state-of-the-art test design, NSTL believes that the most useful benchmark tests measure how well products perform when executing typical business tasks. NSTL testers follow detailed test plans that simulate normal operating conditions. A controlled testing methodology ensures objective, accurate, and consistent results and gives consumers a sound basis for making purchase decisions. NSTL publishes its test results in *Software Digest Ratings Report*® and *PC Digest*.™ Neither publication accepts advertising. NSTL is located in Philadelphia, Pennsylvania.

WAITING

FOR A PRINTER

Can you afford
to tie up your
PC, your
business, &
your profits . . .

. . . simply to wait
your turn at the
printer?

PRINTER SHARING WITH BUFFALO SL™

Best Value — More features for less money.

More ports, buffer, flexibility and options than any other peripheral sharing device in its price range. 10 ports

The Buffalo SL can greatly enhance a network; but if you don't need a file server, then the Buffalo SL is the ideal LAN alternative at a fraction of the cost.

Sub-LAN connectivity — Peripheral sharing and buffering.

6 Serial Ports: All ports user configurable as input or output; ports individually configurable for all serial parameters and for baud rates to 19,200.

4 Parallel Ports: All ports user configurable as input or output. Line drivers boost output to 400 ft.

Simultaneous input and output; all ten channels.

Cascade capability: Command directed routing of virtually an unlimited number of PCs to any number of printers on the same system.

Buffer size: From 0KB to 4MB, easily upgradeable by the user in minutes.

File transfer: Serial channel PC to PC with your software.

Easy Installation and Use — Factory supported, toll free.

Simple installation software for configuration and menu setup.

Menus: Pop-up software displaying user configurable menus uses less than 11KB in text mode.

Paused output function: Data may be cleared, paused, or re-directed after input to buffer.

Next available printer: Automatic routing of data to next available printer, if desired.

Warranty: One year

Guarantee: 45 day money back satisfaction guaranteed.

BUFFALO® Keeps your business running

Call now and talk to a person with the technical background to help solve your connectivity problems.

BUFFALO

The inexpensive peripheral sharing solution

(800) 345-2356

Buffalo Products, 2805 19th Street SE, Salem, OR 97302 (503) 585-3414

Circle 215 on reader service card

Hewlett-Packard's PaintJet uses 60 nozzles and two ink cartridges to print crisp color text and graphics.

nates messy refills. Unfortunately, the printer's paltry 8K buffer is not expandable.

Precision craftsmanship is also reflected in the PaintJet's gorgeous color output. The printer uses two ink cartridges and 60 nozzles to produce up to 330 distinct shades. It can generate graphics with a resolution of 180 dots per inch, and unlike with many ink jet units, its NLQ text quality approaches that of a good 24-pin dot matrix printer. However, it's no speed demon—at least not at graphics; the PaintJet takes a full 4 minutes to print a page of color graphics. Text mode is much quicker; a 250-word, double-spaced page churns out in 30 seconds.

The PaintJet packs three built-in fonts: 10-pitch Courier and 12- and 18-pitch Letter Gothic. It offers nine foreign-language character sets as well, plus boldface, underlining, and expanded and compressed text styles. On the downside, these features are accessible only via your applications or escape codes.

Unlike many ink jet printers, the PaintJet doesn't *require* special paper, but output quality does vary widely depending on the grade you use. HP recommends its own coated paper, which comes in cut sheets and fanfold. When you use this stock, the PaintJet's output is similar in quality to that of the Xerox 4020.

The PaintJet is obviously slower and produces lower resolution output than a high-end thermal-wax color printer like the \$8000 Tektronix 4693D. While it's faster and cheaper

than the Xerox 4020, it has a narrower carriage, and per-page costs are higher. Still, if you're looking for a printer that produces quality color graphics, and a low sticker price is your highest priority, give the PaintJet a look. —Wes Nihei

WHERE TO BUY

HP PaintJet

Hewlett-Packard
1820 Embarcadero Rd.
Palo Alto, CA 94303
800/752-0900

List price: with one parallel, serial, or HP-IB port \$1395

Zoom HC 2400

Internal 2400-bps modem

PROS: Low price, works in high-speed buses, ProComm included free

CONS: Transmission errors over very noisy lines

The Zoom HC 2400 is a low-priced (\$199), Hayes-compatible, internal 2400-bps modem designed to work in even the fastest computers. This half-length board includes a number of tempting features, such as a built-in speaker with an external volume control, a free copy of *ProComm*, and over \$275 worth of discounts and on-line connect time. Considering that you can easily spend over \$500 for a similar unit from Hayes, the Zoom HC is well worth a close look.

What's to say about an internal modem? You slide it into an 8-bit or 8/16-bit slot, put the cover back on your PC, and if it works, you forget about it. The Zoom HC 2400

IBM®, AT&T®, H-P®, NCR®, SUN®, AND ZENITH® ALL HAVE A POWERFUL WEAPON.

In the computer industry, every manufacturer wants to build their machines so fast, powerful, and easy to use that it gives them an edge on the competition. So at first, it seems surprising that these intense competitors all use the same chip: Intel's 386™ microprocessor.

But when you think about it, this chip not only gives their machines blazing performance. It's

also fully compatible with the broadest range of software available today, and the software that's coming tomorrow. Which is why the 386 chip has become the common denominator in computing.

So if you're buying a new computer, make sure it has an Intel 386 chip inside. Because in today's tough business environment, it's good to know the ultimate weapon is sitting on your desk.

☐ Managing Your Money 4.0

Have you ever had a question regarding mortgage refinancing, college planning, or retirement? If so, Managing Your Money can help. Managing Your Money can do the easy stuff like provide a complete checkbook and budget program, help in tax planning, track your net worth, or evaluate your family's life insurance. It can also do the not-so-easy stuff, too, like recording, coding, and analyzing investments, tallying realized and unrealized gains and losses, suggesting tax strategies, printing Schedule D, and more. Either way, Managing Your Money is a lot of program for a little investment.

OUR POLICY

- We accept VISA and MASTERCARD only.
- No surcharge added for credit card orders.
- Your card is not charged until we ship.
- If we must ship a partial order, we never charge freight on the shipment(s) that complete the order (in the U.S.).
- No sales tax.
- All U.S. shipments insured; no additional charge.
- APO/FPO orders shipped 1st Class Mail, charged by weight.
- Allow 1 week for personal and company checks to clear.
- COD max. \$1000. Cash, cashier's check, or money order
- 120 day limited warranty on all products.
- To order, call us Monday through Friday 9:00 to 9:00, or Saturday 9:00 to 5:30. You can call our business offices at 603/446-3383 Monday through Friday 9:00 to 5:30.

SHIPPING

- Note:** Accounts on net terms pay actual shipping
- Continental US:**
- For monitors, printers, Bernoulli Boxes, computers, and hard drives, pay actual charges. Call for UPS 2nd-Day & Next-Day-Air.
 - For all other items, add \$3 per order to cover UPS Shipping. For such items, we automatically use UPS 2nd-Day-Air at no extra charge if you are more than 2 days from us by UPS ground.
- Hawaii:**
- For monitors, printers, Bernoulli Boxes, and computers, actual UPS Blue charge will be added. For all other items, add \$3 per order.
- Alaska and outside Continental US:**
- Call 603/446-3383 for information.

PC Polish.

Rise and Shine.

(Or, the incredible brightness of PCs).

Back when the IBM-PC was still a gleam in some engineer's eye, the inhabitants of Marlow, NH (pop. 555) already knew the value of getting a glow on. Nothing like a little luminosity to brighten up your day. So, whether we're polishing the pick of our local crop, buffing the bumpers on our buggies and bikes, or preparing your peripheral for packaging, we make sure that everything we do radiates perfection. Inside and out.

Get some sheen in your machine.

Over the years, PC owners of every persuasion (PC, XT, AT, PS/2) have taken a shine to the way we do business here in Marlow. Orders fly out with blazing speed. Our product ads dazzle with details about copy protection and warranties. And every sales rep is primed with a profusion of particulars pertaining to

the power and performance of every product we peddle. So, next time your PC starts to lose its luster, give us a call. Remember, we have a special crew of technical titans to give customers toll-free support. They've explored the pinnacles and perimeters of printer performance. They can clarify the most convoluted cable connections. Rumor has it, they even know who put the RAM in the Ram-a-lam-a-ding-dong.

What's this about free macs?

At PC Connection we know that all that glitters need not be sold. Some of it should be given away. Like this month's delicious offer. An assortment of premium macs

and other apples from nearby glitzy groves, packed in a classy, made-in-New Hampshire gift crate. It's free with any order of \$500 or more between now and November 30.

Just call 1-800/243-8088 or 1-603/446-3383, M-F 9:00 to 9:00; Saturday to 5:30. If you're planning to visit please call ahead.

How about these apples? Packed in an old-style wood box with slide cover, featuring our delectable mascot. Offer not available to net accounts. Offer good in Continental U.S. ONLY. One per customer.

For IBM Personal Computers exclusively.

NSTL TEST REPORT

Zoom HC 2400 Modem

Under noisy line conditions, the Zoom HC 2400 is more likely to develop errors while sending a file than the Hayes Smartmodem, but as this chart shows, in answer mode the Zoom matches or beats the Hayes.

Answer mode

Signal-to-white-noise ratio

Impairment level	7:1	8:1	9:1	10:1	11:1	12:1	13:1	14:1	15:1	16:1	17:1	18:1	19:1

errors 91-100 81-90 71-80 61-70 51-60 41-50 31-40 21-30 11-20 1-10

NSTL tested each modem's ability to accurately transmit data over noisy telephone lines using the TAS 1010 VoiceBand Channel Simulator. The system includes the Network Simulator, which mimics public and leased lines, and the Modem Test Unit, which automatically runs desired data back and forth between the test modem and a control Hayes Smartmodem 2400 and calculates resulting data transmission errors. In these tests, 10K simulated test files in 100-byte blocks were received by each examined modem and the block errors measured and reported. All tests were performed in answer mode. Starting values for the

key impairments tested—white noise, phase jitter, and amplitude jitter—were based on AT&T Bell Labs' 1982-1983 *End Office Connection Study*. White-noise impairments ranged from 7:1 to 19:1. An impairment was lessened one step at a time to determine the point at which a modem could correct all the errors in a transmitted block. (In the Zoom HC 2400 white-noise test, for example, at the 13:1 signal-to-noise ratio, an average of 59 out of every 100 blocks received contained errors. The error rate dropped to 0 at 17:1.) Amplitude jitter tests were conducted in the same manner. The intensity of the impairment ranged

from a maximum of 44 percent of amplitude jitter to 15 percent. Phase jitter intensities spanned 43 degrees to 15 degrees.

Note: The impairments encountered on average phone lines are much lower, and these modems should have no difficulty communicating under normal circumstances. The average signal-to-noise ratio is 34:1; amplitude jitter is 4 percent; and phase jitter, 8 degrees.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

works. It responded quickly and reliably to all Hayes AT commands, going on and off line smoothly, dialing and downloading without incident.

Performance is fine under normal phone line conditions. When the line gets unusually noisy, the Zoom is more finicky sending files than the pricier Hayes 2400. In answer mode, however, as NSTL tests show, the Zoom matches or beats the Hayes.

Several nice design touches are built in. A speaker (often left off internal modems) keeps you informed of what the modem is doing—and thanks to the external volume con-

trol, there's no problem making the Zoom heard. A jumper lets you address the modem as COM3: or COM4: if your first two COM ports are tied up by printers or mice. And while some internal modems may not work in machines like the Packard-Bell, which boast bus speeds in excess of 8 MHz, the HC 2400 is designed to accommodate bus speeds of up to 12 MHz.

A copy of the popular *ProComm* communications package is also included. It offers all the standard telecommunications features

Total Backup Solutions.

CORE provides total backup solutions. COREfast for diskette and hard disk. COREtape for 40MB minicartridges and 60 and 150MB standard tape units (100 and 250MB available soon). COREtape drives are available in both internal and external models.

Software Solutions. Software drives the backup process. Buy a proven method that works the same way for all backups. CORE's single solution can help you avoid having to learn different systems.

Hardware Solutions. Choose a single solution that will operate successfully on a range of computers. COREtape works with the full line of IBM computers and most compatibles, including internal operation in the PS/2 Models 60/80, and Compaq's 386/20.

Network Solutions. Backup a server across your network to either a diskette, tape or hard disk. Be secure that CORE backup systems support major LAN networks including Novell, 3Com and IBM Token Ring.

COREpower Your Backup. Contact your nearest dealer or CORE representative today.

When people
think you
only make
mainframes,
you'd better
have more
than a good
line to sell PCs.

UNIX is a registered trademark of AT&T. Intel is a trademark of Intel Corp. Microsoft, MS-DOS and XENIX are registered trademarks of Microsoft Corp. © 1988 UNISYS CORP

Mention Unisys and everyone will probably say mainframe. It's true we have a proud tradition of leading technology in that area.

We also make mini-computers, a full line of UNIX O/S-based systems, and offer just about everything else you would expect from a \$10 billion international computer company.

Including an entire family of personal computers.

But we know small businesses need to know more before they'll invest in our line.

So start with the latest Intel 80286 and 80386 technology. Then choose from a wide range of PC operating environments, including MS-DOS, XENIX, and OS/2, all of which run standard off-the-shelf software.

Now add our Software Guide to Marketers, which lists the dealers

and Value-Added Marketers who sell specific software applications that can solve your specific business problems.

Contact us today and ask for your directory so you can find out who sells Unisys PCs and small business systems in your area. You'll discover we offer much more than a good line. Call 1-800-547-8362, ext. 91.

UNISYS

The power of ²

plus a few unusual ones, such as the ability to set up a fully featured BBS.

Installation is a snap. There are no DIP switches, and unless you have to change the COM port setup, you won't need to move any jumpers. It took less than 20 minutes to get the modem installed and running, and it worked perfectly the first time out. Most of the installation manual is extremely clear, with plenty of pictures and a blessed absence of technical jargon.

So if you're in the market for a low-priced 2400-bps modem with free telecommunications software and on-line-service discounts, there is something to say about the Zoom HC 2400 internal modem: Buy it. —*Sam Hagerty-Hammond*

Panasonic KX-P4450 Laser Partner

Laser printer

PROS: Fast text printing, convenient front-panel controls

CONS: Limited software support, poor gray-scale graphics reproduction, a pain to install

If you need a quick and convenient way to print business letters, Panasonic's KX-P4450 Laser Partner may be exactly what you're looking for. This \$2595 LaserJet Plus clone comes with 512K RAM, costs \$100 less than HP's LaserJet II, and prints text 3 pages per minute faster. On the downside, it's a bit

slower at printing graphics, has problems reproducing grays, lacks broad software support, and is limited to a total 1.5MB RAM versus the LaserJet's 4.5MB.

The Panasonic KX-P4450 is built for a 5000-pages-per-month duty cycle (as opposed to the HP's 4000). Its front panel is easy to use, letting you choose among fonts and emulation modes and telling you exactly where paper is jammed. It comes with two easily loaded letter-size paper trays that hold a total of 500 sheets; the face-down output tray accommodates 250 pages, and output costs less than 3 cents per page.

The Laser Partner has 11 resident fonts—5 more than the LaserJet II—including several sizes of Courier and Courier Italic (none exceeding 12 point) and proportionally spaced Century and Century Italic. (Several optional font cards from Panasonic will be available soon.) However, unless you own *WordPerfect 5.0*, you won't be able to use more than one internal font. *WordPerfect 5.0* is the only package that supports the Laser Partner by name. With other software, you must fall back on the printer's LaserJet Plus, Epson, IBM Proprinter, or Diablo emulations. As with many LaserJet clones, the Laser Partner's LaserJet emulation does not extend to built-in fonts, so you're stuck with the default Courier typeface.

Fortunately, desktop publishers have another way to get at fonts. With the 1MB memory upgrade (\$449) installed and LaserJet emulation, they can use downloadable fonts for the LaserJet Plus, including Bitstream's *Fontware* system for *PageMaker*, *Ventura*, *Microsoft Word*, and *WordPerfect*. However, like the LaserJet Plus it emulates, the Laser Partner limits all fonts to a maximum size of 30 points.

The Laser Partner does a splendid job of printing black-and-white line art, but graphics that depend on subtle variations of gray are a problem. A printout of a two-tone Corvette emerged in one tone only: muddy. Bars in a *Microsoft Chart* graph that were supposedly distinguished by their shades of gray proved indistinguishable. Panasonic claims the gray reproduction has been tweaked

**Now you don't need impressive assets
to get an impressive image.**

The new Star NX-1000 Multi-Font

This new dot matrix printer can do a lot for your image. For a lot less.

The NX-1000 Multi-Font gives you four built-in fonts and over 20 typestyles. It delivers draft quality text at 144 characters per second. High-resolution, near-letter-quality documents at 36 cps. And crisp, clear graphics.

You'll also find built-in friction and tractor feeds. An easy-to-use control panel that puts typestyles, print pitch and more at your command. And a paper parking mechanism that lets you feed single sheets while keeping sprocket paper in place. All this ImagePower is yours for just **\$299.00***.

The new Star NX-1000 Rainbow

You can see six differences between the Star NX-1000 Rainbow and the NX-1000 Multi-Font: red, yellow, blue, green, orange and violet. The Rainbow prints in all these colors, plus black, to give you eye-catching reports, letters and charts.

The Rainbow has all the features of the Multi-Font, including four built-in fonts, excellent near-letter-quality text and graphics, and convenient paper handling functions.

But the Rainbow not only offers attractive print-outs, it even comes attractively priced at **\$379.00***.

To see where you can find the Star NX-1000 Series, call **1-800-447-4700**.

REPLACE YO

PC WORLD
"Upgrade product of the year."
...PC World

"Editors' choice"
...PC Magazine

Installed in minutes, the Renegade 386™ motherboard turns any IBM PC, XT, AT or inexpensive clone into a powerful new computer, lightning fast with both old software AND new OS/2 releases.

Is this you?
You would like to have extraordinary computing speed and power. You want number crunching ability. You need complex CAD capabilities. Or graphics. Or multi-tasking. And you haven't got it. (And you don't want to spend a fortune to replace good equipment with the newest standard.) Weep no more. You can turn your *present* system into the latest, high-performance system that will *equal or exceed the best of the new computers*.

Renegade 386™ **A new heart and brain for your computer.**

Renegade Technologies offers designers, engineers, architects, and computer-dependent businesses a simple and reliable alternative to obsolescence. Or the unreasonable expense of a new system.

Simply replace the "motherboard" of your present system with a Renegade 386™ motherboard.

It takes a screwdriver and less than 20 minutes. And costs but \$1695.

That's *thousands of dollars less* than a new IBM System/2 Model 80.

But it gives you more than just the latest industry standard. You can run your old software on it. Probably anything you now use on your XT or AT. Big Blue can't do that.

You can use your present 16-bit peripherals. (If you've looked at PC "add-on" cards, you already know your old equipment would be useless.)

But with Renegade 386™ you'll have to find some other excuse to throw away your current modem, network card,

Multi-task with Lotus 1-2-3 and other applications running side-by-side on the Microsoft Windows/386 desktop.

EGA or disk controller cards.

The Renegade 386™ board comes with an iron-clad *one year limited warranty*. It uses genuine U.S. made Intel 386 chips and is designed and manufactured in the U.S.A. by Hauppauge Computer Works. Hauppauge is a major developer of software

support for Microsoft and IBM products, and is producer of the highly respected Hauppauge 8087 or 80287 highspeed math coprocessors. Over 50,000 have been sold.

Major computer magazine reviews in the last year have hailed our Hauppauge-made board as a major breakthrough in a high speed, high power, high performance upgrade product.

Not an accelerator card. Not a "turbo" gimmick. **Renegade 386™ gives you a full-featured new computer.**

Thanks to Renegade's 80386 microprocessor your computer will now boast a 32-bit data path—and a clock speed of 16 MHz with zero wait state access. Up to 8 expansion slots are provided depending on your computer configuration.

Your "new" computer also will now have **1 Megabyte of 100ns RAM**. This is *not* a naked board. And it also includes a 32-bit high-speed RAM expansion slot which you can populate with up to *15 Mbytes* of system memory.

UR MOTHER

In practical terms that simply means that programs like Lotus 1-2-3 or new products like Foxbase 386, and almost anything else, *will run faster than anything you have ever seen.*

Which is a minor problem for some folks who are playing computer games on company time. Renegade 386™ may run them at speeds far too fast for human reactions.

The world is not perfect.

Faster, easier presentation graphics with newest software releases.

Otherwise Renegade 386™ is perfectly compatible with products like AutoCAD, Aldus PageMaker, Microsoft Windows, Ventura Publisher, the Novell Network and siz- zlers like Paradox 386. We haven't yet found a popular program we can't run with it.

Power hungry? Equip Renegade 386™ with even more RAM—without speed loss.

Add up to 15 Mbytes of system memory with Renegade™ expansion modules that plug right into your Renegade 386™ 32-bit expansion slot. *And run with no loss of speed*—something no IBM or Compaq model can match.

There's a lot of confusion in computer claims, but the fact is that with *zero* wait state, our 16 MHz is effectively the same as those highly touted machines running at 20 MHz with one wait state.

So plug in Renegade™ expansion modules in 2-and 4-Megabyte increments and run Windows 386 applications at the speed God intended.

\$1695

The Renegade 386™ motherboard. Next generation performance for \$sthousands less.

30 DAY TRIAL OFFER AND OUR NO-RISK GUARANTEE

We understand perfectly that you have no reason to believe anything you read. Including this ad. (We read too.)

So we invite you to evaluate the Renegade 386™ yourself. Call and order one. We'll send it with detailed, clear instructions. Use it in your own system, on your own work, for 30 days. Try it for brilliant presentation graphics, make massive and instant spreadsheet recalculation, run huge memory-hungry CAD programs. Wring it out—on anything your software is up to.

But don't stop there. Challenge your best computer technician. Or a consultant whose opinion you value. Ask them to compare Renegade 386™ dollar for dollar, and feature for feature, with the best on the market.

After 30 days, if it isn't for you, for *any* reason, we'll take it back and write you a check immediately for your full purchase price.

The risk is all ours. But we urge you not to wait. RAM chip prices are going up every day due to world-wide chip shortages. We can guarantee this current price only if you order now.

Call toll-free today. You have nothing to lose but yesterday's computer system.

NSTL TEST REPORT

Panasonic KX-P4450

The Panasonic KX-P4450, a LaserJet Plus—compatible printer, leaves the HP far behind when printing text but fails to match the LaserJet's graphics performance.

Pages per minute

Text printing

Graphics printing

Objective blackness

An IBM PC AT with 640K of RAM was used to perform all tests. Both printers were configured with maximum allowable memory, and connected to the AT via the parallel port.

Pages per minute

This benchmark measured the number of pages each printer could produce in the second, third, and fourth minutes of printing. A 40-page document was sent to the printer, and at the end of the first minute the pages in the output tray were removed. Then the total number of pages produced in the following three minutes was divided by 3 to determine the average number of pages per minute.

Text printing

This benchmark measured the time it took to print a five-page text document, which was sent to the printer using XyQuest's XyWrite III.

Graphics printing

This benchmark measured the time it took to print a four-page document created using Xerox's Ventura Publisher. Each page was different, and each included a scanned photograph, raster graphics, and text.

Objective blackness

To perform this test, a large black rectangle was printed on a white background and a densitometer was used to gauge the relative blackness at each corner and the center of that rectangle. These measurements yielded five results that were then averaged. The higher the number, the blacker the rectangle. The possible range of scores was from 0, no light absorption, to 2.5, or 99.99 percent light absorption.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

since our review unit was built, but more than a tweak will be needed.

Finally, the Laser Partner has a dirty secret: Its developer cartridge leaks if you're not *very* careful. In fact, the printer is a pain to install. Worse yet, while the documentation is decent, there's nothing in the manual about how to prepare the unit for shipping. All a technical support representative had to say on the subject was, "We don't recommend moving it much."

Panasonic's ads claim the Laser Partner is "ahead of its time." Actually, in some respects it's still back in the bad old days when letters were all an office printer needed to produce. The Laser Partner is an exemplary text performer, but its slow, muddy graphics output, limited font access, 1.5MB RAM limit, and awkward installation render it less attractive for a broader range of office tasks.

—Bill Taborchek

"THEY USED TO SAY I WAS CRAZY."

For years they told me I was crazy. First I recommended they replace those expensive word processing stations with PC's.

What happened? Secretarial productivity doubled, and every secretary now has a PC word processor on her desk.

Then I recommended we supplement our mainframe with PC-based systems for every department.

What happened? Now the vital information is easily available to everyone.

Yesterday, less than a month after I recommended we buy the MaynStream 2200HS Tape Backup System, our building was hit by lightning. It took out two of our PC servers, each with 850 megabytes of vital information.

What happened? Nothing! We simply restored the information using the MaynStream 2200HS. You see, every day without fail, we backed up those servers. Today it paid off and it will tomorrow. The MaynStream 2200HS Tape Backup System. That's not crazy, that's plain smart.

THE MAYNSTREAM 2200HS TAPE BACKUP SYSTEM.

☐ Novell Approved Software ☐ XENIX compatible ☐ 2.2 gigabytes of data on one tape ☐ Portable, allowing one unit to serve many systems ☐ Read-After-Write ☐ Password Protection ☐ 250 Kbytes/sec Transfer Rate ☐ The Editor's Choice of PC Magazine, PC World, InfoWorld, and LAN Magazine.

192 **Sprint 1.0**

Borland's new budget word processor is crammed with features, but complicated formatting and a limited previewer will make potential buyers think twice.

194 **VP-Planner Plus 2.0**

Already a Best Buy in our eyes, this multidimensional spreadsheet's enhanced speed and new features make it look even better the second time around.

208 **PFS: First Publisher 2.0**

New templates for everything from business cards to multicolumn newsletters, along with improved printer support, fill out this low-end desktop publisher.

212 **GrandView 1.0**

Symantec dubs it a personal information manager, but *GrandView* is really a top-notch outliner with strong project-tracking tools built in.

218 **EasyCAD 2 2.05**

Feature-rich, fast, and flexible, the new release of this easy-to-learn drafting program equals much costlier rivals.

220 **HB-Browser**

Peek at data base records from your spreadsheet or word processor with Cauldron's RAM-resident utility. *Browser* comes in two configurations—both with healthy appetites for RAM.

Sprint 1.0

Word processor

PROS: Low price, permits multiple open files, easy to customize, choice of user interfaces

CONS: Awkward formatting, limited previewer, bugs

For a scant \$200, Borland's *Sprint* stands up to word processors costing twice as much. Snap-on user interfaces give it the quick-change wardrobe of a chameleon, and a potent macro-programming language gives users unparalleled power to customize the program. Unfortunately, *Sprint's* formatting is awkward and difficult, and the limited previewer fails to compensate for the editor's poor approximation of printed results. *Sprint's* initial release is further hampered by a number of annoying bugs.

If formatting isn't a major concern, *Sprint* could be your ticket to fly. Loosely based on *WordStar* but with much more functionality, the editor is largely free of the bugs and design flaws that hamper the formatter. Block operations are well implemented, cursor movement is flexible, and as NSTL tests indicate, performance is fast. *Sprint's* file management features are some of the best in the business. An auto-save feature saves text every 3 seconds, and the program loads into memory the last 24 files worked on, letting you quickly switch files and cut and paste among them.

More advanced editing tools are somewhat flawed. For example, the 100,000-word spelling checker includes a handy proof-as-you-type option, but it runs slowly and won't fix repeat misspellings. And the thesaurus is unable to adjust for plural or adverbial endings.

Much of *Sprint* incorporates a rich macro programming language, so the program offers a high level of customization. Any user can easily redefine command sequences, record macros and boilerplate text, or choose from 40 predefined macros. More experi-

enced hands can write and edit macros, customize menus, and even create new features and interfaces.

Such flexibility makes possible a feature unique to *Sprint*: alternative menu interfaces that mimic the command structures of *WordPerfect*, *Microsoft Word*, *WordStar*, *SideKick*, *FinalWord II*, and *EMACS*. These interfaces don't offer all the functionality of the originals—and in some cases won't let you access all of *Sprint*'s advanced features—but they could be useful for offices that hire temporary workers.

Sprint's three native interfaces (Tutorial, Basic, and Advanced) use Borland's trademark pop-up menus. Type a command's first letter (or highlight the command and press <Enter>), and well-designed menus cascade across the screen. But when you reach the twigs of the menu tree, defaults are frequently lacking, and you often have to type in programming commands.

Because *Sprint* is split between editing and formatting modules, what you see is nothing like what you get. To view even the most basic text formatting (such as double-spacing), users will find themselves constantly switching to a separate previewer. That utility is sadly lacking—you can't scroll backward, jump to a page, view a full page, display graphics, or preview specific elements. When you enter the previewer, *Sprint* lists formatting errors along with offending line numbers, but the error messages are cryptic and sometimes inaccurate. Annoyingly, if *Sprint* deems the errors severe, it won't let you print or even preview the file.

Sprint's editor/formatter split also spawns a messy screen display. Do a little formatting, and the screen quickly clogs with chunks of inverse video, displaying headers and footnotes verbatim at your cursor location. This makes it hard to read and edit text, and it's easy to pollute your layout with accidental additions or deletions.

The program's various formatting techniques are poorly integrated. After inserting a new ruler line to change formats, you then must cursor through it to specify margins or tabs. More precise settings can be chosen

from a menu, but the changes aren't reflected on the ruler line or editing screen. And while *Sprint* provides some document-wide formatting, it lacks some key settings. If you want to justify or double-space your file, for example, you must repeat the command under each ruler line. You can also create tagged style sheets, but they require a firm grasp of the programming language; you can't create styles by example or via menus.

Sprint's many formatting options include page-break controls, snaking columns, and long-document features, but they're hard to use. Importing graphics requires Encapsulated PostScript (EPS) files, and you must embed PostScript commands to manipulate them. The print formatter supports numerous output devices, but it lacks both batch and background printing.

FEATURES EVALUATION

Sprint 1.0: Full-Featured but Awkward

Sprint's high-end features are attractive, but they aren't always easy to use.

³ Graphics can be imported at time of printing, but not viewed or manipulated.

⁴ Automatically sizes graphics, but scaling, cropping, and rotating require PostScript commands.

⁵ With included PageView utility.

Although a few opening-day jitters are to be expected in any initial release, *Sprint* proved unusually troublesome. Among other problems, screen refresh was unreliable, text occasionally overprinted, and margins often disappeared. File conversions sporadically failed to work, and when they did, tended to produce irrelevant ruler lines. Even if the bugs are squashed, *Sprint's* awkward formatting interface may limit its appeal to budget-minded users who produce unadorned text. —Eric Brown

WHERE TO BUY

Sprint 1.0

Borland Int'l
1800 Green Hills Rd.
Scotts Valley, CA 95066
408/438-8400

List price: \$199.95, six-user Network Pack \$595

Requirements: 384K, DOS 2.00 or later version

Not copy protected

Technical support: unlimited, no toll-free number, M-F 8-5

Other support services: Compu-Serve forum (GO BORLAND), message service on MCI Mail

VP-Planner Plus 2.0

Multidimensional spreadsheet

PROS: Very fast, imports ASCII data base files, inexpensive

CONS: Doesn't support extended memory

This spring, we ran a glowing review of Paperback Software's *VP-Planner Plus 1.0* and dubbed it a Best Buy (see *The Software Shelf*, PCW, May 1988). However, due to an editing error, we mistakenly headlined our review version 2.0. So when the new \$249 version came out, we sent it to NSTL for testing using our upgraded benchmarks (see the sidebar "New Spreadsheet Tests—A Better Method"). The results are pretty impressive. Where version 1.0 consistently trailed 1-2-3, version 2.0 gives it a run for the money.

HOW TO CREATE A RECORD-LOCKED, PASSWORD PROTECTED, MULTI-USER DATABASE IN FIVE MINUTES FLAT. FROM SCRATCH.

How's this for easy. Type a paper business form (or scratched out directions for one) into Q&A. Then, press a single function key and voilà. You've created a database from scratch. Copy it onto your local area network* and now everyone can search, sort, and simultaneously share it. Instantly. Easily. And safely (with up to five levels of password protection). Think of the possibilities: using a single customer database, one person is updating while another enters new information, while a third

person runs a report. Or, forty people want to work on the expense database. All at once. Impossible?

No. Easy? Yes. But find out for yourself. Call now for a free demo disk of Q&A, the world's first networked file manager.

On networks or stand-alone, when you can make it from scratch, you can really cook.

FREE Demo Disk, Call (800)228-4122 Ext. 430W.

This multi-user database was created (from the napkin) in under two minutes. More elaborate databases with sophisticated programming and multi-file linking, and reporting can also be created easily.

The #1 File Manager and #1 Word Processor.

SYMANTEC™

*Q&A 3.0 single user \$349 (supports full record-locking of databases shared on a LAN). Optional Q&A Network Pack (\$299 when added to Q&A 3.0 on a LAN) allows three additional users to simultaneously operate Q&A. Add additional Q&A Network Packs for more simultaneous users. Q&A, Software Digest's #1 file manager 86,88; InfoWorld's highest rating ever given (9.6) 87; PC Magazine Editor's Choice 87,88. See coupon in Q&A package for complete details.

Today's managers
are expected to learn
word processing
in their spare time.

NEW VERSION 2.0

Fortunately, that's all it takes.

Can Professional Write significantly reduce the time and cost of your training and support? Call 1-408-848-4391, Operator #60 for a free trial disk.

Truth is, the best business people have the least spare time. So Professional Write 2.0 was designed to get them up and running immediately.

Professional Write 2.0 has all the features managers demand, and saves them the frustration of learning programs designed for full-time typists.

Our learning process speeds up the word process.

Anyone can learn Professional Write in a couple of hours. The screen is as familiar as a piece of paper. Pull down menus and an on-line manual means there's nothing to memorize. Our follow-along tutorial is written in plain English, and our context-sensitive help is one of the best available.

It all ensures that your managers spend their time managing, instead of asking for help.

We're the most compatible with your secretaries.

We gave Professional Write the most extensive and direct connections with the other software standards in your office. No other program does it so easily. Professional Write has built-in compatibility with MultiMate™, WordPerfect™, Microsoft Word™, WordStar™, Wang™ PC, DCA, and ASCII. You can directly import Lotus 1-2-3™ worksheets without retyping; include a chart from Harvard Graphics when printing; and mail merge quickly with dBase III™ files.

We give your printers the perfect set-up.

Now using multiple fonts with an HP Laser Jet™, Apple LaserWriter™, PostScript™ or HP DeskJet™ is as simple as underlining. And printer support has never been easier, because Professional Write is pre-configured for quick installation.

We have a fast new way to find your documents.

You no longer have to spend your valuable time hunting down files. Our new *File-Finder* searches through the actual text of *all* your Professional Write files to find any words or phrase, and will call up the appropriate document. We'll also give you sorted lists of files, and the option to identify your files with summary descriptions.

There's more to our feature story.

We know what managers need from a word processor. That's why Professional Write offers speed keys, macros, and column-move. An integrated spelling checker,

We're quick to polish up your image.

thesaurus, on-screen calculator and address book are only a key-stroke away. We also support all the popular networks.

NSTL TEST REPORT

Sprint 1.0: True to its Name

In most speed tests with other word processors, Sprint keeps up with the best of them.

Scroll by line

Reformat document

¹ This test measures the time required to issue the reformatting command and move to the end of the document. This command sequence compensates for WordPerfect's background reformatting.

All benchmarks were performed on an 8-MHz IBM AT with 640K of RAM and a 30MB hard disk running under DOS 3.20. All tests except the spelling check used an 8-page (480-line) text file consisting of groups of 4 characters separated by spaces (e.g., aaaa bbbb cccc). The file was formatted at 60 lines per page with margins set at 1 and 60. Two carriage returns followed every 9 lines of text. This pattern was repeated throughout the document. Times were measured from the keystroke initiating the test until control was returned to the user.

Print a file

Global search and replace

Scroll by line

This test measured the time required to scroll line by line from the top of the file to the end and then from the end back to the top. The two times were then averaged. The size of the keyboard buffer was increased with a utility program to allow 30-keystrokes-per-second input without filling the buffer. Without such a utility, times would have been greater.

Reformat document

The times to reformat the document after changing the right margin from 60 to 50, and then from 50 to 60, were averaged for each program.

Print a file

This benchmark used a device that simulates an infinitely fast printer, one not slowed by paper or

Spelling check

printhead movement. The text file was "printed" to the device at the maximum speed supported by the program. Times with an actual printer would be greater.

Global search and replace

With the cursor positioned at the beginning of the text file, the program was instructed to automatically replace all 240 instances of aaaa with AAAA.

Spelling check

This benchmark recorded the time a program's spelling checker required to proof a 28,051-character ASCII file (thirty 14-line paragraphs) after the file had been read into each program and saved in that program's format.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

VP-Planner Plus 2.0's speed is due mainly to the pairing of background with what Paperback calls *priority* recalculation. The first is pretty straightforward: The spreadsheet recalculates in the background while you continue to enter data and issue commands in the worksheet. Priority recalc is more intriguing: The program first recalculates the result of a command and whatever cells its operation depends on. (For example, if you choose a graph view and press <F10> to display it, *VP-Planner Plus 2.0* immediately recalculates the cells used for the graph ranges.) Next it recalculates all on-screen cells, and finally the rest of the worksheet. The effect? Users get recalc results

when they need them and also quickly regain keyboard control.

Version 2.0's other improvements are welcome. It has gained an undo command, which reverses the effects of most previous operations—including accidentally erasing the entire worksheet. You can undo an undo, and even use undo to repeat macros, but the undo command itself can't be included in a macro; nor does it work with any operation that saves data to disk. Macro maniacs will love version 2.0's macro transcriber. It records keystrokes, stores them in a 240-byte buffer, then flushes them to a .PRN file. You can create up to ten Autokey macros (one *continues*)

How we made the most powerful integrated software a whole lot easier to use.

Yes. There are ways to take something that's very powerful and make it easier to use.

Actually, with Symphony® 2.0, not only is this latest version of the world's most popular integrated program easier to use, but it's also more powerful than ever. So it can keep up with you as your capabilities grow.

For starters, since there's no copy protection, you can get Symphony up and running with much quicker and easier installation.

Once up and running, bingo, you have instant access to five key business functions: spreadsheet, word processing, database, graphics and communications. So you can prepare budgets, write memos, create inventory lists without having to go through the hassle of changing programs.

But Symphony is really more than five separate programs. Because, unlike other integrated packages, Symphony lets you dynamically integrate functions. For example, when you change spreadsheet data, your graph of that data and your memo containing the same

numbers automatically reflect the changes. So you get greater efficiency, and you're able to work faster too.

Plus, the Symphony spreadsheet is the fastest and most powerful spreadsheet available in integrated software, based on Lotus® 1-2-3®, the industry-standard spreadsheet technology.

We could go on about the many features of Symphony 2.0—how its macros let you automate complex or repetitive tasks and create customized applications. How the word processor now has a spelling checker and text outline. And how database and communications have been improved.

The bottom line is that Symphony is one high performance package that's made to be opened up.

Lotus Symphony 2.0

NEW SPREADSHEET TESTS—A BETTER METHOD

Starting with this issue, *PC World* deploys an all-new suite of spreadsheet benchmarks. These tests were designed by National Software Testing Laboratories (NSTL), an independent test center in Philadelphia, to provide a more accurate picture of how well a spreadsheet will perform once it's installed in your working environment.

In support of our real-world benchmarking philosophy, the new test worksheet is a typical three-year business plan. With this worksheet as the guinea pig,

NSTL tests spreadsheets in four critical areas: file-loading speed, data-editing speed, recalculation speed, and capacity.

BOTTOM-LINE RESULTS

The results are sometimes unexpected. For example, in our file-loading test of four popular spreadsheets—1-2-3, Excel, Quattro, and VP-Planner Plus—VP-Planner Plus bested all the others (although 1-2-3 and

(continues)

NSTL TEST REPORT

VP-Planner Plus 2.0: Faster Than Ever

Version 2.0 of VP-Planner Plus pulls ahead of 1-2-3 in two out of three speed tests.

Conventional memory

Load a worksheet

Recalculate

Benchmarks were performed on a 12-MHz Compaq Deskpro 286 with 640K of RAM and a 40MB hard disk; all tests were repeated using an Intel AboveBoard with 2.5MB of EMS4.0 memory and with an 80287 coprocessor installed. The conventional memory tests were performed on a worksheet containing a three-year business plan. For the expanded memory tests, the business plan was expanded to include data for eight years. For all speed tests, time was measured until control was returned to the user.

Load a worksheet

This test measured how long it took to load the test worksheet.

Recalculate

This test measured how long it took the spreadsheet to recalculate after a new value was entered into cell B18 (Sales).

Insert, copy, and delete columns

Capacity

Insert, copy, and delete columns

This test measured the time required to insert blank columns (P1..AD195), copy other columns into the new columns (AE1..AR195 to P1..AD195), and then delete the copied columns. Each step was timed separately; then the times were added.

Capacity

This test measured worksheet capacity by counting how many additional years' worth of data could be added to the worksheet. If an entire year could not be added, an attempt was made to add six months.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

We Put Accounting in Its Place Home & Office

At Home. A Great Place for Dac-Easy Light.™ Take the simplicity of Dac-Easy Light home and you'll be amazed at how fast you can perform your personal financial tasks. Dac-Easy Light is designed for the non-accountant, yet it gives you complete information that makes your home accounting fun. Quick to install, Light provides a Personal Chart of Accounts setting up an accounting structure for immediate data input. And there's room to modify! You can set up as you go — whether you begin writing checks or posting credit card expenses, transparent to you. For example, the bank feature allows you to select one of your bank or savings accounts. Then, a pull-down check screen recognizes format lets you indicate manual or computer check entry, and you can print computer checks one at a time or by batch. End-of-month statements are easily reconciled with Light. This feature has an on-line adjustment for withdrawals, deposits and service charges. For better credit management, Light automatically updates current card balances by you post receipts. You'll really see how much your actual expenditures are by month and year-to-date versus budget. Personal net worth reports are readily available, too. Light includes other features like pop-up calculator and user-defined color selections. Dac-Easy Light. A perfect place in your home for personal use.

\$69.95

protection, pop-up calculator that pastes results to screen, and user-defined color selection. Dac-Easy Light. An accounting system ideal for the sole proprietor.

Your Sole Proprietorship. A Great Place for Dac-Easy Light.™ The professionalism of your company is best portrayed to your customers with Dac-Easy Light invoices, statements and checkwriting features. And you'll spend less time performing necessary office accounting while retaining more accurate and current information — on screen! With the non-accountant in mind, Dac-Easy Light quickly installs a predefined Business Chart of Accounts that allows you to start immediately invoicing customers or writing accounts payable checks. There's always room to modify, too! Dac-Easy Light performs as an integrated General Ledger, Accounts Receivable and Accounts Payable system. Light's checkwriting feature allows you to print computer checks one at a time or by batch. Post manual checks while a pop-up window debits and credits accounts by category. Your customers will be impressed with the detail shown in Light's invoice feature, and they'll never know how simple it was! Light gives you more reports to make the decision-making process easier, whether it's a Balance Sheet, Income Statement, Customer Statement or Variance Report, all data is up-to-date. The 12-Month Budget feature is extremely useful for the bottom line actual expenditures versus budget. Other handy features include mailing labels, password protection, pop-up calculator that pastes results to screen, and user-defined color selection. Dac-Easy Light. An accounting system ideal for the sole proprietor.

NEW SPREADSHEET TESTS

(continued)

Quattro were just seconds behind). File-loading tests in expanded memory told quite a different story: *Quattro*, for instance, slipped to last place.

To evaluate performance on a set of common editing tasks—inserting, copying, and deleting data—NSTL benchmarked how long each spreadsheet took to perform these operations on a group of columns. *Quattro* and *1-2-3* were neck and neck on this one, with *VP-Planner Plus* twice as slow and *Excel* almost four times as slow. In expanded memory tests *Quattro* outperformed *1-2-3*, while *Excel* continued to lag far behind. (*VP-Planner Plus* doesn't support expanded memory.)

SUMMING UP

In NSTL's new recalculation test, a key Sales cell is changed in the business plan worksheet; then the worksheet is recalculated. Because all tests are timed until cursor control is returned to the user, *Excel* and *VP-Planner Plus*, which support background recalculation, whipped the others on this test.

1-2-3 and *Quattro* were also fast, with speeds of less than 2 seconds. But in ex-

panded memory, *Excel* was by far the fastest; *1-2-3* and *Quattro* once again were almost tied.

EVALUATING MEMORY USE

As worksheets grow, memory management becomes a key issue. In the capacity test, NSTL measured how many years of data could be added to the business plan. In conventional memory *1-2-3* did better than all the others, allowing 9.5 business years to be added; *VP-Planner Plus* came in second at 8 years. In expanded memory *Excel* performed far better than the others, with 71.5 years.

Our conclusions? If you have expanded memory, *Excel* is best for huge worksheets with heavy-duty recalculation requirements. *Quattro* is fast at data editing tasks but falls down in conventional memory capacity. *VP-Planner Plus 2.0* significantly surpasses version 1.0 in file loading and recalculation tests. Finally, *1-2-3* remains a strong overall performer. Of course, benchmarks are only one part of the story; for some users, power and ease of use may rival mere speed. —Anita Amirrezvani

Sprint's menus are well designed, but a little format clutter the editing screen with inverse video. Even worse, headers and footnotes are inserted at the cursor location.

per function key) for each .PRN file, and tie traditional label macros to them. Finally, *VP-Planner Plus*'s excellent multidimensional data base now reads ASCII data base files, provided they contain standard fields—either label, record, numeric, value, time, date, or skip column.

VP-Planner Plus still doesn't support extended memory. Since the program requires 384K RAM, this can limit the size of your worksheets, unless you use the program's multidimensional data base, which is limited in size only by free disk space.

Considering *VP-Planner Plus*'s reasonable price, speed, and excellent multidimensional data base, we're awarding it our Best Buy tag for the second time. —Alan Southerton

PFS: First Publisher 2.0

Low-end desktop publishing program

PROS: Fast, easy page layout for short documents; good laser printer and Hewlett-Packard DeskJet support; inexpensive

CONS: Inadequate for long documents, lacks style sheets, unimpressive dot matrix output

When *PFS: First Publisher* came out, it impressed us as a fast, easy-to-learn package, ideal for generating short documents such as booklets and newsletters (see *The Software Shelf*, PCW, December 1987). Costing just \$99, Software Publishing's package boasted an accessible user interface and excellent design. However, *First Publisher 1.0* lacked full printer support and such long-document amenities as style sheets, multiple-page text flow, and running headers.

First Publisher 2.0 is faster, has better text import and laser support, and includes context-sensitive help and a number of helpful templates. Its price has also risen to \$129.

First Publisher's layout tools haven't changed, but then they didn't need to. They're wonderfully easy to learn and use, whether you drive the program with pull-down menus or speed keys. To help lay out a document with varying numbers of columns, version 2.0 includes five templates for the most common multiple-column formats. Software Publishing also supplies templates for newsletters, invoices, flyers, lists, stationery, business cards, menus, and greeting cards. But the program still lacks style sheets.

First Publisher imports images from scanners that can be set to 72 dots per inch (dpi), so long as they're stored in a format the program can read: *PC PaintPlus*, *PC Paintbrush*, *Windows Paint*, *Logipaint*, *Publisher's Paintbrush*, or .MAC format files. Images can now be rotated in 90-degree increments, inverted, resized, and flipped. Version 2.0 ships with 150 clip-art images and a selection of 60 fonts, with more available in 2 font and 7 clip-art portfolios for \$39 each.

First Publisher 2.0 supports the DeskJet (though not its soft fonts) and all Hewlett-Packard and Bitstream soft fonts. This is a

Can your lightweight database handle a heavyweight challenge?

When you have a job that's too much for dBASE or Paradox, turn to the real heavyweight. PC/FOCUS.

PC/FOCUS is the number one fourth-generation language, with its own powerful database system. It's complete enough to create the complex reports and applications that others can't—without resorting to hard-to-learn procedural languages.

With the PC/FOCUS window painter, you can do highly customized, menu-driven applications, with help screens and overlaid windows.

Using just a few words in the PC/FOCUS 4GL, you can put together highly structured matrix reports that include imbedded data, row and column totals, and customized headings. You can create any standard financial report in your preferred format.

And you can draw on as many as 16 different files for one report.

With the powerful PC/FOCUS shared-relational database system, you can report at a level of detail that would otherwise require a large computer. PC/FOCUS can scan 50,000 records in less than three seconds.

And you can access this power through a choice of user

interfaces. A command mode lets the experienced user develop major applications quickly. A point-and-pick windowed interface lets the casual user make a query—or build a substantial application—using only the arrow keys and the enter key.

What's more, any application you develop in the FOCUS language can immediately be run on any of the larger computers supported by FOCUS.

PC/FOCUS includes modules for graphics, statistics, and communications. And there are optional modules including EQL—an English language interface, spreadsheets with goal-seeking capabilities, and interfaces to dBASE and other PC database systems.

There's also a MultiUser version of PC/FOCUS that works with the major LAN products. In a network, up to 32 users can access one database simultaneously without record lockup. While PC/FOCUS maintains your data integrity.

If you've got a heavyweight job to do, get some real muscle from PC/FOCUS. Call 1-212-736-4433, Ext. 3700. Or write Information Builders, Inc., 1250 Broadway, New York, N.Y. 10001.

When in doubt, just so

Introducing Xerox Ven

For the last two years, Xerox Ventura Publisher has been the best selling, best reviewed desktop publishing software for MS-DOS systems. But now we've made it even easier. And more versatile.

To begin with, we developed a new, simplified user interface. And we added 250 help screens that cover every subject from

getting started to character kerning.

Just as importantly, Release 2.0 has 70 new features that give you more control than ever. It supports more typestyles and printers. It even gives you grey scaling, full color, and the ability to produce color separations on compatible printers.

We're also introducing a Professional Extension package that includes the features needed most by scientific, engineering and technical publishing users. And there's a Network Server version that lets 3Com, Novell, and PC NET users enjoy the power of Xerox Ventura Publisher. And the productivity of local area networks.

Screen for help.

Ventura Publisher 2.0.

and since we're leaders in document processing, we offer short courses on the basics of page design and layout, as well as advanced applications courses. All available through a nationwide network of training centers.

If you'd like to know more, call 1-800-TEAM-XRX (832-6979), ext. 119E. We'll send you full

information on Xerox Ventura Publisher 2.0, and the name of your nearest dealer. Then you'll see how much you can really do with desktop publishing. Now that you have all this help behind you.

Team Xerox.
We document the world.

big improvement over the anemic catalog of HP fonts in version 1.0. However, the program's dot matrix output is still poor, and dot matrix users will be better served by the first-rate fonts of Digital Research's *GEM Desktop Publisher*. In response to customer demand, Software Publishing has also added a driver for the Star Gemini 10X printer.

The package's overall speed, which was satisfactory in version 1.0, has been noticeably enhanced. Tests showed a 150 to 300 percent speed gain in such tasks as jumping to the second page in a two-page ASCII file and placing a graphic in the corner of a page with text wraparound.

For a small business with a laser printer, *First Publisher* is an attractive, inexpensive way to produce occasional short-document layouts. If your work runs to double-digit pages or you're tied to dot matrix output, you'll need to consider a beefier (and more expensive) program. —George Beinhorn

GrandView 1.0

Personal information manager

PROS: Powerful outline and project-planning functions, excellent mouse support

CONS: Weak word processor, limited outline size

Personal information managers are supposed to bring order to your personal chaos,

THE FINANCIAL POWER YOU NEED TO SUCCEED ...MADE SIMPLE.

Andrew Tobias' Managing Your Money gives you the tools you need to make better financial decisions. And it's surprisingly easy to learn and use.

Now over a quarter of a million users rely on Managing Your Money for mastery over their personal or business finances.

Managing Your Money gets you organized. It keeps you on track. It helps you make the hard decisions with complete knowledge and a new sense of confidence. What's more, Managing Your Money saves bookkeeping time and earns you the extra dollars that come with better financial management.

But perhaps best of all, Managing Your Money is written by Andrew Tobias in a straight-forward, easy-to-understand style that demystifies finance. You don't have to be a business school graduate or a computer wiz to use and enjoy the financial power of Managing Your Money—you probably won't even need the manual.

"Considered by computer industry experts to be one of the best all-around programs ever written, it's easy to use even if you're a novice at computer technology and personal finance."

New York Daily News, "Money Talks,"
October 4, 1987

- Sets up budget and monitors cash flow.
- Automates payment of routine bills.
- Writes, prints, and records checks and invoices by tax category.
- Manages accounts payable and receivable (with aging).
- Tax planning section reflects up-to-date tax laws.
- Life insurance: How much you need and what to expect to pay for it.
- Financial Calculator covers mortgage, retirement, college planning, rental property analysis, and more.
- Prints loan amortization schedules.
- Portfolio Manager records and analyzes your investments.
- Net Worth Calculator compiles your personal or business balance sheet.
- Built-in word processor and home banking feature.*

Category assignments can be attached to each item in a *GrandView* outline, and you can create as many categories as you like, from completion dates to persons responsible for tasks.

and Symantec's *GrandView* is no exception. Designed to track sales reports, project plans, schedules, notes, and correspondence, the program grafts an indifferent word processor and a clever project-tracking feature onto what must be the most powerful outliner on the market. *GrandView* can't cross-reference data as elegantly as *Agenda*, but if you're neat by nature, it can help you keep on top of things.

Like Symantec's other outliner, *ThinkTank*, *GrandView* lets you make dynamic copies of headers: Change one and the clone changes as well. You can also expand and collapse subheads, zoom to a portion of an outline, sort and gather subheads, and so forth. But *GrandView* adds a lot more.

Mouse support makes manipulating headings a breeze. You can open up to nine outlines at once, view multiple outlines on screen, and easily switch between them. (A clipboard lets you move both headings and text.) Finally, the program offers a wide variety of preset outline modes.

But *GrandView*'s strength as a project planner stems from its Category function, which lets you instantly reorganize outlines according to criteria you define. This is where careful planning pays off. Say you're outlining the tasks involved in a major advertising campaign. As you enter items, you may assign each one a priority level, a completion date, a person responsible, and so on. Turn to the Category view, and you'll see a

group of boxes showing the categories you've created and the entries under each one.

Highlight the Person Responsible category, for example, and *GrandView* will display all the people you've assigned work to. Pick a name and any outline tasks assigned to that person will appear.

GrandView comes with a word processor and a 100,000-word spelling checker, but it's not going to wean anybody from *WordPerfect*. Function keys are unavailable for basic editing chores (they're reserved for outline use), and you'll search in vain for such features as a macro glossary, a ruler, a column mode, or windows. To get these, you're stuck using another word processor and copying the results in ASCII format to your outline.

GrandView offers excellent printer support, and it's easy to specify fonts for different levels of the outline. The program accepts *ThinkTank* and *Ready* files automatically and can convert files from *PC-Outline*. Unfortunately, *GrandView* outlines are limited by available RAM, and the program doesn't make use of expanded memory.

GrandView is a top-notch outliner, and its Category view is dandy for sorting anything from deadlines to people in charge of tasks. The program's word processor still needs major improvement, but *GrandView* will suit anyone whose management needs run to bulleted lists and extensive supporting references. —Patrick Marshall

Get your work done before 1991²

The future of personal computing is clear. More powerful PCs. Easier to use PCs. With graphics and character-based programs working side by side. Talking to each other. Multitasking. Windowing. Menuing. Mousing. Getting your work done easier and faster.

Have it all now.

DESQview™ is the operating environment that gives DOS the capabilities of OS/2.™ And it lets you, with your trusty 8088, 8086, 80286, or 80386 PC, leap to the productivity of the next generation. For not much money. And without throwing out your favorite software.

Add DESQview to your PC and it quickly finds your programs and lists them on menus. So you can just point to the program, using keyboard or mouse, to start it up. DESQview knows where that program lives. And what command loads it.

For those who have trouble remembering DOS commands, it adds menus to DOS. It even lets you sort your files and mark specific files to be copied, backed-up, or deleted—all without having to leave the program you're in.

Best of all, DESQview accomplishes all this with a substantial speed advantage over any alternative environment.

Multitask beyond 640K.

When you want to use several programs

DESQVIEW SYSTEM REQUIREMENTS:
IBM Personal Computer and 100% compatibles (with 8086, 8088, 80286, or 80386 processors) with monochrome or color display; IBM Personal System/2 • Memory: 640K recommended; for DESQview itself 0-145K • Expanded Memory (Optional): expanded memory boards compatible with the Intel AboveBoard; enhanced expanded memory boards compatible with the AST RAMpage; EMS 4.0 expanded memory boards • Disk: two diskette drives or one diskette drive and a hard disk • Graphics Card (Optional): Hercules, IBM Color/Graphics (CGA), IBM Enhanced Graphics (EGA), IBM Personal System/2 Advanced Graphics (VGA) • Mouse (Optional): Mouse Systems, Microsoft and compatibles • Modem for Auto-Dialer (Optional): Hayes or compatible • Operating System: PC-DOS 2.0-3.3; MS-DOS 2.0-3.2 • Software: Most PC-DOS and MS-DOS application programs; programs specific to Microsoft Windows 1.03-2.03, GEM 1.1-3.0, IBM TopView 1.1 • Media: DESQview 2.0 is available on either 5-1/4" or 3-1/2" floppy diskette.

For programmers, DESQview's API, with its strengths in inter-task communications and multitasking, brings a quick and easy way to adapt to the future. With the API's mailboxes and shared programs, programmers are able to design programs running on DOS with capabilities like those of OS/2.

together, you don't have to leave your current program. Just open the next program. View your programs in windows or full screen. Open more programs than you have memory for. And multitask them. In 640K. Or if you own a special EMS 4.0 or EEMS memory board, or a 386 PC, DESQview lets you break through the DOS 640K barrier for multitasking. You can start 1-2-3 calculating and tell Paradox to print mailing labels while you're writing a report in Word Perfect, or laying out a newsletter in Ventura Publisher, or designing a building in AutoCAD.

DESQview even lets you transfer text, numbers, and fields of information between programs.

Fulfill the 386 promise.

For 80836 PC users, DESQview becomes a 386 control program when used in conjunction with Quarterdeck's Expanded Memory Manager (QEMM)-386—giving faster multitasking as well as virtual windowing support.

And when you use DESQview on an IBM PS/2™ Model 50 or 60 with QEMM-50/60 and the IBM Memory Expansion Option, DESQview gives you multitasking beyond 640K.

Experts are voting for DESQview. And over a million users, too.

If all of this sounds like promises you've been hearing for future systems, then you can understand why over a million users have chosen DESQview. And why PC

Magazine gave DESQview its Editor's Choice Award for "The Best Alternative to OS/2," why readers of *InfoWorld* twice voted DESQview "Product of the Year" why, by popular vote at Comdex

Fall for the last two years in a row, DESQview was selected as "Best PC Environment" in *PC Tech Journal's* Systems Builder Contest.

DESQview lets you have it all now.

YES!
I need increased productivity now!

In this mechanical detail drawing, EasyCAD 2's menu headings at the top of the screen can be changed to suit the user, and new headings can be added as required.

EasyCAD 2 2.05

2-D design and drafting program

PROS: Fast, powerful, flexible, easy to learn, inexpensive

CONS: Lacks nested zooms, some cross-hatching limitations

With *EasyCAD 2* version 2.05, Evolution Computing has not only revolutionized the low-end CAD market, it bids fair to threaten the high. The easy-to-learn program is blindly fast, and its flexibility, wealth of features, and excellent user interface match those of professional programs costing thousands of dollars more. With *EasyCAD 2* you can easily handle 8000 entity files in 640K of base memory, and you can use floppy-based systems just as effectively as hard disk systems for drawing and editing. However, the program lacks a nested zoom facility, which lets you zoom in and out while drawing.

EasyCAD 2 supports an array of digitizers, pen plotters, laser and dot matrix printers, and ultra-high-resolution graphics boards. A DOS shell is included, as are file translation utilities for *Ventura Publisher* and *PageMaker*. Unlike Foresight Resources' competing *Drafix*, *EasyCAD 2* lets you modify its menus with any ASCII text editor.

Because *EasyCAD 2* uses pulldown menus, practically the entire screen is open for drawing. When you need to change colors, a set of 16 color icons along the left edge lets you switch instantly, even while placing

a line or arc. A prompt line along the bottom of the screen echoes your commands and indicates the next input required. It also provides cursor feedback in either absolute, relative, or relative polar coordinates.

EasyCAD 2 provides a complete set of basic construction elements. Its 24 standard fill (hatch) patterns work with a variety of figures, whether bounded or not. Hatch patterns automatically match up whenever two hatched areas abut or overlap, and expand if the hatched entities are stretched or scaled. *EasyCAD 2* can't build hatched areas out of simple lines and arcs, however.

In addition to the usual rectangular grids and snaps, the program offers an extensive set of object snaps (command modifiers) that let you pick off endpoints, centers, midpoints, intersections, angles on arcs and circles, and corners of polygons as needed.

The program's basic editing command set is quite complete, and its selection of Boolean options for choosing items to edit is outstanding. You can select items individually, by color, by layer, by window (box), or by item type, or simply reselect the last item worked on. Then you go on to chain or deduct these selection criteria indefinitely. Need to move all but two of the red polygons on layer #225? No sweat. You can always see exactly what items you've chosen, because once selected, they change to a preset color.

Nor does *EasyCAD 2* skimp on dimensioning and text handling. All standard dimension types are associative, which means that the dimension text and witness lines change automatically to match geometry whenever a dimensioned entity is stretched or scaled—a tremendously useful, timesaving feature. Formats include vertical, horizontal, parallel, and angular dimensions, and the standard formats can be augmented with the program's macro language. You can edit text without erasing it, place it at any size or angle in several standard fonts, dynamically drag it into place, and even scale it on the fly.

Finally, *EasyCAD 2* is quick. When loading files, regenerating circles and diagonals, and zooming in to a single line or letter, for example, *EasyCAD 2* was over ten times faster in our tests than *AutoCAD 9.0*.

For 2-D design and drafting, *EasyCAD 2* is very nearly the equal of such high-end

R&R

Worksheet Report Writer™

Create presentation-quality reports in any layout, quickly, directly from Lotus® database worksheets.

R&R handles the tedious and time-consuming tasks of creating and modifying reports. It is full-featured and flexible, so you can concentrate on making reports show exactly what you want to show, in exactly the way you want to show it. Monthly sales analyses, purchase orders, mailing labels, inventory cost summaries, most active accounts, employee benefit listings, even invoices and form letters.

Place fields and text in any layout. Do complex calculations. Print up to eight levels of subtotals. Report from up to 10 related databases at once. Lotus-like menus make it easy.

Use standard field formats such as currency, commas, and word-wrap, or create your own. Print in underline, bold, italics, and different fonts. R&R has hundreds of features for fast results with Add-in convenience.

Only \$149!
Satisfaction guaranteed.*

To order, or for more information and the name of your nearest dealer, call:

800-325-9035

In Mass., call 508-366-1122.

*If you aren't satisfied for any reason, return R&R within 30 days of purchase for a refund (if purchased directly from Concentric or an Authorized Reseller). R&R works with 1-2-3® and Symphony® on IBM® PCs and compatibles with PC-DOS 2.1 or later and a hard disk. Requires 20 KB of available memory for use as a Lotus Add-in, and 320 KB for stand-alone use. Operates on networks that support the NETBIOS standard. 3.5" media available at extra cost. R&R dBASE® version also available.

HB-Browser

RAM-resident dBASE browser

PROS: Hot-key access to dBASE data from other applications, elegant and intuitive user interface

CONS: Requires a lot of RAM, doesn't support non-dBASE index formats

Ever long to pluck a customer address or invoice number from your *dBASE* files without leaving a spreadsheet or word processor? Meet Cauldron's *HB-Browser*, a slick RAM-resident utility that opens windows into .DBF data files. *Browser* is so easy to use, even *dBASE* novices will love it. But be warned: In its read-only configuration, *Browser* requires a healthy 155K of RAM (in a second configuration that lets you edit the data, it gobbles up 187K). In addition, it doesn't support such non-*dBASE*-compatible index formats as *Clipper* or *Foxbase +*.

Browser's user interface is elegant and logical, with pulldown menus and point-and-shoot file selection. You can open up to ten screen windows into as many as ten *dBASE* files (including multiple windows into the same file) and see the records in the order of any available index. Data appears in a row-and-column format, and the screen scrolls quickly and smoothly. You can execute instant FINDs, search through the data with LOCATE, and SET filter conditions for viewing records by entering a standard *dBASE*-

language logical expression. Beware of filtering out all but a few records in a large file, however; *Browser* is even worse than *dBASE* in spinning your hard disk through the entire file, resulting in infuriating delays.

Browser lets you cut and paste all the data from one record (or everything displayed in a window) directly into a worksheet or word processing document. This is a one-way facility, though; *Browser* can't move worksheet or text data from the screen to a *dBASE* record. If you select *Browser*'s larger configuration, you can change the data in a selected record at will. Just be careful: There's no data validation feature. To speed data retrieval, you can use macros to automatically bring up a preset environment of data files, indexes, and window locations. Field names and structures are also available at a keystroke, a useful reference when creating *dBASE* programs and reports.

The only thing wrong with *Browser* is its appetite for memory. But if you can spare the RAM, you'll soon be spoiled by *Browser*'s instant access to your *dBASE* data. —Alan Schwartz

Just a few
months ago,
computers this powerful
were tracking
planetary movements,
pondering
quantum physics
and building
rockets.

Now they're taking

care of business, too.

Introducing the COMPAQ DESKPRO 386/20e. 20-MHz 386 performance designed to fit the increasingly sophisticated needs of 286 users.

People who work with 386 personal computers used to be called rocket scientists. Now they're also called accountants, engineers, managers and CEO's. Thanks to the new COMPAQ DESKPRO 386/20e.

It delivers 386 power to people whose demanding needs have outgrown the capabilities of their 286 PC's. Better yet, it packs all this power

into a design that fits neatly on your credenza.

Start with speed. Everything in the new COMPAQ

DESKPRO 386/20e is optimized to go faster.

Its 20-MHz Intel 386™ microprocessor with cache memory is surrounded by the exclusive COMPAQ Flexible Advanced Systems (Flex) Architecture. This high-speed combination runs the world's largest library of software 25% faster than non-cache 20-MHz 386-based PC's. And 50% faster than non-cache 16-MHz 386-based PC's.

Its optimized 32-bit design also enables you to take full advantage of powerful 386 software and

multitasking operating systems such as Microsoft® Windows/386, MS® OS/2, XENIX® and UNIX.

You'll find that a long list of high-performance features is built in. One megabyte of memory. Sharp, high-speed VGA graphics. Support for 5¼" and 3½" diskette drives. And standard interfaces to connect a printer, mouse and communications devices.

Of course you have growth potential. Five expansion slots are available: four for a network card, mainframe communications board, modem or other devices, and one high-speed 32-bit slot that allows you to expand memory up to 16 megabytes.

You have options, too. There's room to add two high-speed fixed disk drives, with 110 or 40 megabytes of storage. You can choose a 135- or 40-megabyte tape backup. Or match the number-crunching power of a dedicated engineering workstation by adding a powerful Intel 387™ or Weitek 3167 coprocessor.

With its integrated design and performance, the COMPAQ DESKPRO 386/20e represents the ultimate space vehicle.

High-speed VGA graphics are built in.

You're in business with a 20-MHz 386 microprocessor.

Choose 5¼" and 3½" diskette drives.

Standard interfaces are on board.

COMPAQ

It simply works better.

Compaq makes high performance everybody's business.

Whether you use a personal computer for launching rockets or corporate acquisitions, Compaq delivers the highest-performing solution.

For those who want everything, now, the COMPAQ DESKPRO 386/25 is the most powerful PC available. For growing performance requirements, the new COMPAQ DESKPRO 386/20e is a move into the power structure. And for users considering 286 PC's, the COMPAQ DESKPRO 386s is an affordable route to the fast track.

These PC's are simply the highest-performing in the world. That's one reason PC experts rate COMPAQ highest overall. And why for the past four years COMPAQ has been added by more FORTUNE 1000 corporations than any other brand.

To make this performance part of your business, call 1-800-231-0900, Operator 70. In Canada, 1-800-263-5868, Operator 70. We'll give you the location of your nearest Authorized COMPAQ Computer Dealer and a free brochure.

COMPAQ

It simply works better.

No Matter How It's Protected, Be Sure You Can Back It Up.

Several products can back up protected software. But only two are tough enough to handle even the trickiest protection schemes.

Copy II PC, for just \$39.95, backs up more protected software than any other program. What's more, it can remove copy protection already on your hard disk. *PC Magazine* calls it the "easiest of such programs to use." And now, with our menu-driven Noguard, it's a snap. Copy II PC easily handles Lotus 1-2-3 and over 100 other top-selling programs.

Now removes
Superlok, Everlok and
Prolok copy protections.

For the ultimate solution, try the **Copy II PC Deluxe Option Board**. For just \$159, it gives you the same advanced technology used by commercial disk duplication firms.

PC Magazine reported it "could not find a program this board couldn't handle." It's so powerful, in fact, it even lets you read and write Mac data files in a IBM PS/2 Model 25 or 30, or a PC or AT with a 3.5" internal drive.

No matter how it's protected, be sure you can back it up. For the dealer nearest you, or to order direct, call (503) 690-8090, M-F, 8 a.m. to 5 p.m. (West Coast time).

BEYOND E-MAIL: THE GROUPWARE POTENTIAL

PC NETWORKS HAVE
HOUSED ONLY TRADI-
TIONAL APPLICATIONS
SO FAR, BUT "GROUP
PRODUCTIVITY" PACK-
AGES PROMISE TO PULL
NEW TYPES OF OFFICE
FUNCTIONS ON THE NET.

ERIC BENDER

As hundreds of thousands of PCs link up on local area networks, almost every package that can live on a net gets promoted as "group productivity" software. There's a reason for the hype—even rudimentary information sharing can provide significant benefits for work groups—and the reason will become clearer with the arrival of packages that build on net strengths in novel ways.

So far, most net packages are repeating patterns of evolution already well known on minicomputers and bigger machines. Upcoming data base management systems offer prime examples: Building on OS/2, they're moving upscale to become full multi-user relational systems, supporting various degrees of transaction processing with robust recovery schemes. Similarly, word processing packages are incorporating multiuser annotation and merge functions, along with capabilities for tracking and cataloging revisions, thus moving into what vendors of traditional office automation call document processing (see "The Work-Group Ethic," *PC World*, October 1987).

Electronic mail, an addictive office automation staple that makes telephone tag obsolete, is appearing in mainstream applications like Ashton-Tate's *Framework* and Tandy's *Professional DeskMate*. And everyone from tiny start-ups to major players like WordPerfect are selling packages that supplement E-mail with scheduling, calendaring, and other goodies.

Slowly and painfully, the industry is creating relatively compatible and very powerful OS/2 network system platforms that will gracefully handle jobs in situations where DOS would flame out. As those platforms arrive and network hardware costs drop, the distributed power, flexibility, and graphics strengths of PC nets will recast office automation for the nineties.

We're already seeing the first pioneers: innovative applications with new weapons to attack business problems. According to Eric Sall, product director for Lotus's upcoming *Notes*,

some of these packages will give users "more dynamic, subjective, and opinionated ways for information to be brought into the process." Other software will help users cooperate on many tasks now mired in manual mode. None of these products have hit store shelves yet, but they're coming.

RESTRUCTURING E-MAIL

Electronic mail is as popular this year as jokes about presidential candidates. Customers are most anxious to find ways to link multiple E-mail systems. Vendors, though, are also quietly producing net applications that combine E-mail with other functions built atop data bases.

Higgins, a veteran package from Conetic Systems in San Leandro, California, includes scheduling, to-do list, phone messaging, and expense reporting modules. Miami-based Data Access's *Office Works* pushes calendaring, filing, phone messaging, and document control features. *WordPerfect Office for PC Networks* from WordPerfect in Orem, Utah, offers an application shell along with notebook, scheduling, and desktop accessory features. Likewise, Chronos Software of San Francisco has created a multi-user version of its *Who/What/When Office* package that performs project, time, and personnel management.

Electronic sharing of the familiar pocket personal organizer is a common theme. "People understand that concept," says Camilo Wilson, chairman of Lifetree Software in Monterey, California. Lifetree's *Net Results* is a memory-resident net package that tightly integrates E-mail, scheduling/calendaring, and work-flow management functions. Unlike plain vanilla E-mail, says Wilson, *Net Results* "lets you build as much structure as you want." Like its competitors, *Net Results* gives you a choice of responses with certain messages; the scheduler, for example, lets you accept or decline a meeting.

JAVIER ROMERO

Voice annotation, another service that can tag along with E-mail, comes with Forum Systems' *PC/Forum*. The Santa Barbara, California, firm has been working on offbeat office

group—that's ten people who are always at their desks, don't travel, work the same hours, act as an autonomous isolated group, have no matrix structure with other groups in the larger

tion). The commercial product, due next year, will require OS/2 with the Presentation Manager. Lotus is also expected to crank up a *Windows* front end for DOS users.

Left: Lifetree's Net Results aids scheduling. Right: Coordination Technology's DOS prototype exploits "work centers."

software throughout the decade—first, with executive information systems; now, with a network package that runs under Hewlett-Packard's *NewWave* and delivers an integrated portfolio of basic office facilities.

CONFERENCE CALLS

With a few added hooks for swapping messages among multiple users, E-mail can be incorporated into bulletin boards for informal electronic publishing. Computer conferencing goes two steps further. "You need to support chains of discussion, with facilities to navigate through the chains," says Gil Kirkpatrick, vice president for product development at Trellis Group in Hopkinton, Massachusetts. "You also want to be able to do global searching."

Like many of its peers, Trellis's *TimeTalk* calendaring and scheduling application is evolving in that direction. *Cross/Point* from Cross Information in Boulder, Colorado, has already arrived. But Lotus's *Notes* is the package most people will watch.

Notes is designed for sharing information flexibly among work groups—running ongoing discussion/action groups and letting users tune in at convenient times. Lotus chairman Jim Manzi says the package targets those who *don't* enjoy "a perfect work

enterprise, and have a manager whose door is always open. Relax any of these constraints, and you need something like *Notes*."

Already used by hundreds of employees at Lotus Development Corporation, the software often makes meetings unnecessary. Promising applications include project tracking, for keeping an eye on complex marketing programs and conferences, and broadcasting of information such as a company handbook. Other functions can include holding group discussions, such as when brainstorming product ideas, and following the history of events, as in tracking meeting agendas and minutes.

"*Notes* is limited only by the creativity of the people who buy it," Manzi maintains. Likely clients range from executive/secretary teams to sizable intercontinental discussion groups—for which *Notes* does fancy footwork, connecting multiple nets and tackling potentially nasty security problems.

Lotus has shown a *Windows*-based prototype of *Notes*, with snazzy graphics and some *Agenda*-like characteristics (including forms for input and "views" for organizing informa-

CONNECTION MACHINES

Whereas *Notes* encourages relatively informal jottings, *Staffware* from FCMC in Berkeley, California, exudes grim corporate purpose. Built to automate paper flow, *Staffware* follows a task flowchart and prods users to fill out forms. "Reminders are issued when allocated deadlines are missed," says President Tony Kobine. FCMC is polishing *Calypso*, an OS/2-based successor to *Staffware* that integrates other applications and tools. "We think of the computer as a utility that's there to remind people," Kobine comments.

The Coordinator from Action Technologies in Emeryville, California, coordinates work efforts via a set of management tools built on top of sophisticated E-mail. The package follows work commitments to prevent items from falling through the cracks; although its nagging may rub many people the wrong way, the program can produce tangible rewards.

Coordination Technology, a well-heeled start-up in Trumbull, Connecticut, is busy on an even more ambitious project. This package, as yet unnamed, will support and then orchestrate many of the dozens or even hundreds of tasks that individuals and work groups face at any given moment—rather than focusing on individual tasks (as do most work-group

packages) or emphasizing explicit commitments made about given tasks (à la *The Coordinator*).

Chief Technical Officer Anatol Holt explains that Coordination Technology's package springs from his work in "connection mechanics," which, he says, deals with "people working together in physically organized work environments." One key to the package's development is a structured view of fundamental types of human interactions.

The package lets users organize work into a number of electronic centers, one per major job function. A sales vice president, for example, might have one center for tracking sales, one for personnel, and so on. Within each center you'll find role assignments (such as *acceptor* for budget review), links to the appropriate work group, and software tools (including standard applications such as 1-2-3). Coordination Technology aims for maximum flexibility. "The goal is letting you, the user, build the environment," says Holt, with the network providing the connections. The prototype runs in DOS. A commercial edition requiring OS/2 with the Presentation Manager will appear next year.

REAL-TIMELY MEETINGS

Data General strives for another lofty goal: supporting "live" electronic meetings. Chris Stone, manager of the company's Office Systems Group in Westboro, Massachusetts, says a likely use for its prototype *Windows*-based application would be several people reviewing a budget at once. "The same document appears on everyone's PC at the same time, and simultaneously you can talk over the phone." The meeting leader controls participants' degree of access; each person can manipulate the screen by mouse and annotate voice comments.

What will make or break the software, Stone says, is its speed of response and its flexibility—including

Building Blocks of Work-Group Productivity

- Scheduling (maintaining appointment and meeting lists, and allocating resources)
- Document processing (creating, editing, tracking, distributing, and archiving memos, reports, and other materials)
- Bulletin boards (facilities for holding ad hoc group discussions and for broadcasting information to the entire work group)
- Time/Project management (maintaining individual and group to-do lists, and tracking work in progress)
- Computer conferencing (controlling and tracking formal group discussions)
- Work flow coordination (coordinating and tracking tasks that require more than one work-group member)
- Electronic mail (sending messages and formatted files to individuals or groups)
- Data base management (storing, categorizing, and retrieving information, including electronic mail messages)

its ability to accommodate arguments, when those crop up. Still, early testing of the package, which currently has no release schedule, shows that many users prefer to meet in the flesh. Another constraint: "From a performance perspective, you really should have a net," Stone says. That point of view, obviously, excludes remote sites where the computer connection would be most valuable.

Jeff Raikes, Microsoft's director of applications marketing, also sees potential for electronic meetings that reach out to remote sites. "Ideally, your presentation software would be very interactive," he says; each user could look at other pieces of supporting data (like the actual numbers that generated a chart). Moreover, you could record the meeting for absentees, he suggests.

Diamond, a UNIX document-exchange application from BBN Systems and Technologies in Cambridge, Massachusetts, already offers just that. The package, which runs on Sun Microsystems' 386i, handles remote multimedia conferencing with integrated text, graphics, spreadsheets,

charts, and voice annotation. Users can record meetings, and the program runs acceptably fast at 9600 bps, BBN claims.

SLOW-BURNING BARRIERS

Group productivity applications represent a real marketing challenge, according to Lotus's Manzi. The need for long customer courtships leads to early product announcements. And a suitable distribution channel doesn't exist; today's net resellers focus much more on communications expertise than on customer application needs.

Christopher Greendale, president of Network Technologies International in Ann Arbor, Michigan, acknowledges that his firm has encountered a rocky road with its UNIX-based *docuFORUM* document collaboration software. Greendale identifies three stumbling blocks: selling the concept, finding the right fit in the computing environment, and shaping software to fit specific jobs.

How will customers measure productivity gains, and how will they get employees to sign on? "The products that do best will be those that can be grasped quickly," predicts Lifetree's Wilson. "That's far more important than anything else."

Work-group productivity software builds on a foundation that combines electronic mail and data base management services. Most packages branch out to include one or more of the functions described.

According to Jeffrey Tarter, publisher of the *Soft-letter* newsletter in Cambridge, Massachusetts, it's just as important to come up with complete solutions. Tarter points to *ForComment* from Brøderbund Software in San Rafael, California, as an example of a product that supplies only a partial solution. "*ForComment* automated one-tenth of the [document processing] problem, when you have to automate the whole thing."

As Microsoft's Raikes remarks, "Vendors have to think through the scenarios for people who will be using their work-group tools, and then enhance their spreadsheets, word processors, and so on." At the same time, the software needs more than a nodding acquaintance with nonelectronic matters, including documents.

Pricing hasn't yet settled for all categories; listings for DOS products generally range between \$100 and \$200 per user. The industrial-strength OS/2 contenders haven't arrived, but clearly the overall environment will not be cheap. 3Com's OS/2 network system software, for instance, starts at \$3000 and demands powerful 80286 and 80386 machines. Even more

alarming, a few vendors are already talking wistfully about Intel's forthcoming 80486 chip.

THE ORGANIZATIONAL MANDATE

Mundane functions like scheduling can offer appreciable assistance in handling resources like conference rooms and audiovisual equipment. Payoffs can increase with large networks. For example, on a Banyan Systems wide area net, Trellis's *TimeTalk* can schedule fleets of cars at various sites and describe each car.

But add personal schedules to the equation, and it may no longer balance. Do you want all your co-workers to know your exact schedule? wonders Carol Woolfe, applications manager at Banyan in Westboro, Massachusetts.

Thriving on open information exchange, on-line conferences may yield some ancillary benefits, such as doing away with the powers of oratory and putting the focus on substance. New York group-productivity evangelist Esther Dyson claims that such systems "expose the hand wavers—everybody's argument looks plausible or implausible depending on the argument, not who said it."

"[Electronically linked] work groups are going to take a lot of personnel management," predicts Woolfe. "This is a new way of doing business—you're not just replacing a calculator with 1-2-3—and it's scary stuff."

Achieving user friendliness "gets more intricate as the application gets more intricate," Woolfe adds, and clearly many offerings are confronting that dilemma. (Coordination Technology's prototype labels 1-2-3 an "encapsulated foreign object.") And with what conflicting interfaces should the software comply?

But despite all the hype, delays, and risks, users should watch for these packages. "A *VisiCalc* of networking is inevitable," declares Dave Williams, Banyan's director of product planning. And he stresses that such offerings will fortify not just work groups but entire companies. "As the network snakes through the organization, it becomes a nervous system that ties the organization together." ●

OS/2 EXTENDS ITS REACH

To stay in business in the 1990s, PCs will need to make connections. OS/2 Extended Edition will help them become upwardly mobile.

Eric Bender

If you upgrade from IBM's OS/2 Standard Edition to the new Extended Edition, does the operating system look different? No, because it's identical—"Extended" refers to added communications and data base management applications that IBM believes essential to any well-connected workstation.

IBM projects that by 1992, around 95 percent of all business PCs will be connected to their peers or larger systems. That scenario seems to call for a broad suite of connectivity choices, with corresponding data base underpinnings. "The disciplines of communications and data base management are becoming heavily dependent on each other," explains Tony Dvorak, manager of Extended Edition product operations at IBM's Entry Systems Division programming center in Austin, Texas.

With Extended Edition, IBM aims "to make a very advanced application platform that's very simple for application programmers," Dvorak says. The software

also has to fit within IBM's imposing Systems Application Architecture (SAA) scheme, which calls for common application programming interfaces, user access methods, and communications options across IBM's major mainframes, minis, and micros.

The project called for massive in-house development, so IBM wrote Extended without the help of Microsoft. Does that make it a closed architecture? Not really. IBM is releasing specifications and tools much the way it has done with DOS. Communications vendors will compete no more directly with IBM than before. Data base suppliers can choose among platforms from IBM, Microsoft/Ashton-Tate, and others.

Customers saw IBM's first tangible results when Extended 1.0, which is character-based like Standard 1.0, arrived in August. Extended 1.1 will be available

in November and will add Standard 1.1's Presentation Manager interface, although that won't be incorporated into the communications and data base management programs. Each version of Extended costs \$795, with a free upgrade from 1.0 to 1.1.

Machine requirements are hefty. IBM says that you can get by with 3MB of memory and a 20MB hard disk, but if you take advantage of Extended's communications and data base functions, you will probably need at least 5MB of memory and a hard disk several times larger.

COMMUNICATIONS: THE VEGEMATIC MODEL

Corporate customers search for simple but effective ways to blend together applications and data files stored in their various types of machines. Extended's communications manager aims to support the PC end of that process.

Extended offers optional terminal emulation and file transfer for IBM 3101 and DEC VT 100 asynchronous terminals, and local (Dis-

tributed Functions Terminal) and remote (Synchronous Data Link Control) 3270 synchronous devices. But Extended provides only bare-bones functionality—less than that found in DOS equivalents. The software does raise the ceiling on mixed and multiple communications sessions, though, including up to five DFT and five SDLC sessions. Every Extended PC also gets communications management tools for nets of all sizes—including hooks for managing large computer networks.

For the moment, users with most third-party peripherals (including Digital Communications' popular IRMA boards) are out of luck. Extended can't reach them, and IBM hasn't revealed any plans to change that.

This fall Extended 1.1 will hook up with Token-Ring and PC Network nets via IBM's *OS/2 LAN Server* software. At a future date, IBM will support the high-level 3270 programming interface, X.25 data networks, a systems network architecture local area network gateway, and emulation of the 5250 terminals that connect to System 3x and AS/400 minicomputers.

In general, IBM's rivals say they'll be the first to move most of the communications functions away from the PC and into a local area net server.

Extended Edition's communications manager is designed to let PCs juggle several different types of connections at once.

Users can access the data base manager's SQL engine through a bare-bones query manager; here a prompted query is underway.

ONE STORY, ONE SQL

Little brother to IBM's *DB2* relational system, Extended's data base manager is a single-user package. It divides into two components: A Structured Query Language (SQL) engine offers low-level data management functions, and a query manager provides both developer and end-user tools. Users can work from a com-

mand line or rely on menu-driven prompts that facilitate data entry, edits, queries, and report generation and even help you build custom interfaces. As with most relational data bases, the standard prompts are not overwhelmingly intuitive.

Single-user applications that respect SQL calls need

Upgrade Plans for OS/2 Extended Edition

	Extended Edition 1.0	Extended Edition 1.1	Extended Edition planned
Includes	OS/2 Standard Edition 1.0	OS/2 Standard Edition 1.1	OS/2 Standard Edition 1.1 or later version
Communications			
Multiple asynchronous	Y	Y	Y
3270 DFT, SDLC	Y	Y	Y
Token-Ring network	N	Y	Y
PC Network	N	Y	Y
SNA network gateway	N	N	Y
X.25 support	N	N	Y
5250 emulation	N	N	Y
Data base			
Single-user relational	Y	Y	Y
Network multiuser	N	N	Y
Minimum memory	3MB	3MB	n/a
Minimum storage requirement	20MB	20MB	n/a

OS/2 Extended Edition 1.0 offers relatively limited communications and data base modules. Version 1.1 will incorporate the Presentation Manager and support for files exceeding 32MB, plus connections for IBM local area networks.

not be rewritten for future multiuser offerings. Those offerings will include a data server for OS/2 networks, although Big Blue has not specified when such a product would appear.

Years from now, users will reach the higher altitudes of SAA where they won't have to worry whether data is on a PC in the office, a mainframe in Chicago, or a mini in Minneapolis. "Distributing SQL requests from a given task to multiple systems—PS/2s, System/370s, or AS/400s—is our goal," Dvorak says. "That's a difficult problem."

For more basic data base chores, Extended already offers the building blocks. The leading PC data managers are being recast to handle SQL, and those should sit comfortably on top of Extended's data base engine.

CHECKING THE COMPETITION

How does Extended stack up against its adversaries?

On the hardware side, Extended does not demand a PS/2. It runs—slowly—on an AT. It also works on Compaq Deskpros and other highly compatible PCs, minimizing any threat to those vendors. But IBM calls the Extended Edition one of the first packages that tunes into the PS/2's Micro Channel Architecture.

The Micro Channel supplies a broader bandwidth than the normal 10-MHz AT bus and more rugged performance for multiple communications links. While an AT can handle several 3270 sessions, for example, such hardware was not intended to play referee while concurrent sessions wrestle for the communications ports. Designed to share such interrupts, the Micro Channel lets PS/2 owners juggle

more—and more varied—sessions. During the next decade, that may prove important to significant numbers of buyers.

In the software market, confusion reigns, partly because so many interlocking pieces will go into complete installations.

At the LAN level, the emerging Extended family primarily faces off against Microsoft, Novell, and their respective allies. But it's too early to handicap the race. Nobody's close to shipping complete kits. Look at data bases, now splitting into front ends and servers: The Microsoft/Ashton-Tate *SQL/Server* will butt heads with an unannounced Extended server, while an upgrade of Extended's query manager will duel with an unannounced Microsoft front-end package, among others.

Even though competitors may often surpass Extended's features, the software will become a de facto standard among the large corporate customers where IBM rules. And in that environment, it will extend our definition of a minimum workstation. ●

we have the VGA display for it.

Magnavox introduces two new Professional Series displays that are fully compatible with all 17 VGA modes—both designed with the intelligence you've come to expect from Magnavox.

With a VGA display system, you'll get the most out of your present software and prepare yourself for graphics environments like Windows 386, OS/2,[™] and Presentation Manager.[™] Resolutions include 720 x

400 for text, and 640 x 480 in 256 colors for graphics.

Both displays have a 14" CRT, versus the 12" industry standard. And both come with a built-in tilt/swivel base and are backed by a 2-year limited warranty—twice as long as most other brands.

At \$229 for the 7BM749 paper-white monochrome and \$649 for the 9CM082 color display, Magnavox makes VGA displays affordable.

ACCOUNTING TOOLS OF THE TRADES

RALPH SOUCIE

Industry-specific accounting systems can be the best solution for businesses with special needs. PC World surveys top products in three domains: point-of-sale, construction, and medical practice.

Off-the-shelf accounting packages aren't for everybody, but few companies can afford to code their own accounting systems from scratch. Fortunately, there is a middle ground: industry-specific or "vertical market"

accounting packages tailored to your type of business. Of course, such systems aren't cheap. One thousand dollars typically buys a specialized module and perhaps some general accounting functions such as inventory or accounts receivable; a complete multiuser turnkey hardware/software system with a lot of on-site hand-holding can easily top \$30,000.

Still, vertical market developers offer some things most *DacEasy* or *Solomon III* dealers can't—namely, familiarity with your industry's accounting cycles and vocabulary, plus comprehensive training and support. And there's another bonus: Since a vertical accounting package speaks your language, it's often easier to learn and use than all-purpose general accounting programs.

Careful shopping is still the watchword, because what you get depends on the source. Value-added resellers (VARs) often bundle the software with hardware—from PCs to bar-code readers to sales-slip printers. Other VARs (and vendors) include general ledger, accounts receivable, and accounts payable functions with the specialty modules, while still others offer packages that merely work with popular off-the-shelf accounting programs.

Dazzled by all this diversity? Trade organizations and industry-specific groups can be a valuable resource for prospective buyers; some publish reviews of accounting software or keep lists of recommended products. *PC World's* survey of 18 vendors offering specialized retail, construction, and medical market accounting systems should get you off to a good start. Peruse the product descriptions, contact likely vendors for details and demos, and you'll be well on your way to making a sound business decision.

POINT-OF-SALE RETAIL

Point-of-sale (POS) software captures transactions; stores pricing data; and works with inventory, general ledger, and other "back office" accounting programs. A PC/cash-drawer combination typically records transactions at the front counter; dedicated digital cash registers (including those with programmable keypads) are the exception.

Naturally, you should look for a POS package that works with your registers and can reprogram them. If a PC is at the front counter, the program should allow on-line access to inventory and credit information. The POS package should also handle all standard retail functions from "no sale" to split-tendered (part cash, part credit) transactions; accept input from bar-code readers; and provide a simple tickler-file interface to inventory data. Look, too, for security features that protect against employees tapping the till.

Larger retailers should consider how POS data feeds into a sales-reporting module, as well as the system's ability to address multiple cash drawers and track inventory stored in a number of locations.

Mainstreet Merchandiser

Armor Systems

Mainstreet Merchandiser consists of POS, inventory control, accounts receivable, and customer data base modules. It supports input devices such as bar-code readers and programmable keypads. Support for wholesale operations—such as picking tickets—is included, and it can handle serialized inventory. One nicety: The program allows you to print a price quote for requested or out-of-stock items, then retrieve it later for an invoice. The package produces reports on lost sales and customer buying histories. Limited custom report formatting is available.

ARCS, Advantage

DataSym

DataSym offers a generic, single-store POS system called *ARCS* and a five-store system called *Advantage*, plus a variety of customized products that address special niches like theaters, restaurants, liquor stores, and apparel stores. *ARCS* utilizes cash registers (not PCs) as POS devices, and supplies PC interface boards for Sharp registers and PROM chips that reprogram keypads. The program produces reports on profit margin by item and fast, slow, and zero inventory movement. Separate modules handle general accounting functions such as inventory and invoicing.

Key Retailer

SoftKey Software Products

SoftKey's *Key Retailer* is unusual in that POS, inventory, general ledger, accounts receivable, accounts payable, and purchase order modules are bundled into a complete accounting system. Though originally designed for small-to-medium operations, the product today is used by some chains. It supports bar-code readers, up to 200 registers on a network, split tendering, multiple price levels, and serialized inventory. It does not, however, store and retrieve price quotes or support programmable keypads. The system time-stamps transactions and generates reports analyzing peak sales periods and serialized goods broken down by location or by customer.

Retail Management System

Westech Corp.

The *Retail Management System* concentrates on POS operating, inventory control, and customer data base management for individual stores; for general accounting functions, you must turn to the Star, Boss, or Certiflex product lines. A separately priced \$244 mailing-list program allows a cashier to pull customer addresses from a data base and patch them into invoices. The inventory value report includes some rudimentary graphics that can highlight undesirable inventory buildups.

PC Register, Store Front Retailing, Branch Store Retailing *Trac Line Software*

Trac Line has a system for almost any size retail operation, and all work with the vendor's full-function *Integrated Accounting* program. *PC Register*, an entry-level package, requires extra software and a modem to link to the accounting program. The more capable *Store Front Retailing* supports two registers and adds some inventory, purchasing, and accounts receivable functions. Aimed at small chains, *Branch Store Retailing* handles several registers within an individual store and can track and maintain inventory at multiple locations. An on-line querying feature allows the salesperson to pull up historical detail to help sell add-on products and respond to customer questions.

StoreMinder, InStore *Xtrasoft*

StoreMinder is not a product itself but an umbrella trade name for a series of stand-alone modules: *SalesMinder* (POS), *StockMinder* (inventory), and *MailMinder* (customer data base). *InStore*, the flagship of a separate product line, combines POS and inventory functions for large chains, supports file and record locking, and can handle up to 26 registers on a network. Both *StoreMinder* and *InStore* support bar-code readers and programmable keypads, print full invoices or sales slips, and handle split tendering. A reorder report and multilevel pricing on the inventory status report are included. Xtrasoft products work with DASI's full-function accounting software.

CONSTRUCTION

The construction industry embraces everything from small companies putting up eight houses a year, to general contractors building apartment complexes, to large firms fulfilling major government contracts. Yet all construction accounting software is built around a job-cost module. Some vendors provide estimating and bid-analysis modules; if you win the bid, you use the bid data to set up the job-cost file. Most estimating modules allow you to "take off" quantities for pricing. Unless otherwise noted, you can assume the following packages include fixed-contract and time-and-materials billing; the estimating modules (if offered) are integrated with the job-cost module. Payroll support varies; the high-end systems handle numerous pay rates and multiple job sites across several states within a pay period, and produce certified reports for the Department of Labor. In general, systems designed for larger construction firms include more reporting because of government regulations.

Construction Management, Construction Accounting *Small Systems Design*

Approved by the National Association of Home Builders (NAHB), this series includes complete job-cost and accounting functions for

general contractors who work on a variety of projects. The *Construction Management* package maintains a complete bid history and features point-and-shoot selection of menu items as well as automatic job-file updating. Job reporting is very flexible—you can select items individually, in ranges, or all at once by date, vendor, job, and many other parameters. Templates automate job setup, and you can query the system via pop-up windows. There's even a project scheduler that features bar-graph and critical-path reports. The company's *Construction Accounting* package includes job-cost, general ledger, accounts receivable, accounts payable, and payroll modules, plus some estimating capability, but it lacks many of *Construction Management's* advanced features. The company sells inventory and job-cost estimating modules, a special edition of its construction software for electrical contractors, and a service-bureau version which maintains data for several companies.

Series 2000

Concord Management Systems

Series 2000 is a multimodule package that offers large-scale builders a comprehensive and powerful accounting and construction management system. The job-cost data base is flexible, the payroll module well equipped for governmental reporting, and the query tools geared for decision support. Other high-end features include the ability to handle retainages, digitized takeoffs, and service orders. The program generates an executive summary highlighting gross and net profit by job, and it can print AIA-format draw requests on standard G703 forms.

Libra Construction Software

Libra Corporation

Libra is popular with some Big Eight accounting firms because it combines strong general accounting and construction functions. Designed for companies managing several projects at once, *Libra's* job-file data base allows you to define data fields and track jobs by estimator, project manager, or foreman. The program also tracks equipment use. *Libra* markets an estimating module that integrates with the job-cost module and supports digitized takeoffs. The system can also create custom reports. *Libra* also offers specialized submodules from laser check printing (\$995) to sales analysis and billing (\$200).

Medallion, Precision

Timberline Software

Timberline offers three different selections from its line of modules: *Medallion/Builder* for home-builders; *Medallion/General* for general contractors; and *Medallion/Specialty* for plumbing, heating, or electrical contract work. All three modules can track multiple companies, and all three come in multi-user versions. You can produce detailed per-unit cost reports, bonding reports, and phase graphs to aid in scheduling subcontractors. The company also offers a separate estimating module. Timberline's *Precision* series provides estimating and bid analysis functions that work with the job-cost module; the package supports digitized takeoffs and uses pop-up windows.

Basic Builder, Profit Builder

Construction Data Control

Basic Builder is a simple, single-user, single-company system that bundles job-cost, general ledger, accounts receivable, and accounts payable modules into a \$1695 package.

¹ May be offered via extra module.

² Exports files in 1-2-3 .WKS and .WK1 formats.

³ Exports files in dBASE .DBF format.

⁴ Exports files in ASCII format.

⁵ Supplied by VARs; arrangements vary.

⁶ Trac Line offers 30 minutes of free support during the first 30 days of purchase.

⁷ Price for all modules.

⁸ Support costs based on a percentage of module's purchase price.

⁹ Only with PC*Claim.

(Estimating and payroll modules are extra.) The job status report shows projected cost variances and can detail costs by category or summarize them by class. *Profit Builder* is a multicompny, networkable series that you buy module by module. A *Basic Builder* user can re-

ceive credit toward a *Profit Builder* upgrade and obtain a conversion utility that moves data from one system into the other. Both product lines feature point-and-shoot operations, macros, and queries via pop-up windows. The estimating modules support digitized takeoffs, but neither system handles time-and-materials billing.

Business Management System, Professional Estimating

Enterprise Computer Systems

Highly rated by the NAHB for ease of use and overall customer satisfaction, Enterprise's products are aimed at small and medium-size home builders. Along with its general accounting functions, the *Business Management System* includes documentation aimed at newcomers to PC-based accounting, an on-disk tutorial, and extensive sample data. The job-cost module produces up to 96 distinct reports and offers formats for different types of building. *Professional Estimating* comes with a 10,000-part data base and applies a systematic approach to pricing jobs.

MEDICAL

Since many patients pay for medical services via third-party insurance carriers, billing is the most pressing accounting problem facing doctors, medical corporations, and clinics. More than other specialized programs, medical market software attempts to provide "total solutions," offering the basic accounting modules and necessary hardware for one (usually expensive) package price. In addition to billing and accounting, some packages offer modules for scheduling appointments and making follow-up phone calls to

patients; some even maintain clinical information on patients. Reporting can also be rather sophisticated, detailing contact lenses sold by month or comparing each doctor's financial performance over time.

Flexible Package

Elcomp Systems

Highly adaptable to individual needs, this package comprises a "medical core" module that handles patient registration, accounts receivable, and budgeting. Optional modules take care of general accounting, electronic claims, insurance forms design, patient recalls, appointment scheduling, and medical records. Most modules offer both family-practice and specialty-practice billing. The system can report on overdue insurance claims and produce 14-month financial trend reports.

CompuMedic

Data Strategies

CompuMedic consists of accounts receivable, insurance processing, patient records, recalls, general ledger, word processing, a powerful report writer, and a tie-in to General Electric's on-line medical claims clearinghouse. Additional options include accounts payable, patient scheduling, inventory, and electronic medicare claims submission. You can also design custom reports with the system.

Medical Office Billing System, Medical Office Management System

American Medical Software

The *Office Billing System* takes care of billing, accounts receivable, and insurance claims processing. The *Office Management System* handles appointment scheduling; generates revenue analysis reports by practice (according to diagnosis, location, physician, or procedure),

plus other diagnosis and procedure history reports; and offers a word processing interface. An electronic claims module is also available.

TIPS Healthcare Management System

PSM

PSM's package comes in basic and advanced versions. At a minimum you get accounts receivable, insurance processing, patient recalls (with batch printing of postcards), and general accounting. The advanced package adds electronic claims, clinical and lab test reports, surgical scheduling, hospital census, and more sophisticated revenue reports. *TIPS'* statistical reports can select patient records by age, sex, procedure, and many other criteria.

PAS-3 Plus Medical

Artificial Intelligence

The basic *PAS-3* package includes patient registration, accounts receivable and billing, mailing lists, and a custom insurance-forms generator. The program offers eight billing modes, pop-up windows, continuous background data-integrity checking, a pause key that temporarily suspends operations, and a relational query feature for generating custom reports from the transaction data base. The company also sells a medical records module, general ledger (payroll included) and appointment scheduling modules from another vendor, and various specialized modules for dentists, anesthesiologists, and chiropractors.

Threshold, PC*Claim

Physician's Practice Management

Threshold is a basic insurance processing package aimed at smaller practices. The system includes accounts receivable, patient regis-

tration, billing, and paper-claims processing, but only limited reporting. Option packs priced from \$305 to \$615 let you schedule appointments and generate clinical and fi-

nancial reports. *PC*Claim* focuses on electronic insurance claims processing. The company does not offer general ledger, accounts payable, or payroll modules. ●

Ralph Soucie is a CPA in Portland, Oregon, and a contributing editor for PC World.

How Hard Is Your Money Working?

Once you've put your money
to work, how do you judge its
performance?

The Du Pont Return-On-Investment chart gauges your venture's efficiency and shows you the arithmetic.

Spreadsheets

*Charles
Kyd*

Contemplating an investment? Whether it's a single share of stock, a piece of production machinery, or an entire company, one of the most important questions you can ask is, What's the ROI? Though many other factors also bear consideration, the likely return on your investment marks the threshold between thumbs up and wait and see.

But the need for ROI calculations doesn't end once the investment is made. Just as the interest rate of a savings account reflects its ongoing performance, the ROI is a vital sign of business profitability.

Since the early 1920s, the Du Pont company has used an ROI formula chart similar to the one in **FIGURE 1** to measure its internal performance. Du Pont's formula is recognized worldwide as an ef-

fective financial management tool. This article describes how to create a Du Pont ROI chart in *Excel*; however, you can use any character-based spreadsheet and approximate the look of the *Excel* chart by using the underline and vertical bar characters.

The ROI chart in **FIGURE 1** illustrates how income and assets are combined to calculate a Return-On-Investment ratio. Notice that the Du Pont formula uses gross investment (assets before deduction of accumulated depreciation) to calculate this ratio, while many other companies use net investment. Either method will work as long as you use it consistently.

FIGURE 2, which contains a standard business income and assets statement, provides the numeric data for the ROI chart in **FIGURE 1**. The Income section shows a breakdown of income for the previous 12 months, often called a

rolling 12-month income statement. The Assets section comes from the balance sheet at the end of the period. Designing the ROI chart to reference standard financial worksheets like these streamlines maintenance and makes it easier to vary the formulas, if desired.

Creating the ROI Chart

To create **FIGURE 1**, first open a new worksheet and deselect *Gridlines* in the *Options Display* dialog box. Next, in the *Format* menu, assign the 8-point Helv font to the worksheet, then set the width of columns A and U to **3.33**; columns B, F, J, N, R, and T to **3**; columns C, G, K, O, and S to **8**; and columns D, E, H, I, L, M, P, and Q to **2**. There's also a quick way to format several non-adjacent columns (or cells): Go to the first column and press **< Shift > - < F8 >**, go to the next column and press **< Shift > - < F8 >** twice, go to the next column, and so on. Then set the desired format.

Enter the labels shown for cells K5 and K6 and assign the 10-point Helv Bold font to the range K5:S5. Enter the formula **=TEXT(DATE(88,11,1),"mm, yyyy")** into cell S5 to display the date as text; this allows the date to extend beyond the limits of column S without returning an overflow error as a value-format date would. To complete the date format, select *Format Alignment* and choose *Right*, which forces excess text to extend beyond the left border of cell S5.

FIGURE 1: Standard income-statement and balance-sheet numbers plug into this Excel worksheet to calculate the Return On Investment.

The range C5:E9 contains a pattern of borders and symbols that you can copy to create the remainder of the chart quickly. To format cells C5, C9, and E7, select the *Format Border* menu and select *Outline*. Center-align the range using the *Format Alignment Center* command, and assign the numeric format to cells C5 and C9 from the *Format Number* menu. To draw connect-

ing lines between cells, create top and right borders in the necessary cells in column D using *Format Border*.

Next, copy all or part of the range you've just created to the necessary locations (C14, C18, C22, and so on). Then enter the remaining labels and addition,

subtraction, multiplication, and division symbols. To create the arrow in cell F7, enter a space, four dashes, and a greater-than symbol.

Format cells O20 and S27 as percentages and cell O36 using one decimal place. Finally, to frame the entire chart, select the range B3:T49 and choose *Outline* from the *Format Border* menu.

FIGURE 2 is created within the same worksheet as **FIGURE 1** to make cell referencing easier. Starting in cell B55, type in all labels as shown and assign the numeric format to the ranges K58:K74 and W58:W74. Then, in cell K60 enter $=\$K\$58 + \$K\$59$; in cell K63 enter $=\$K\$60 - \$K\$62$; in cell K69 enter $=\text{SUM}(\$K\$65:\$K\$68)$; in cell K74 enter $=\$K\$63 - \$K\$69 - \$K\$71 - \$K\$72$; in cell W62 enter $=\text{SUM}(\$W\$58:\$W\$61)$; in cell W66 enter $=\$W\$64 - \$W\$65$; and in cell W71 enter $=\$W\$62 + \$W\$66 + \$W\$69$.

To reference the data in your chart, open a new window with *Window New Window* and turn off its gridlines. Then, arrange the windows side by side with *Windows Arrange All*. In one window, display the cells in the ROI chart that you want to fill; in the other window, display **FIGURE 2**, containing the data. You now have two views of the same worksheet. To fill the chart's first cell, Sales, select cell C5 in one window, enter $=$, select cell K58 in the other window, press the $\langle F4 \rangle$ (Absolute/Relative) key to assign an absolute reference to the formula, and then press $\langle \text{Enter} \rangle$.

Repeat this technique for cells C9 and K59, C14 and K62, and so on. In the case of cell C18 (Selling & G&A), you'll have to finish the reference formula by

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X

76																								

FIGURE 2: The ROI chart in **FIGURE 1** gets its information from this table. The same calculations are performed in both figures to catch errors.

typing in $=\$K\$65 + \$K\$66$, since those two cells are combined on the ROI chart. After you're done, press $\langle \text{Ctrl} \rangle - \langle F4 \rangle$ to close either window.

The last step is to enter formulas into the eight cells in **FIGURE 1** that do not directly reference data in **FIGURE 2**. In cell G7 (Total Revenue) enter $=\$C\$5 + \$C\$9$; in cell G20 (Pretax Expenses) enter $=\text{SUM}(\$C\$14:\$C\$30)$; in cell G36 (Total Current Assets) enter $=\text{SUM}(\$C\$34:\$C\$46)$; in cell K14 (Net Earnings) enter $=\$G\$7 - \$G\$20 - \$G\$24$; in cell K38 (Total Investment) enter $=\text{SUM}(\$G\$36:\$G\$44)$; in cell O20 (Profit Margin) enter $=\$K\$14/\$K\$26$; in cell O36 (Turnover) enter $=\$K\$34/\$K\$38$; and in cell S27 (Return On Investment) enter $=\$O\$20 * \$O\$36$.

The formulas in cells G7, G36, and K14 perform calculations duplicated in cells K60, W62, and K74, respectively. However, repeating the calculations will help pinpoint any mistakes that might creep into a frequently edited income-and-assets statement; errors could slip by unnoticed if **FIGURE 2**'s subtotals were blindly linked to **FIGURE 1**'s.

Modifying the Du Pont Chart

Many financial analysts use variations of the Du Pont chart that you might want to create as well.

To generate the Return On Assets (rather than ROI) ratio, for example, link cell W66 (Net Fixed Assets) rather than cell W64 (Fixed Assets) to cell G40. Another variation calculates Return On Equity by adding a third ratio, consisting of net assets divided by stockholders' equity, to column O. Multiplying this new ratio by Turnover and Profit Margin returns the ROE. Another variation excludes interest expense and taxes from the calculation of expenses. This separates the effects of the business's internal operations from external tax and financing costs. Whichever variation you choose, the Du Pont formula is an invaluable tool for calculating profitability. ●

Toshiba's 6.4 Pound T1000 Is the Lightest Laptop Yet

PC HANDS ON

BY HOWARD MARKS

Big advances have been made in DOS-compatible laptop computers in the last year. Backlighting and supertwist LCDs have made screens sharper than ever, miniaturized hard disks from JVC have expanded the

with the programs on your desktop computer.

Toshiba America, which had a lot to do with this laptop revolution, is bucking the trend. Its new T1000 sacrifices a few of the amenities we've come to expect from new laptops but delivers the essentials in a sturdy 6.4-pound package.

There's no

But the T1000 is a case of less being more. The design is brilliant. DOS is stowed on a ROM chip for instant booting. The 12 1/4-by-2-by-11-inch package fits in an ordinary briefcase. It runs on a charge for 5 hours and can keep up with

light, portable computer.

A couple of pounds heavier than Tandy's Model 100, its far more powerful.

Of course, Toshiba was under pressure to come up with something. A tariff imposed by the government

LAN Magazine

A Major Technological Feat. There Is Nothing That Comes Close To The T1000.

By Harry Newton

This is another one of my biased test drives. I like this product. I use it. I am writing this test drive on it, sitting in bed. It is one gorgeous luxury. The T1000 is the lightest PC-compatible laptop at 6.4 pounds (in case you're not fully loaded).

BYTE

JANUARY 1988

THE MOST PORTABLE IBM PC-COMPATIBLE COMPUTER I'VE EVER USED.

The T1000 (see photo A) is a full IBM PC-compatible computer in a compact 6 1/2-pound package. In its standard configuration, the T1000 comes with an 80C88 running at 477 MHz, 512K bytes of 100-ns RAM, MS-DOS version 2.11 in ROM, a single 720K 3 1/2-inch floppy disk drive.

PC WEEK

T-1000 Lap-Top: Light, but No Featherweight in Performance

By Stephen Sagman

To fashion the extraordinarily small T-1000 lap-top computer, Toshiba engineers took their best-selling T-1100+ lap-top, miniaturized everything they could and scrapped the frills.

What they came up with is a featherweight. It's a little bigger than a briefcase, but it packs a punch.

That Toshiba engineers gave overriding emphasis to keeping the T-1000's size and weight down is evident in every aspect of its design.

The T-1000 display is the same supertwist LCD panel used in the Toshiba T-1100+. It has the advantage of providing high-contrast text and graphics while drawing very little power. The battery life is also impressive.

Before You Choose A Portable PC, Make Sure You Read The Fine Print.

When the experts reviewed our lightweight T1000, they did anything but take it lightly.

Because even though it weighs just 6.4 pounds and takes up less than a square foot of desk space, they found it has the power of a desktop PC.

So it's little wonder they were so impressed with everything we managed to fit inside. Like 512KB of RAM. A 720KB 3 1/2" floppy drive. MS-DOS® 2.11 in ROM. And a full array of built-in interface ports.

Equally impressive is our optional 768Card, which can be configured as EMS memory or as a battery-backed RAM disk. With it, you can

load your software onto the 768Card—which then acts like an invisible second drive—and get even faster access to all your programs.

All of which helps explain why the experts' reactions were so flattering.

But since your opinion is the only one that really counts, we encourage you to call 1-800-457-7777 to learn more about Toshiba computers and printers.

That way you may very well come up with a few positive quotes of your own.

The 6.4 pound T1000

The T1000 is backed by the Exceptional Care program. No-cost enrollment required. See your local dealer for details. MS-DOS® is a trademark of Microsoft Corporation.

CONSUMER WATCH

Advice and information for the computer consumer

"Pushed" PCs deliver fast performance at a low cost—but buying one could be risky.

Anita
Amirrezvani

If you're looking for a fast PC, shop with caution. Advertised speed ratings can be misleading—and a PC's microprocessor could be less than it's cracked up to be.

A system advertised as a 25-MHz 386 may not actually contain an 80386-25 chip. This 25-MHz microprocessor—the fastest Intel makes—is not expected to be widely available until early 1989. In the meantime, smaller vendors who can't get the fastest chips are buying 20-MHz 80386s and "pushing" them beyond specification, to 24 MHz and sometimes further.

This speeding-up process unfolds in several stages. First, the manufacturer buys thousands of Intel chips and screens them, searching for chips that will run faster than specification. In the next stage, each screened chip is paired with a faster crystal, the part that regulates a microprocessor's speed. A crystal operating at a higher frequency makes the microprocessor perform faster—for example, at 25 MHz instead of 20 MHz. Other parts, such as memory chips, must also run faster for the system to work.

Intel Takes a Stand

According to Intel, it's risky to run a chip beyond its specification. "We test our parts to work right at the specified frequency under a series of conditions that include different voltages and operating temperatures," says Intel marketing director Claude

Leglise. "When parts are used out of specification, the system could freeze, math results could be erroneous, and the parts could become overstressed and break. It doesn't always happen, but it's hard to predict when it will and when it won't."

"There are many ways to speed up your system that are easy and safe," adds Intel's Bill Rash, product marketing manager for 32-bit chips. "You can go out and buy an accelerator board, for example. With a speeded-up system you're crossing your fingers that you won't run into problems."

Even some manufacturers believe pushed PCs are risky. "Insidious problems can occur, like a wrong number appearing in a spreadsheet," says Ken Aupperle, president of motherboard maker Hauppauge Computer Works (which does not use pushed chips). "If I were buying one of those systems, I would make sure the vendor knew how to properly screen the parts. But outside of IBM or DEC, there aren't too many vendors whose word I would take."

The Other Side of the Coin

Manufacturers of speeded-up systems beg to differ. "There's a lot of politics in this. Intel doesn't want people to believe that its 16-MHz chips will run at 20 MHz because it wants to sell the 20s for a higher price," says *(continues)*

RATE YOUR SATISFACTION: Data Bases

Market giant *dBASE* boasts a decent user satisfaction rating—but it's not as high as *Paradox*'s. Even so, more of the survey sites plan to buy *dBASE* than *Paradox* this year.

Although its installed base is large far a *dBASE* competitor, *R:base* received only an average user-satisfaction rating among survey participants and ranked at the bottom of the plan-to-buy list.

Flat-file upstart *Q&A* isn't widely distributed among survey sites, but it rated as highly as *dBASE* in user satisfaction. Not surprisingly, a healthy percentage of the companies say they plan to buy *Q&A*.

Source: International Data Corporation. From a survey conducted in February 1988 at 185 sites, each with at least 50 PCs.

Guy Duff, national sales manager for Dyna Computers in San Jose, California.

Dyna Computers currently sells a 24-MHz 386 system and motherboard and has been selling pushed 80286 systems for years. "Based on our previous experience, Intel chips are built well beyond specification," says Duff. After the chips have been screened, he says, every Dyna motherboard is burned in and tested in a "hot box" for 72 hours. According to Duff, "After six years of business, we haven't gotten a single dead CPU back from our customers."

Computer Classifieds, a vendor in Miami, also sells pushed 24-MHz systems—but doesn't drive the chip up to 25 MHz. "It takes much more testing to screen reliably beyond 24 MHz," says Marketing Vice President Charles Papir. "There's a happy medium between the amount of testing required and the final price."

For consumers, the advantage to buying a pushed PC is cost. Major manufacturers sell 25-MHz 80386s for top dollar—IBM's least expensive complete system, for example, retails for \$8600. "You can get one of our 24-MHz systems for half that price," says Dyna Computers' Duff. Moreover, a speeded-up system may deliver a lot of performance without costing much more than a slower PC. Computer Classifieds' 24-MHz system sells for roughly \$4300 with a monitor and hard disk—only about \$400 more than its 20-MHz machine.

Even when 25-MHz chips are available to any manufacturer that wants them, systems will continue to be pushed—so long

as there's a demand for better performance. Vendors estimate that the 80386-25, for example, can be speeded up to 32 MHz.

Zippy Coprocessors

Coprocessors can also be pushed to achieve faster speeds—and that's exactly what Ariel Computer in Flemington, New Jersey, is doing. "We test thousands of coprocessors every month," says Ariel vice president of engineering Jeff Lackman. "Most 10-MHz chips can qualify for 12, others make it to 14 or 16 and some even get up to 20 MHz. Originally our customers were mostly technical; now the mainstream is picking up because graphics and *Microsoft Windows* programs require a lot of processing power."

The fastest 80287 available from Intel is officially rated at 10 MHz. These chips can be purchased through mail order for about \$319; chips pushed by Ariel to 12 MHz are \$499, 14s are \$599, and 16s are \$699. "Large corporations say our product allows them to use PCs instead of minicomputers for big calculations," says Lackman.

Ariel also sells an \$89.95 product called XCELX Speed-injector, a crystal you can install in your PC to speed up an existing 80287 to 16 MHz. A similar concept applies to turbocharging microprocessors: Vector Development sells a \$125 product called AT TurboSwitch II that you can use to run a 6-MHz IBM AT (but not compatibles) at speeds of up to 12.5 MHz. But in both cases, the crystal is speeding up a chip that hasn't been screened or a system that hasn't been tested at higher levels of heat and stress. So you may get unpredictable results.

New.
KODAK DATASHOW HR System
puts IBM PC images on the big screen.

Kodak introduced the revolutionary idea of an LCD to project PC images on a big screen with an overhead projector. Now the revolution continues with the next generation of Kodak's ultra twist LCD crystals. They project clearly superior images with a high-resolution 640 x 400 pixel display and exclusive 20:1 contrast ratio. System compatibility has also been extended to PCs with EGA as well as CGA, the colors automatically defined in true shades of gray. You won't have to fiddle with fluctuating contrast, either. The new cooling system eliminates heat buildup causing this problem in other systems. An IR remote control is included along with software

for presentation management and remote control of application programs. This system can be used with IBM PCs and 100% compatibles. For product and dealer information, call 1 800 44KODAK (1 800 445-6325), Ext 842N.

**Corporate Climbing
Gear From Kodak**

THE BEST IMAGE FOR YOUR PC IS FROM KODAK

The new vision of Kodak

Buying Tips for Systems

Before buying a PC, you have the right to know whether the system has been pushed or actually contains a microprocessor rated at the advertised speed. If there's any doubt, open it up and check the microprocessor yourself. Every Intel chip's spec is etched right on its outside cover.

Note, too, that faster machines generate more heat and may have more difficulty getting Class B approval from the Federal Communications Commission. Class B PCs are shielded more thoroughly than Class A machines and are cleared for residential use. The issue is possible interference: radio reception problems or "snow" on your TV while the PC is on.

According to FCC engineer Liliane Volcy, "The compliance rate with Class B regulations is very low. Many companies don't have the capital to invest in system design and testing, or they simply want to keep the computer's cost down." If the computer is going to be used at home, you should make sure it's rated Class B by the FCC.

If you want to buy a pushed system, find out first how rigorous the manufacturer's tests are. "If a company just puts in the chip, boots the computer, and then sends it off, that's not good," says Computer Classifieds' Papir.

Get any speed guarantees in writing, advises Ariel's Lackman. "I've seen this loophole: A system is supposed to run at 8, 10, 12, and 16 MHz, but when the user runs it at 16 MHz, it dies.

The manufacturer says, 'Sorry, but to run it at 16 MHz you need a new chip.'"

Finally, find out about replacement policies. Companies that stand behind their products will be generous about fixing problems. "If your CPU dies, we'll send you a new one by overnight mail," says Dyna Computers' Duff. A guarantee like that inspires confidence.

Speech

For over seven years the Echo™ speech output products from Street Electronics have set the standard for reasonably priced voice equipment.

There are now two new Echo speech boards for MS DOS®-based machines: the Echo MC for the IBM

Personal System/2 Micro Channel™ products, and the ECHO PC+ for the IBM PC and compatibles.

These products utilize the new

Echo speech chip which processes digitized voice; natural sounding LPC voice, and unlimited vocabulary text-to-speech.

BOOST THE CALIBER OF YOUR PRESENTATIONS.

Most slide presentations don't get banged out until the 11th hour.

With Montage™ FR1, yours can come together faster than ever.

The Montage FR1 features High Definition Digital Imaging™ technology. Translated, Montage FR1 creates brilliant, fully saturated slides with 16 million colors, in 2-3 minutes. That's *much* faster than other slidemakers.

You can use Apple Macintoshes®, IBMs® or compatibles, because Montage FR1 supports them all. At the same time. And Montage FR1 supports far more graphics and presentation software packages than any other system.

Giving you the firepower to create high impact presentations.

Part of the Montage Presentation Series, the Montage FR1 desktop slidemaker creates great slides for about 50¢ apiece. And that's just the beginning.

We've planned your investment's future, too, with an arsenal of Montage Presentation Series upgrades coming soon. They'll let you generate color overheads. Let you print color hardcopies. Work with PostScript™ software applications. All networked from your own desk.

It's the highest caliber color output in town.

For presentations that are right on the money.

Call for free facts kit with sample slide: 800-255-4574, ext. 382. In California, (714) 545-2774.

SHOP TALK

Multiplication by Division

In early 1987 I bought a Samsung monitor for my computer. Less than three months later it stopped working. It was still under warranty, so I called the company and was told to take the monitor to the local authorized service dealer. The dealer hasn't been able to fix the monitor because it has never received the necessary part from Samsung.

I've spent a great deal of time and money calling Samsung's customer service office, but to no avail.

*Uday Desai
Carbondale, Illinois*

Editor's note: When Consumer Watch contacted Samsung Electronics America (SEA) in Saddlebrook, New Jersey, a spokesperson said Mr. Desai's monitor was not made by her division of Samsung Electronics, the Korean parent company.

Consumer Watch spoke with Mr. Desai and asked him to send in a copy of his warranty card, which did indeed bear the name Samsung Electronics America. After several follow-up calls to SEA went unreturned, the same spokesperson said there had

been a lot of confusion because "many monitors got SEA registration numbers accidentally." Although she promised to follow up on the problem, nothing happened.

Finally, after more calls, SEA service engineer Jeff Reeves contacted Consumer Watch and explained that several independent divisions make Samsung monitors, including SEA in Saddlebrook and Samsung Electronics Corp. (or Ltd.) in Rancho Dominguez, California. Micro Five, a joint venture between SEA and a group of investors in Costa Mesa, California, sells computers and SEA monitors directly to end users.

According to Reeves, the full name of the Samsung division responsible for the warranty (continues)

HOW TO WRITE MOBY DICK.

Whether you're writing a marketing plan, a thesis, or the Great American Novel, Wordbench™ makes the job easier by putting all the tools you need within easy reach. And you don't have to change the way you work to use them.

THAR SHE BLOWS! OR MAYBE OVER THAR... Wordbench's OUTLINER helps you organize your material. Simply type your headings in once and call them up when you need them. **SAVE THE WHALES—MAKE A NOTE.** Whenever you have ideas or find facts you want to include, type them into the NOTETAKER. Wordbench organizes your notes

using links to your outline and references, and can locate them with a couple of keystrokes.

CALL ME ISHMAEL.

Stuck for a brilliant introduction?

The BRAINSTORMER can help get you started and bust through writer's block. **GO OUT WITH A SPLASH.** Once you've assembled your notes and outlines, use the WRITER to merge them instantly into your rough draft. No retyping needed. Editing is as simple as highlighting, cutting and moving words, paragraphs or pages. Polishing your piece is easy with a built-in THESAURUS and SPELLER. And

Wordbench's formatting features will give your work a professionally printed look.

Wordbench is available for the Apple® IIe/IIc/IIGs: \$149 and the IBM® PC (and 100% compatibles): \$189—wherever software is sold. For people who write, it's a masterpiece.

Wordbench™

The tool for people who write.

Limited Time Offer Save a Bundle On Our New Bundle.

A lot of accounting software companies will try to tell you their product does more than just accounting. So even though you can get Peachtree Complete™ II—the most complete accounting software—for a lightweight \$199, we won't tell you that it's more than an accounting package. Just that it's the most accounting power you can get for your software dollar.

Now we've bundled Peachtree Complete II and Peachtree Data Query™ II together, and cut the price \$100. So you're not only getting full-featured accounting, you're also getting custom reporting and analysis. Peachtree's "Double Bonus Bundle" gives you two first-rate software packages for one low price—Peachtree Complete II, The Business Accounting System and Peachtree Data Query II, the Custom Reporting Tool for Peachtree Complete II, both for only \$298. And that's the best deal around.

Still Just \$199 Complete. We will continue to tell you that Peachtree Complete II offers the most powerful accounting software you can buy at virtually any price. Designed and sold as a \$5,000 accounting system, the latest version of Complete II represents a vastly expanded and improved product, yet sells for an incredibly reduced price of just \$199. With that kind of value, and more than 250,000 satisfied users, our record speaks for itself.

Peachtree Complete II is a comprehensive accounting system developed

to meet the needs of small- to medium-size businesses. It comes with eight high-power modules that may be used individually, or fully integrated for absolute maximum accounting efficiency:

- General Ledger
- Accounts Receivable
- Accounts Payable
- Invoicing
- Inventory
- Payroll
- Fixed Assets
- Job Cost

And Peachtree Complete II is designed using the latest software innovations, like full-color scrolling reference tables, pop-up windows, and short-cut keyed menus. We've

increased numeric capacities as high as \$999,999,999.99 in key areas, added Service Invoicing, included Range Printing, and expanded to allow an unlimited number of companies.

Error handling is quick and easy, with plain English messages and suggestions. Context-sensitive Smart HELP is on-line, all the time. And as always, Peachtree Complete II comes with the most thorough documentation—a separate quick-start Installation Guide, Accounting Primer, seven-volume Reference Library, and extensive on-line tutorials on each module—all at no extra charge.

Save Even More on Peachtree Data Query II. So while you're getting

the best deal on the best accounting software, why not get an even better bargain? Extend the power of your Peachtree accounting to include the most advanced custom reporting and analysis with PDQ II, and when you buy both, save \$100!

PDQ II lets you turn raw figures into highly sophisticated reports, allowing you full access to the important accounting data in your Peachtree Complete II files. From the simplest mailing labels to the most detailed budget analyses, Peachtree Data Query II opens up the potential of your computerized accounting, with no risk to your files, and no re-keying of accounting data.

And now, PDQ is easier than ever to use, with all new user instructions and on-line practice sessions that lead you through the system and build confidence as you go.

Choose from PDQ's own pre-defined reports, design your own (and

store the formats for future use), even export data to popular applications like dBASE III® and Lotus 1-2-3®. PDQ's simple, clear approach to report writing allows maximum control and flexibility. You can begin creating reports with PDQ in just minutes. And as you continue using it, PDQ can perform highly complex, intricate analyses.

Save a Bundle When You Buy Both. We think using PDQ to make Peachtree Complete II more than an accounting system makes good business sense. So we bundled them

together and made it well worth your while. For a limited time, Peachtree's "Double Bonus Bundle" is available for just \$298. That's two regularly-priced \$199 packages for one low price, and that's a savings of \$100. The "Double Bonus Bundle" is a limited-time offer, so call today!

And of course, if all you need is the best accounting package your money can buy, Peachtree Complete II by itself is still only \$199.

Money Back Guarantee. As with

all our products, we stand behind Peachtree Complete II and PDQ II with a toll-free hotline for technical support (\$1 per minute, \$20 minimum on your credit card). And both are covered with a 30-day money-back guarantee when you buy directly from Peachtree. If for any reason you're not satisfied, you can return the product within 30 days for a prompt refund. That's the Peachtree Software promise. (A \$25 restocking fee applies to all returns.)

Hardware Specifications: Requires PC/MS-DOS version 2.0 or higher with 384K of usable memory (512K required with DOS 3.3) and a minimum 10 MB hard disk. For use with the IBM® PC, PC XT, PC AT, Personal System/2™ and compatibles. 3 1/2" media optionally available. Not copy protected.

Compare Feature for Feature

General Ledger

- Chart of Accounts includes 76 suggested and 26,000 user-defined accounts.
- Financial statement comparisons may include current period and year-to-date with budget and/or prior period comparison.

Accounts Receivable/Invoicing

- Maintains open item or balance forward customers.
- Up to 14,400 customers.

Accounts Payable

- Partial payments of invoices.
- Up to 14,400 vendors.
- Checks printed with unlimited invoice listing on stub.

Inventory

- Supports average, last purchased and standard costing methods.
- Up to 19,500 inventory items (SKUs).

Fixed Assets

- Handles 13,000 assets and 13 methods of depreciation.

Job Cost

- Tracks costs and profitability on a job-by-job basis.

Payroll

- Built-in current year federal, state, city and county tax tables for all 50 states with automatic calculation capabilities.
- Automatic payroll processing supporting hourly, salaried, commission or draw-against-commission pay types.
- Printed and magnetic media W-2s generated automatically.
- Processes up to 3,900 employees.

And Many More!

should be written on the monitor. Consumers can call 800/524-1302 to obtain the name of the nearest authorized service center. Alternatively, consumers can request service from the factory service centers in Saddlebrook or Rancho Dominguez, but they must call for a return merchandise authorization number before sending in the merchandise for repair. Reeves adds that consumers must keep the original sales receipt to obtain warranty service; the warranty card alone is not enough.

But that's not the end of the story. Monitors are also sold by Samsung Electron Devices, another independent division in La Mirada, California. These monitors bear the Samtron la-

bel. The number for warranty information is 714/522-1282.

It's no wonder Mr. Desai had problems. Five months after writing to Consumer Watch, he finally received a refund for his monitor from SEA, as well as compensation for his telephone expenses.

No-Frills Mail Order

On February 3 I placed an order by mail with Telemart, expecting a three-week delay while my check cleared. On February 23 I called to check the status of my order and was told there was no record of it. I assumed that the order had been lost, so I placed a second order, prepaid by cashier's check to eliminate further delay.

Then I received my canceled check from the bank for the

"lost" order. I called Telemart and was told that my original order had actually been processed on February 10. When I asked that my second order be stopped, I was told that my original order wouldn't ship until March 7. By March 2, my cashier's check still hadn't been returned.

On March 4, thoroughly disgusted by the entire affair, I decided to cancel the order. I was told I would be charged a 15 percent restocking fee, even though this fee isn't listed anywhere in Telemart's ads or on its invoices.

Brian Clark

Circle 179 on reader service card

You'll recognize the page on the bottom as the one printed on the HP LaserJet Series II™ — the industry standard for laser printing.

Notice that the page on top looks remarkably similar. In fact, it's identical right down to the HP typeface.

But it was printed on the Acer LP-76™ — the only actual 100% HP-compatible laser printer available. With all six resident fonts and 21 optional font cartridges identical to those developed for HP.

Other laser printers talk about compatibility. But the Acer LP-76 is the first and only one to deliver true font compatibility with the HP LaserJet Series II. And that's very important. Especially when your office is producing large documents on multiple printers, and you want your fonts to look identical from page to page.

The Acer also duplicates such HP standards as 512K of memory. With 1, 2 and 4MB of memory expansion. Plus 300 DPI graphics, face-up and face-down output capabilities, and full access to any software that recognizes the Series II.

Of course, we stopped short of duplicating everything about the Series II.

For instance, the Acer LP-76 is faster, smaller, lighter and much less expensive.

So give us a call at (800) 538-1542 ext. 763. In California, (800) 782-1155 ext. 763. We'll quickly help you place our name with the right face.

Paul Farnell said that Clark's original order had been made under a business name, Clark Audio Design. However, according to Farnell, when Clark called to check on the order, the clerk was given the name Brian Clark and found no listing.

Farnell confirmed that the restocking fee is not listed in Tele-mart ads. "The reason we choose not to put that policy in our ads is that it implies we take items back," he says. "There are cases where if someone makes an error we'll take the item back. But if the order has already been processed or shipped, we charge a restocking fee to meet our costs." Farnell says that Clark's order had already been processed when he called to cancel.

Logicsoft Goes Under

MSC International and five subsidiaries, including mail-order companies Logicsoft, Micro to Go, and Moneysworth, filed for Chapter 11 bankruptcy reorganization on June 6, 1988.

The company names and case numbers are as follows: MSC International Inc., d/b/a MSC Federal Micro Services, formerly MSC Measurement Sciences Corp., case no. 088-80516-21; Print 360 Inc., case no. 088-80517-21; Logiclabs Inc., d/b/a Fast Computer Co., case no. 088-80518-21; Micro to Go Inc., case no. 088-80519-21; Moneysworth Computer Products Inc., case no. 088-80520-21; and Logicsoft Inc., case no. 088-80521-21.

Consumers with claims against any of these companies should file a proof-of-claim form

with the U.S. Bankruptcy Court, Eastern District of New York, 601 Veterans Memorial Hwy., Hauppauge, NY 11788; 516/361-8601. At press time, the filing deadline had not been set.

What's My Line?

In August, *Consumer Watch* reported that mail-order company SupplyLine in Lombard, Illinois, showed no signs of being in business. That company should not be confused with Supply Line in Claremont, California, which is very much alive. Writes company vice president Mike Bivens:

"Many people who tried to reach SupplyLine in Illinois obtained our 800 number and have become our customers. But please let your readers know that we're a

A Positive Point About Breast Cancer.

Now we can see it before you can feel it. When it's no bigger than the dot on this page.

And when it's 90% curable. With the best chance of saving the breast.

The trick is catching it early. And that's exactly what a mammogram can do.

A mammogram is a simple x-ray that's simply the best news yet for detecting breast cancer. And saving lives.

If you're over 35, ask your doctor about mammography.

Give yourself the chance of a lifetime.™

EASYFLOW

An on-screen flowchart processor that knows about flowcharts - not just another "screen draw" program that makes you do most of the work. *EASYFLOW* is a powerful full-screen graphics program dedicated to flowcharts and organization charts. With it you can quickly compose charts. More important, you can easily modify charts so they are always up to date.

- ▶ **Automatic:** Fully automatic text centering within shapes, both horizontally and vertically. Fully automatic line routing & re-routing.
- ▶ **Fast:** Written in assembly language for speed.
- ▶ **Large:** Charts up to 417 columns wide by 225 lines high. Chart too large for your printer? *EASYFLOW* automatically breaks the chart up & prints it in page size pieces.
- ▶ **Standard:** All standard flowcharting shapes included. Custom shapes can be ordered.
- ▶ **User friendly:** Don't take our word for it. PC Magazine says "*EASYFLOW* lives up to its name. It's hard to imagine any easier and more flexible way to produce basic and even complex flowcharts". [March 10th 1987 issue, page 278.]
- ▶ **Mouse:** Optional but fully supported.
- ▶ **It prints:** On most popular matrix printers including IBM, Epson, Toshiba, HP LaserJet, LaserJet-Plus and many others.
- ▶ **It plots:** On HP7440, 7475, 7550, 7570, 7585B and compatible plotters.
- ▶ **It works:** We are contractually prevented from mentioning the name of the "big eight" accounting firm that purchased a world-wide site license, but we can tell you that they spent months evaluating all available flowcharting packages before choosing *EASYFLOW*.
- ▶ **Rush delivery:** Order by noon today (eastern time) and you'll have it tomorrow. Rush delivery charge is \$10.50 (instead of \$2.00) and is available only to continental USA and Canada.
- ▶ **Documented:** 100 page manual plus over 150 screens of context sensitive help.

EASYFLOW works on IBM PC's, IBM PS/2 and compatibles. Requires 384 K memory, DOS 2.0 or higher and an IBM CGA/EGA/VGA or Hercules monochrome compatible adapter card.

Order direct for only **\$149.95** + \$2.00 S&H (USA/Canada), \$10.00 (foreign). Payment by M.O., cheque, VISA, Mastercard or Company PO.

The chart fragment above was produced on an HP LaserJet-Plus and is actual size and unretouched. Publication quality charts like this can be produced using only minutes of preparation time and seconds of print time.

Where does PC WORLD

Answer: to NSTL — America's leading computer

If you need the highest level of comparative data... NSTL's PC Digest is the solution.

Last year, *PC World* designated National Software Testing Laboratories as its official research facility. And for good reason.

NSTL is the leading independent research organization exclusively devoted to testing PC hardware and software. Our knowledge, experience and skilled technical staff enable us to generate analytical data so accurate, comprehensive and meaningful that no one else can match it.

PC Digest is our comparative ratings report on IBM-compatible PCs and peripherals. It's the *authoritative* source for objective, scientific hardware evaluations.

Granted, this unusual publication is not for everyone. But if you need to go *beyond* the ads and the reviews...if you require a *deeper level of analysis*...if your work calls for *complete* and *systematic* data to guide your buying decisions...then *PC Digest* is the only place to turn.

The ultimate hardware reference tool.

Today, the PC marketplace is more crowded and confused than *ever* before.

PC Digest evaluates a wide range of PCs and peripherals.

How can you be *certain* a piece of equipment will prove reliable? That it will do all it claims? That it will be compatible with your existing system? How can you make truly *informed* buying decisions?

There's only one *sure* way to evaluate the hundreds of competitive products. They must be *tested*. Head-to-head. Feature by feature. Against precise, scientific benchmarks. Performing real-world business tasks.

Only *PC Digest* performs this exacting research process. There is no other resource that even comes close.

Every major PC and peripheral is evaluated.

New equipment is a major investment. And, for most organizations, buying PCs and peripherals is a *continuous* process — not a one-time event.

Skilled engineers spend weeks methodically testing each piece of equipment.

PC Digest can help you make the *right* decisions — and *avoid* expensive mistakes. Arriving each month, it's an *ongoing* reference source for a wide range of products. For example:

✓IBM and compatible 286 and 386 machines ✓Laptops ✓Modems ✓Laser printers ✓Backup systems ✓VGA boards ✓Monitors ✓Network adapters ✓Memory expansion cards ✓Disk drives ✓Hard disk cards ✓Other mass storage devices ✓Accelerator boards ✓Dot-matrix printers ✓Co-processors ✓Scanners ✓And more

For each product, we determine: How easy is it to set up? What are its features and capabilities? What special system requirements are necessary? How well does it work with major business software? How fast does it perform typical tasks? How good is the documentation? How does it function under DOS and OS/2?

We tell you which products are *best* — and which have *problems*. And we make *specific recommendations* based on the hard data our tests uncover. (Specifications and prices are included.)

Users applaud *PC Digest's* graphic format. Test results are clear, readable and

accessible. Quick-reading charts show how products stack up against each other.

Benchmark test results show how each product scored while running major business software programs.

Couldn't the concrete, research-based data supplied *only* by *PC Digest* help you improve your product selection decisions — and save you time, money and hassles?

Objective, scientific testing standards.

Why is *PC Digest* so widely used — and so highly regarded?

For a start, no one else can equal NSTL's resources. Our laboratory facilities are state-of-the-art. Our staff of skilled engineers and technicians draws upon a wealth of "hands-on" experience that can be gained only by scientifically testing PC products day after day.

PC World announces an innovative partnership.

PC World has entered into an unprecedented arrangement to have our review process conducted by National Software Testing Laboratories.... NSTL has the reputation for undertaking the most comprehensive performance and versatility tests of software and hardware products in our industry....They're going to *tell* it like it is — not *sell* it like it is.

— **David Bunnell**, Chairman

We've recognized the increasing need for performance testing that measures products from a real-world perspective....That's why we have selected National Software Testing Laboratories of Philadelphia, Pa. as the exclusive test facility for all products reviewed in *PC World*.

— **Richard Landry**, Editor

PC World is proud to include benchmarks and evaluations from the industry's leading source of unbiased product information....NSTL has earned a reputation as the Underwriters Laboratories of the PC industry. Renowned for its exacting, objective methodology, [its] solid reputation has been built by a staff as fastidious as a team of wary tax auditors.

— **Eric Knorr**, Senior Associate Editor

go to test equipment?

testing lab.

Performance tests are *applications-based*. We test machines with popular software such as the major spreadsheet and database programs. In contrast, many magazine reviews use misleading "raw processing" benchmarks that bear little relation to real-world business tasks. And the loose-leaf data services, despite their imposing appearance, perform *no* testing at all.

PC Digest is fiercely independent. We have a firm policy of accepting *no ads*. That gives us the freedom to be *fully objective and unbiased* in our product evaluations.

Without vested interests of any kind, we can be *totally* impartial. We're free to print *exactly* what our tests reveal — and we don't pull our punches.

Monthly "Buyer's Alert" keeps you on top.

Selecting equipment is a never-ending process. That's why *PC Digest* monitors the fast-changing PC marketplace on an *ongoing* basis. It keeps you a jump *ahead* of events.

So it's not surprising that *PC Digest* frequently "scoops" the computer industry press. With the *first* comprehensive benchmark tests of IBM's PS/2 line. The *first* tests of the Compaq and IBM 25MHz PCs. And the *first* tests of OS/2's multitasking abilities.

PostScript Laser Printers

SPECIFICATIONS
Price
 \$5,495
Date First Shipped
 June 1987
Memory Included
 2MB expandable to 3MB (Extended Memory Option Kit, \$399)
Marking Engine
 Manufacturer: Canon SX
 Life expectancy: 200,000 or 5 years
 PostScript version: 47.0
 Imaging method: Direct positive exposure
 Recommended toner cartridge: Canon (5,000 sheets)
Paper Requirements
 Sizes: Letter, legal, A4, B5, envelopes, labels, film
 Weights: 35# maximum

PRODUCT RATINGS

Each product receives its own detailed report.

New changes and pressures ahead! Will you be ready?

Warning! The personal computing environment is moving *faster*. The pressures will intensify. Will you be prepared?

Technology is proliferating at dizzying speed. Networking is reshaping the way business functions. The 386 systems and OS/2 will create tough new price/performance decisions.

Expect more competing vendor claims and more hype. New compatibility problems. Product shortages and price increases. In sum, more *confusion* than ever before!

The Master Ratings Chart on each issue's front cover provides at-a-glance comparative data on every product.

Today, with DP budgets tighter, with the new emphasis on documenting computer productivity and bottom-line payoff, every purchasing decision will have to be justified. *PC Digest* gives you the hard data you need to *confirm* your decisions, and *defend* them.

Thousands of DP managers, MIS directors, PC coordinators, small business owners and independent consultants subscribe to *PC Digest*. They read it, rely on it, and turn their well-thumbed back issues into an indispensable reference and purchasing tool.

Isn't it time you joined them — and armed yourself with the kind of vital intelligence you won't find *anywhere* else?

Prove it for yourself. Give us the word and we'll begin a no-risk introductory subscription.

HEADS UP, JAPAN.

Above you see the most ingenious printhead developed in years.

It's a new stored-energy head that uses less energy and delivers more speed than traditional ballistic printheads.

And according to *Infoworld**, delivers constantly superior print quality, with letter quality comparable to a laser.

You'll find this printhead, with its seven patents on design, materials, and production process, only on Mannesmann Tally's newest family of printers. Including the 24-needle MT330 word processing printer, a 10,000 page-per-month, 300 cps printer. And

the 18-needle MT340 data processing and industrial graphics printer, a 13,000 page-per-month, 400 cps machine.

We invite you to compare either of these heavy-duty printers to their Japanese counterparts.

Because head to head, we win.

And body to body? Again from *Infoworld*: "...most plastic and metal components appear quite a bit sturdier than their Japanese equivalents."

Again, bad news for Japan. But very good news for you.

To take advantage of this news at a pleasantly surprising

price, call the number below for the name of your nearest dealer.

peripherals**

The Upgrade Product of the Year
and extra slots for the PC

*Robert
Luhn*

Magical Memory Management for the 80286

Hyperbole is hardly new in the PC marketplace, especially when it comes to upgrade products. Companies are always claiming that their upgrades "triple your processing speed" or "turn the XT into a multiuser system," so naturally I approached the All Chargecard with some skepticism. After all, All Computer Inc. claims its little memory-management board allows the 80286 to directly access up to 16MB of EMS 4.0-compatible expanded memory.

A simple trick, you might think, until you consider the implications. Ease this tiny board between an 80286 chip and its motherboard socket, and your

system can use any combination (up to 16MB) of expanded and extended memory as expanded memory. You also won't have to disable motherboard RAM to get the full benefits of multitasking programs such as *Desqview*. Better still, the Chargecard can access the memory addresses between 640K and 1MB, effectively boosting user RAM to 960K. The Chargecard even lets you run *PC-MOS/386*.

The company also throws in a RAM disk program designed to retain its data when the system is rebooted, plus a passel of memory-mapping and -management utilities. All this and a 5-year warranty for only \$399.

The biggest shock of all? The Chargecard actually works as claimed. What other product es-
(continues)

JERRY SPAGNOLI

Installing a Chargecard can take three steps. Plug the 80286 into the Chargecard, slip the dual into the socket extender, and then push the assembly into the waiting motherboard socket.

entially doubles your system's conventional work space for those mega-worksheets, data bases, and documents or those crucial but RAM-hungry memory-resident programs? What other board lets *Desqview* use *all* installed memory for multitasking applications? If you own an 80286-based system (including the PS/2 Models 50 and 60), the Chargecard is a must buy.

Just keep in mind that the Chargecard can be difficult to install. The process basically involves removing the system's 80286 chip, plugging it into the Chargecard, and then plugging the assembly back into the 80286 socket. Unfortunately, the microprocessor socket in many systems—including the IBM PC AT Model 339 upgraded here—is surrounded by capacitors. Try to push the Chargecard flush into the socket, as directed, and you'll mash the capacitors and possibly disable the motherboard. Another complication: One of the plastic feet that secure the motherboard to the system chassis prevents the Chargecard from snapping into place.

There are two solutions to these knotty problems. Upgraders on a budget can remove the motherboard, pull out the obstreperous plastic foot, *gently* bend the capacitors away from the 2½-by-1½-inch Chargecard, force the Chargecard into the 80286's socket, and reinstall the motherboard. (For tips on removing a motherboard, see "The Ultimate Turbo Board," *The Upgrade Path*, PCW, November 1987.) A simpler, albeit more expensive, remedy is to buy the company's \$100 socket extender. (You may need this adapter anyway if your system's 80286 is

planted on the motherboard in a leadless chip mount.) However, since this raises the Chargecard another quarter-inch off the motherboard, you'll probably have to relocate the system's disk controller to another 16-bit slot. Tools of the upgrade: small flat-blade and Phillips screwdrivers, an 80286 chip puller (supplied by the company), and a pair of needle-nose pliers (for removing the plastic foot).

Before you wrangle with the Chargecard, reconfigure all expanded memory boards as extended memory, and run the computer's setup program to record the change. Then park the AT's hard disk, turn off the system, unplug all external cables, remove the system cover, and ground yourself before touching the system or any component.

Locate the 80286 chip (just behind and to the left of the hard disk drive in an IBM AT), swivel the computer so the disk drives are to your right, and remove any boards that obstruct your view. Slide the chip puller's prongs between the 80286 and its socket, and lift up gently. Repeat the procedure on at least one other side of the chip (it may be impossible to get at all four sides) and the chip should ease out. Note: Remember what direction the notch on the 80286 is facing—you'll need this information later. Take the Chargecard out of its antistatic bag and plug the 80286 into the socket on the card. The chip should be firmly socketed but not necessarily flush to the board.

Install the Chargecard as if you were reinstalling the 80286—as you lower the Chargecard's pins into the empty 80286 socket, make sure the 80286's notch is pointing in the proper direction.

If you have trouble lining up the pins, shine a lamp on the motherboard and peek through the computer's backplane. Now survey the situation. Will pressing the Chargecard into the socket crush capacitors and other components in the immediate vicinity? Is one of the motherboard's feet getting in the way? If not, plug in the Chargecard. It needn't be perfectly flush in the socket, but pretty darn close. If there are obstructions, either use All Computer's socket extender or remove the motherboard and follow the procedure outlined previously.

Once the Chargecard is in place, reassemble the system and turn it on. You'll discover that the Chargecard's considerable powers aren't available until you install device drivers that specifically tap each talent. Thankfully, the company supplies a prompt-driven installation program that copies over the necessary drivers (for expanded memory, the RAM disk, and accessing 960K of user RAM) and modifies or creates AUTOEXEC.BAT and CONFIG.SYS files. The process is straightforward, and if you dig around the Chargecard's somewhat muddled user manual you'll discover hundreds of tips for tweaking the system.

The Chargecard isn't perfect. It can be a pain to install and its drivers can soak up 64K of RAM. Note, too, that the company's RAM disk program has a bug that prevents it from retaining its contents when the system is rebooted. The manufacturer also notes that the Chargecard won't work in the AT&T 6300 Plus, Zenith Z-248/12, and 80286
(continues)

Software Breakthrough: the RANDOM information processor

New Concept

With all the software tools available, it is surprising that an important need has been overlooked—a way to deal with the countless bits of RANDOM information you spend hours with every day. Tornado will not only give you instant access to this important information ... it will help you make better decisions and even think more clearly. Try Tornado risk-free and discover the productivity software package for your PC that works wonders.

TORNADO™

ONLY \$99.95!

45-DAY MONEY-BACK GUARANTEE

Information Windows

With Tornado, you process information in stacks of superfast "intelligent" windows—several on your screen at once. You type into the windows; interconnect and prioritize them; and scan through them in remarkable ways.

Free Form

Tornado is FREE-FORM. It works the way you think. To start a new window you just press N, and enter information. No file names. No extra keystrokes. To retrieve information you just press G (for Get), with any word or phrase—you'll watch Tornado zip through your windows like lightning linking and opening those requested. You can even flip through your windows with the arrow keys and watch them instantly pile up and lift away. These are just three of 18 easy but powerful features.

Countless Uses

There are thousands of uses for Tornado. When Harry calls you on the phone, in two seconds flat you'll display the six windows on Harry before he finishes his first sentence! No more embarrassing pauses or scrambling for information. Tornado is so versatile you can write and print a letter faster than ever; track things to do; edit electronic mail; and plan a project or event—quickly and easily. You can even build a sophisticated "knowledge" base or an unstructured data base without programming. And that's not all. Track phone conversations, numbers, customers, and all your other RANDOM information. On a

portable, Tornado is your ideal moving office. Best of all, you tailor Tornado to your own needs—easily!

25,000 Windows

Instead of one window or ten, imagine up to 25,000! It's like extra memory...for your brain! The uses are endless. If you can "type" it—you can "Tornado" it. And because it's memory resident (if you choose) you can quickly jump in from other programs—even move information between them. All this power, yet reviewers agree you can start "Tornado-ing" in 15 minutes—not 15 days.

RANDOM Information

Did you ever realize that over half the information you deal with every day is the RANDOM type? Not databases—not spreadsheets—not long documents—but the information scattered around your workplace and in your head. Yet amazingly, until now there was no great software to help you—the tools were either too structured or without organization. But now, at last, there is a quick and easy solution—Tornado—acclaimed by rave reviews and accepted by corporations nationwide. Whether you are a business executive, consultant, engineer, or in any other profession, you need Tornado—it will save you endless time and effort every day—guaranteed—or your money back. Here is how it works:

Specifications: FEATURES: free-form & predefined windows, scrolling within window, import & export to files & screens, cut & paste, auto word wrap, time & date stamp, move & join & dup windows, mono or selectable color, definable Hot-key or non-resident, unloadable, LAN support, context help, extended ASCII, smart fully adjustable windows, parallel text processing, progressive resolution and "and-or-not" like searching without keywords, and more. COMPATIBILITY: IBM-PC/XT/AT/PS2 and compatibles; mono, CGA, 80 col EGA, and Hercules displays; 60K minimum RAM. CAPACITY: Up to 500 windows and 50K per pile - 50 piles. Not copy protected.

One PC, Two Buses

Back in the early 1980s when the PC was new, expansion boards generally boasted a single option, such as a serial port, RAM, or video circuitry. As you might imagine (or remember), it didn't take long to fill up the PC's five slots. Today, with the availability of cheap internal modems, expanded memory boards, graphics boards, and the like, slot cram hasn't abated. The solution—now, as then—is to connect an expansion box with extra slots to your PC.

This may strike some as a fuddy-duddy upgrade, but it's incredibly easy to accomplish. If you're one of the many millions who rely on a faithful PC, XT, or compatible system that's out of

slots, consider the merits of the PC-Xtra from PC Horizons. The company has crafted a 6-slot box about half the size of the PC that closely resembles its inspiration—from its beige paint job to its noisy fan and impossible-to-remove cover. You can put any board in the PC-Xtra except a color graphics board; the unit's 50-watt power supply will keep things humming. Connecting the PC-Xtra to your PC takes about 5 minutes and requires small flat-head and Phillips screwdrivers.

As always, park the PC's hard disk if it has one, turn off the system, unplug all external cables, remove the system cover, and ground yourself before touching the system or any component. Place the PC-Xtra to the left of the PC and remove its cover. Don't yank the cover off or you could snag cables or damage the unit's power supply. The gray data cable that connects the PC-Xtra to the PC is inside the unit, plugged into a slot; pull the white connector out of the slot and poke it through the PC-Xtra's backplane. (*Don't* remove the other end of the cable that's attached to the PC-Xtra's motherboard.) Install any expansion boards in the PC-Xtra, put the hood back on, and screw it down.

Now find a free slot in the PC (or remove an existing board), remove its slot cover, fold the connector end of the data cable over into a triangular shape, and slip it through the backplane. When you plug the PC-Xtra connector into the slot, make sure the black stripe on the edge of the data cable is nearest the PC's backplane. At this point the manual directs you to put the slot cover back in place, but the PC-Xtra's data cable clearly

makes that impossible. No matter—the opening is effectively closed off.

Before you reassemble the PC, reset its DIP switches to reflect any new devices added to the PC-Xtra. If you're merely moving boards from PC to PC-Xtra, you can leave the DIP switches alone.

You won't need to hunt down a wall socket to power the PC-Xtra, thanks to its unique double-headed plug. One head plugs into the monitor's power outlet on the back of the PC; the other head connects to the monitor's power cable. Turn on the PC, and both units are up and running.

Simple, direct, and quick—the best kind of upgrade. If PC Horizons cut the PC-Xtra's price in half—a reasonable request, given the simplicity of the product—it would be the perfect upgrade. But the PC-Xtra does the job and that may well be worth the price of admission.

The evolution of WordPerfect.

And it requires users who appreciate it. Loyal users who call with questions and suggestions.

In the case of WordPerfect word processing, we're fortunate to have both exceptional product designers and users. So fortunate, in fact, that we've produced the number-one selling word processor for two years running.

From a good idea, a great product can evolve. But it takes people with vision who can nurture and refine it.

We think it's because we listen to our users, and we respond with products that reflect their needs. And by doing more of the same—by *practicing* what we know best—we'll continue to make WordPerfect the leader in sales, service and customer satisfaction.

For more information, write to WordPerfect Corporation, 1555 North Technology Way, Orem, Utah 84057. Or call (801) 225-5000. (In Canada, call 1-800-267-2499.)

THE HELP SCREEN

PC World offers answers and advice at every level

Back off to back up, untangle a twisted definition, make cents of an IBM keyboard, fight .BAK fragmentation, find the disk with DEBUG, locate a rack-mounted PC, and recognize when to clean your floppy drive's heads.

**Karl
Koessel**

At the End of My Tape

Q. *I'm the office manager for a small private dental practice. I've been using an AT for four years to track appointments and billings. The AT is equipped with an Alloy tape unit, which we use every night to perform a full backup of the hard disk files.*

When the hard disk died three weeks ago, having the backup tape was a blessing; I simply restored the files from the tape to the replacement drive and was immediately up and running. Now, however, the tape drive isn't working. No matter what I choose from the backup menu, the tape drive's backup program tells me that no files were found on the hard disk and so none were backed up. But I know the hard disk has lots of files. What's wrong? Do I need a new tape backup unit?

By the way, the guy who maintains our system just added something that makes the time of day tick away in the upper right corner of the screen. I find it terribly annoying. Can you tell me how to get rid of it?

*Kathy May
San Francisco, California*

A. I'll bet your tape backup quit working the day your maintenance person added that clock. The technical explanation is that the clock and tape programs are trying to use the same DMA (direct memory access) channel. In lay terms, your system is try-

ing—and failing—to do two chores at a time.

Since you don't need the clock while you're backing up, you could make a bootable disk for drive A: and use it to boot the AT when you want to back up. Booting off the floppy disk will prevent the memory-resident clock program from installing and conflicting with the tape backup program. However, since you don't want the clock anyway, let's take out the command that installs it.

Use your word processor's nondocument (also called ASCII text) mode to edit the AUTOEXEC.BAT file found in the root directory of the hard disk. Look for the line that refers to the clock program (if it's not obvious which line it is, call your maintenance person) and delete it. Then save AUTOEXEC.BAT as an unformatted ASCII text file and reboot the AT. The clock should no longer appear on your screen, and the tape backup program should work as it always has.

Twisted Pair

Q. *I want to install a small network at the office. It calls for twisted wire to connect the computers. Why is twisted wire needed? Would speaker cable or doorbell wire work as well? (Doorbell wire is often solid, with two wires running parallel inside a sheath.)*

*Henry Hilliard, Jr.
Houston, Texas
(continues)*

A. Your network calls for twist-ed-pair wiring, not twisted wires. Twisted-pair wiring is two wires that twist around each other inside their common sheath. Twisted-pair connections are less susceptible to electromagnetic interference, which can damage the data packets that are sent around the network, than parallel-wired links. Fewer damaged packets means fewer packets that must be retransmitted, and therefore better performance from the network.

However, the length of the wire and the transmission speed of the network also affect the frequency of damaged packets. Many small networks have nodes fairly close together and transmit slowly enough that parallel wiring, like speaker or doorbell wire, works just fine. In fact, many small-network cards use standard (parallel) phone line to connect nodes.

Cents, You've Been Gone

Q. *I've been using IBM and Compaq PCs since they were first marketed, but I can't find any manual, magazine, book, or person who can tell me why the cent symbol (¢) was omitted from the PC's keyboard. Any clues?*

Rodney Wren

Summerfield, Florida

A. When the IBM PC was introduced, ANSI's ASCII (the American National Standards Institute's American Standard Code for Information Interchange) had already been adopted by most microcomputer hardware and software companies. IBM followed suit with its PC. Unfortunately, ¢ was not part of

ASCII code	Character	ASCII code	Character	ASCII code	Character	ASCII code	Character

TABLE 1: The IBM PC's extended ASCII characters

the ASCII definition, and printers either could not print that character or required a special code to produce the cent sign.

Since ASCII is a 7-bit standard, only 128 (2⁷) characters and control codes (tabs, carriage returns, and codes for clearing the screen, moving the printer carriage one line, and so forth) can be specified. Because the IBM PC is a full 8-bit machine, IBM decided to extend the ASCII character set with 128 additional special characters or codes, one of which is ¢ (see TABLE 1). These days, most IBM PC-

compatible programs and printers accept, display, and print the IBM PC's extended ASCII character set.

To enter ¢, hold down the <Alt> key, enter 155 on the numeric keypad, and then release <Alt>. (You can use the same technique to enter any of the characters in TABLE 1.) Then try printing it. If you don't get a ¢, don't give up immediately. It may be that your printer has more than one character set and that the IBM set is not the de-
(continues)

DO THE TWIST!

Introducing Artline.™

The Graphics Illustrator That Manipulates Type Down To The Letter.

Twist it! Turn it! Anyway you want it. With Artline, you can produce high-quality text effects and original graphics you never thought possible. All on your PC!

Choose a typeface, draw free-hand, trace an image. Then take your graphic design even further. Scale it, rotate it, color it, pattern it, mirror it, copy it...well, you get the picture.

You can partner Artline with GEM®

Desktop Publisher®, Xerox® Ventura Publisher® and Aldus® PageMaker® for logos, headlines and illustrations. And it'll work with almost any printer.

Artline. The ideal design tool for the most innovative, high-quality text and graphics. It's revolutionary. In every sense of the word.

For more information, contact your nearest dealer or call (800) 443-4200.

All artwork shown was created using Artline.

Circle 266 on reader service card

fault. Check your printer's manual for available character sets and the instructions for invoking them. For example, the IBM PC's character set can be made the default on all current Epson printers by setting a DIP switch (or by pushing front panel buttons for the switchless models) or by sending the printer an Escape t1 Escape 6 (the ASCII sequence, in decimal, 27, 116, 49, 27, 54).

Unwanted .BAK Files

Q. *I have a problem with Webster's New World Writer. For a professional word burner like me, with dozens of novels, short stories, and articles in various stages of completion, this word processor is great, mostly because of its excellent thesaurus and spelling checker.*

Unfortunately, whenever a file is edited, Webster's insists on making a .BAK file out of the original. This action rapidly fragments my hard disk. I use FastTrax regularly to clean things up, but there is the ever-present dread of risking a chapter or more if something goes wrong.

Simon & Schuster insists that I can't eliminate this unwanted feature and suggests that I use a batch file to automatically delete the unwanted .BAK files. I didn't need this simplistic solution, and it doesn't solve the fragmentation problem anyway.

I could change word processors. Borland's Sprint sounds like it might be the one I'd be most comfortable with, but I'd still need to use Webster's to check spelling. I shudder every

time I think of having to use two word processors. Can you help me?

*John A. Nelson
Guerneville, California*

A. Two things first: *Sprint* has a spelling checker (see *The Software Shelf* in this issue), so if you opt for *Sprint*, you won't have to use Webster's too. Furthermore, because disk file allocation is a function of DOS, your files would get fragmented even if your word processor didn't make .BAK files.

That said, there are a few things you can do to reduce the amount of disk fragmentation. You can implement a RAM disk that's a little bigger than three times the size of the largest document you'll save (see VDISK.SYS in the DOS manual's chapter called "Configuring Your System"). (Webster's, like most word processors, creates a temporary copy of the file while you're editing, removing it only after the original has been renamed with the .BAK extension and the new edit has been saved. Therefore, you need space for all three files.) If your system has extended memory, producing a large enough RAM disk should not be a problem. (If you have an expanded memory board, you'll have to use the RAM disk program that came with it—if one did. Better yet, if you can configure some of that expanded memory as extended memory, do so and use VDISK.SYS for the RAM disk.) Otherwise, VDISK will use conventional RAM; hopefully your system has a full 640K worth. Once you've installed a RAM disk, you'll want to tell your word processing program that your document files are on that drive.

Before editing a file, you'll need to copy it to the RAM disk. Then you can start editing as you normally do, by typing WWP followed by the file name. When done editing, save the document, exit the word processor, copy the newly saved file from the RAM disk to the hard drive, and delete the files in the RAM disk. (You may want to create a batch file that performs all four steps for you.) Because the .BAK file and the temporary file are not saved on your hard disk, fragmentation is reduced, though not eliminated.

If you don't have enough RAM to implement the RAM disk strategy, or you worry that a power failure or kicked power cord will cause the RAM disk to lose all of your last edit session, you can use FDISK from DOS 3.30 or a later version to create a small partition on your hard disk as drive D:. Then use the method just described, substituting the hard drive D: partition for the RAM disk.

Tracking Down DEBUG

Q. *I'm a newcomer to computers and could use some help. A recent utility in PC World was created using a program called DEBUG. I have MS-DOS 3.20 and want to purchase a compatible version of DEBUG. The article mentions that DEBUG can be found on the DOS Supplemental Programs disk of DOS versions prior to 3.30 but fails to mention where to buy that disk. Would you please tell me where I can obtain it?*

*Silas W. Downs
Columbus, Kansas

A. You already have it. The DOS Supplemental Programs disk is the second disk included in your package of MS-DOS.

Racking My Brain

Q. *I work for a broadband local area communications network. We provide a lot of state-of-the-art electronic communications and video equipment mounted in racks (standard 19-inch width) to various clients. Many require rack-mounted PCs for system monitoring, and so I'm looking for the right one. However, I can't seem to find a rack-mountable PC anywhere. Can you help?*

*Sharon Giudice
Lyons, Colorado*

A. Texas Microsystems offers a nickel-plated-steel 19-inch-wide rack-mount unit, 7 inches high by 22 inches deep. The Model 3014 is equipped with two 8-bit and twelve 8/16-bit slots, five half-height drive bays, two fans to ensure proper cooling, and a 225-watt power supply. The company offers various hard disks that in combination can give you more than 1 gigabyte of storage within the 3014. High reliability, industrial-grade (NEMA Type 12) rack-mounted monitors and portable disk and tape drives are also available.

The 3014 is a passive back-plane unit, meaning that there is no motherboard. Instead, you plug in a CPU card to run the system. Four CPU boards, which are based on Chips and Technologies chipsets and the Phoenix BIOS, are available. The B880, a 4.77-MHz 8088-based system board with 256K or 640K of on-

board memory, costs \$495 or \$595, respectively. The \$1295 B286-1 is a dual-speed (6/8-MHz or 6/10-MHz) 80286-based board with 1MB of on-board memory. The N286S/16-1 is a 16-MHz, near-one-wait-state 80286-based CPU board with 512K (expandable to 4MB on board) of RAM for \$1595. It includes a socket for a 10-MHz 80287 coprocessor. The 80386-based B386 is available in 16-MHz and 20-MHz versions and can be configured with up to 16MB of on-board 32-bit memory, with prices starting at \$1645 for a B386 with no memory installed.

The 3014 is inappropriate for general office use; it was designed for laboratory and clean-room environments. Generally sold to system integrators, the rack-mountable unit complements other Texas Microsystems products meant for the factory floor and ruggedized military applications. For example, the company recently introduced a solid-state "hard disk," the SSD, for environments where a hard drive can't be used. The SSD holds up to 20MB of battery-backed static RAM with an average access time of approximately .025ms.

Should repair ever be needed for any component of these solidly built systems, the company guarantees 48-hour turnaround time and will ship a replacement part if the device cannot be repaired within that time period.

WHERE TO BUY

Keep a Clean Head

Reading "Back on Track" from August's *Help Screen* reminded a few readers of their disk-reading problems. Dirty read/write heads are not the problem when a floppy drive can read its own disks but can't read a disk written by another drive; however, these readers felt I should mention that when a single drive has trouble reading disks, especially ones it wrote, the heads probably need cleaning. So done. Another reader noted that read problems also occur when the back of the monitor is too close to the disk drive of some systems.

To send correspondence or to submit material for publication in this column, please see How to Contact PC World, page 4. ●

POWER TIP NO. 20

Copy Two Files Into One

With the DOS COPY command, you can easily combine two ASCII files to create a third. For two files called List1 and List2, for example, just type COPY List1 + List2 List3. List3 will consist of List2 appended to the bottom of List1.

*Joseph Irwin
St. Paul, Minnesota*

Now there's a less complicated way to make a lasting impression with your documents.

Legend* gives you word processing, graphics and desktop publishing in one comprehensive program.

The old way of creating valuable business documents took an eternity.

Moving in and out of different programs for different functions was as slow as cutting stone. And the

results were often difficult to decipher.

A more civilized approach. Now, with Legend from NBI, you can produce compound documents with ease. Because Legend gives you and your IBM® 286/386 Personal Computer or compatible the power to process words, create graphics and lay out pages. All within the comforts of one extremely comprehensive software program. And all without paying a king's ransom.

The Microsoft® Windows environment's common set of commands coupled with Legend's WYSIWYG format make document processing less of a process. And if you still want more, it's yours. Because Legend can import practically everything from

scanned images and spreadsheets to Micrografx files.

Words and pictures. All in good form. Blending the right symbols with the right words can help a document stand the test of time.

That's not a new idea. But once you compare Legend to word processing and desktop publishing, you'll realize it's an idea whose time has come. Again.

Call 1-800-922-8828 (in Canada 1-800-668-8640), ext. 525, for more information or a \$9.95 evaluation disk of Legend.

Because the system you use to create your documents shouldn't be a relic of the past.

LEGEND

NBI®

Which PC business software and which will give you big

Now you can know for certain—with the unique comparative ratings resource

Every single day, a new business software package hits the market. Each claims to be "the best." But who's kidding whom?

How can you be sure a program will do all it claims? That it will meet your system requirements? That your people will be able to master it?

Shouldn't there be a place to turn for answers? An authoritative and objective resource that helps you make the right choices, so you can select exactly the programs that fit your needs?

There is. It's called *Software Digest*. It's the single, most trusted resource for impartial, systematic evaluations of IBM-compatible PC software.

"We've recognized the increasing need for performance testing that measures products from a real-world perspective...That's why we have selected National Software Testing Laboratories of Philadelphia, Pa. as the exclusive test facility for all products reviewed in *PC World*."

— Richard Landry, Editor, *PC World*

The ultimate software reference tool.

Software Digest is the ultimate reference source.

It's not for everyone. But if you need to go beyond the ads and the reviews...if you require a higher, deeper level of analysis...if your work calls for accurate, comprehensive, scientific evaluations...then this is the place to turn.

Software Digest has pioneered an original, exclusive methodology for evaluating

Side-by-side bar charts show how programs score on 5 key test criteria.

Each program is subjected to an exhaustive series of "hands-on" tests by typical computer users at all experience levels.

software. It combines technical testing with practical, "hands-on" sessions involving typical users at all experience levels.

Under these controlled conditions, we scrutinize each program, and compare all of them head-to-head. Each is tested not just once, but many times, under strict rules that ensure consistency and objectivity.

A systematic series of tests measures ease of learning, ease of use, error handling, versatility, performance and more.

The result is an absolutely unparalleled set of comparative ratings for a wide range of IBM-compatible PC software — including every major business application:

- ✓Spreadsheet programs
- ✓Databases (multi-user, relational, SQL and file managers)
- ✓Word processing (both simplified and advanced)
- ✓Project management
- ✓Business graphics
- ✓Free-form graphics
- ✓CAD
- ✓Communications
- ✓Accounting
- ✓Desktop publishing
- ✓Integrated programs
- ✓Backup systems
- ✓Local area network software
- ✓And more

Couldn't the concrete, research-based data supplied only by *Software Digest* help you improve your product selection decisions?

From *PC World*'s official research facility.

Software Digest has a firm policy of accepting no ads. We are 100% subscriber-supported. That gives us the freedom to be fully objective and unbiased in our product evaluations.

Without vested interests of any kind, we can be totally impartial. We're free to print exactly what our tests reveal — and we don't pull our punches. We tell the whole truth — and let the chips fall where they may.

Last year, *PC World* selected us as their official testing facility.

In a major editorial in the October 1987 issue, *PC World* Chairman David Bunnell commented: "NSTL has the reputation for undertaking the most comprehensive performance and versatility tests of hardware and software products in our industry... They're going to tell it like it is — not sell it like it is."

Monthly "Buyer's Alert" keeps you on top.

Another important plus: We monitor the fast-changing software marketplace for you on an ongoing basis.

Each issue of *Software Digest* includes *Buyer's Alert*. This useful monthly supplement covers program upgrades and enhancements, performance testing updates, previews of new products we're evaluating...and much more.

Each program receives its own detailed two-page report.

Users applaud *Software Digest*'s graphic format. Test results are clear, readable and accessible. You can see instantly how competing programs stack up against each other.

Perhaps most important, everything you need to know is in one place. So you don't have to plow through stacks of material searching for answers.

"*Software Digest* is the 'Consumer Reports' of software."

— Richard Concalldi, Djarborn Chemical Co., Lake Zurich, Ill.

How long would it take you and your staff to match this kind of research and analysis? How much would it cost?

Imagine the investment in time, money, effort, manpower! To test just one category of software for a typical issue of *Software Digest* requires 3,000 man-hours and an expenditure of \$50,000.

What gives you reliable answers before you buy!

That's why we say a subscription to *Software Digest* is like hiring a full-time team of software researchers — but at *far* less cost.

Warning! The personal computer environment is changing *faster* than *ever* before. The pressures will intensify. Will you be prepared?

“**Software Digest** is the one true source of unbiased evaluations. Ratings are comprehensive, factual and easily understood. Simplifies the selection process and reduces the time it takes.”

Right now, a new generation of software is evolving. New programs — and *changes* to existing programs — will appear at an accelerating pace. OS/2 will soon be baseline technology — and generate a host of new applications. The 386 machines will accelerate the proliferation of software choices.

Today, with DP budgets tighter, with the new emphasis on documenting computer productivity and bottom-line payoff, you'll be required to *justify* your purchasing decisions more than *ever* before.

Software Digest gives you the hard data you need to *confirm* your decisions, and *defend* them. You can make rational, *confident* judgments on the basis of *solid data*.

Which programs have the capabilities you want? Each feature is methodically verified by our technicians.

Thousands of DP managers, MIS directors, PC coordinators, small business owners and independent consultants rely on *Software Digest* to make the *right* choices, increase productivity, minimize risks.

Isn't it time you joined them — and armed yourself with the kind of vital intelligence you won't find *anywhere* else?

Master Ratings Chart on each issue's front cover compares every program at a glance.

Make no mistake: No other PC resource is as complete, as reliable, or as universally trusted as *Software Digest*. That's why we call it "the ultimate software reference tool."

Try it for yourself. Give us the word and we'll begin an introductory trial subscription.

With the stakes as high as they are today, just *one* correct software acquisition decision (or a *wrong* one you *avoid!*) could repay the cost many times over. In short, *Software Digest* can save you *time, money* and *hassles*.

“Good cost comparisons! Our accounting group was going to buy a \$1500 financial planning package. Your evaluations showed them a better package for only \$875.”

*"Carbon Copy Plus
makes training
a breeze and
saves us
hundreds of trips
to properties"*

Stephen L. Woolstenhulme,
Parkway Property Management,
Dallas, TX

Carbon Copy Plus can double your productivity—just ask our users!

"Like many other business professionals, I had a problem. How to expand my property management business and still keep overhead low and service quality high.

"I found the answer in Carbon Copy Plus, the leader in remote control software. By placing a PC with my property management software and Carbon Copy Plus at each property, I can remotely manage the maintenance, marketing and financial status of each rental unit. I train my on-site property managers, update policy and procedure manuals and integrate reports for property owners. And I do all of this reliably and with complete control—without having to leave my office!"

Be in two places—at one time!

Like Steve Woolstenhulme, thousands of satisfied users have turned to Carbon Copy

Plus. Working over ordinary phone lines and in conjunction with most PC application programs, Carbon Copy Plus links two PCs, including their keyboards, disks and screens. The linked PCs act as one, making it easy to give effective product demonstrations, support remote customers or train new users—at the touch of a key!

Join the Crowd

Call us today for more information. Ask us about Carbon Copy Plus' remote control capabilities. And don't forget our other communications features, including terminal emulation, file transfer, remote graphics support and much more. As Steve found out, it may be one of the most productive calls you'll ever make.

A global exchange of personal computer discoveries

Go wild with a Turbo C replacement for DEL, increase your AutoCAD comfort, simplify BASIC PRINTing, and check out three source-code analyzers.

Edited
by
Tom Swan

Oh, Those Wild Deletes

When using wild-card characters with the DOS commands DEL and ERASE to delete multiple files, you can easily erase more than you intend. For example, with the command DEL *.BAK, there's no way to delete only some files ending in .BAK. To DOS, wild-card file names like *.BAT or *.* are all-or-nothing affairs.

So I couldn't delete specific files without giving up wild cards, I wrote a Turbo C program, DELVER.C (see LISTING 1), for DELETE with VERIFY. Once you become familiar with DELVER, you may never use DEL/ERASE again.

As with DEL/ERASE, you can use DELVER to delete a single file (DELVER filename.ext) or to delete several files with similar names using a wild card specification, such as DELVER TEST???.*. But DELVER prompts you to answer Y before removing a file from disk. Press any other key, N or <Enter> for example, if you want to keep the file. DELVER will move on to the next file name.

Vincent D. O'Connor
Babbitt, Minnesota

Editor's note: To compile DELVER.C, start Turbo C and press <Alt>-E to place the cursor in the Turbo editor window. After entering the program text shown in LISTING 1, press <Alt>-C to open the Compile menu. Then, select Make to create

DELVER.EXE on disk. Quit Turbo C with <Alt>-X and copy DELVER.EXE to your disk's root directory or to any directory listed in your system's PATH command.

AutoCAD in Comfort

AutoCAD's numerous commands make the program difficult to use, especially if you don't have a mouse. For more comfortable CAD sessions, I use ANSI.SYS to assign my most frequently used commands to <Alt>-key combinations. For example, <Alt>-P issues Plot; <Alt>-S, Save; and so on.

A batch file, ACAD.BAT [LISTING 2], makes the key assignments and then runs AutoCAD. Each of the ANSI.SYS key definitions begins with PROMPT \$e[. Then come two numbers, each followed by a semicolon. The zero indicates an extended ASCII key such as a Function key, an <Alt>-key combination, <Insert>, <Cursor Up>, and so forth. The second number identifies the key [see TABLE 1]. For example, 0;37; is the code for <Alt>-K. [When defining a normal key, only one number, the key's ASCII code, is used.] Following the key code is the key's new definition, enclosed in double quotes. A single p ends the definition.

    exit (0);
}
```

LISTING 1: This Turbo C program, DELIVER.C, prompts you for verification before deleting files from a disk.

Editor's note: Before running ACAD.BAT, check that ANSI.SYS (from your DOS disk) is in the hard disk's \DOS directory and that CONFIG.SYS contains the line DEVICE=C:\DOS\ANSI.SYS. Whether or not you use AutoCAD, you can employ this same technique to add keyboard macros to other programs, but only if the software uses standard methods for reading the keyboard. Programs that access the keyboard directly may not recognize the ANSI.SYS key assignments.

You can also use this technique to create limited DOS macros. For example, I include the line PROMPT \$e[0;66; "Exit";13p in my AUTOEXEC.BAT file, assigning Exit plus <Enter> (ASCII 13) to <F8>. This lets me temporarily exit to DOS, as many current programs allow, and then press <F8> to quickly return to my work. Note that key definitions can contain a mix of quoted text and ASCII codes.

THE "DESKTOP PRESENTER PACK"

Everything you need for creating and giving presentations with your PC.

Now, you can make impressive, professional-quality, full-color presentations of any kind right at your desk with The DESKTOP PRESENTER PACK.

Everything you need is included: Colormetric® a high resolution graphics card for your PC, PictureIt™ business graphics software, and PCPrintmaker® desktop printing software.

With The DESKTOP PRESENTER PACK you will turn your personal computer into a full-capability workstation for creating professional-

quality presentations quickly and easily. Then use your PC to give a video presentation in 1000 colors.

Or make high resolution slides, overhead transparencies or hardcopy all in full-color by simply plugging in a SlideMaker® or color printer.

Buy the DESKTOP PRESENTER PACK and make the best presentation of your career.

LISTING 2: ACAD.BAT assigns frequently used commands to <Alt>-key combinations before running AutoCAD.

What You See

Is What You Print

In BASIC, it isn't always convenient to use PRINT and LPRINT to output text to the screen and the printer. For instance, while debugging, I often need to test printer output by temporarily changing LPRINT statements to PRINT, a tedious and time-consuming job when you have hundreds of such statements to edit.

Recently, I found a more convenient way to accomplish the

identical task: Use OPEN and PRINT # (instead of PRINT and LPRINT) for all output. With this method, the statement OPEN "LPT1:" FOR OUTPUT AS #FN directs PRINT # statements such as PRINT #FN, "ABCDEFGH" to the printer, in exactly the same way LPRINT does. Similarly, OPEN "SCRN:" FOR OUTPUT AS #FN directs output to the screen. The variable FN can be any number from 1 to 255.

REDIRECT.BAS [LISTING 3] demonstrates the technique and shows how to redirect PRINT output with simple assignment statements to variables BUF-PRT, BUFSCR, and BUFOUT, which also help make the code easy to read. Best of all, I can now print anything I can display without editing a single PRINT or LPRINT statement.

New... SuperProject Software What The Experts Have To Say:

*"Just Released for OS/2,
SuperProject Expert/2"*

Aerospace: "SuperProject is the best. Earned Value Reporting and Work Breakdown Summarization give me complete project control and the graphics make impressive presentations." Barry Feeley, Technical Manager, Ford Aerospace.

Construction: "The familiar SuperCalc® and 1-2-3 menu system makes it really easy to learn and use. It handles multiple projects, networking and flexible

report writing. The multiple resource calendars and histograms manage resources very efficiently." Ted Ritter, CEO, O'Connor Construction Co.

Data Processing: "The Outliner allows me to quickly sketch critical schedules from the top down. Expert is way ahead of the pack." D.W. Nesper, Regional Consulting Manager, Wang Labs.

The SuperProject® Family—Plus, Expert and Expert/2—is the most advanced PC project management software available. The smallest to the largest and most complex projects imaginable are easily handled thanks to its virtual memory management skills.

Newly released SuperProject Expert/2 running under OS/2, gives you true multitasking. For example, this enables you to enter data in the foreground while outputting a report in the background.

And only Computer Associates gives you PC and mainframe project management. Develop your project planning on a PC and then upload to a mainframe with CA-PLANLINKS™. You can then consolidate that project with others via CA-TELLAPLAN™ and take advantage of its resource pooling and presentation graphics.

alyst, and *AsmFlow*. These programming tools provide a battery of acid tests to analyze, profile, and document my source code in ways I've never been able to accomplish before.

If programming is an art, *PC-Metric* is a state-of-the-art critic. I use the Pascal and C versions, but COBOL, Modula 2, and FORTRAN packages are also available. Working with most modern compilers, *PC-Metric* reads a source-code text file and applies scientific formulas to a program's logic.

As a test, I fed *PC-Metric* a 1700-line module from my Turbo Pascal data base system. About 30 seconds later, on a 16-MHz ALR 386/2, I received two reports: a chart of statistics and a text file advising me whether each procedure and function falls within recognized standards of excellence.

The statistics include: total and unique operators and operands, length versus predicted length, purity ratio, volume, effort, cyclomatic complexity, esti-

mated errors, and others. Obtaining these values is the easy part. Understanding how to apply the evaluations requires a careful reading of the tutorial, which explains the theory behind each variable. A bibliography lists related books and articles. If I can ever find the time, I'd love to read them all.

For immediate help in using *PC-Metric* statistics, a supplied utility converts report files to comma-delimited ASCII text for loading into *dBASE*, *1-2-3*, or *Quattro*. After loading my test data, I ran an included macro to graph the results in pie and bar charts. Immediately I spotted a procedure that was doing more than its fair share of the work and made a note to divide the code into several smaller modules. Perhaps I could have drawn this conclusion directly from the program text, but the graph grabbed my attention and gave me a new way to evaluate my work.

The One Scanner That Takes Your Jobs From Start To Finish.

Microtek's MSF-300Q Gray-Scale Scanner

Now, instead of pasting up images or sending photos out to be halftoned, the versatile Microtek MSF-300Q Gray-Scale Scanner lets you complete your documents right at your desk.

Because many of your jobs may require revisions, you can create proofs using the MSF-300Q in its single bit-per-pixel mode. Scan charts, logos and photos quickly in up to 64 shades of gray, without taking up a lot of disk space. The MSF-300Q's quick and accurate OCR capability makes it easy to add text to your document as well. Now you get clear, crisp proofs from your laser printer at 300 dpi for routing and approval. In most cases these high quality results will be perfect for your everyday desktop publications.

When you need sharper, higher-resolution images, use the MSF-300Q in its multi bit-per-pixel gray-scale mode. Create final, "camera-ready" artwork with photos in place in up to 64 shades of gray. Scale your images up or down, or enhance them by using sophisticated gray-scale graphics editing software programs. When you're ready to print, the MSF-300Q can present a PostScript® equipped phototypesetter with enough information to produce "magazine-quality" halftones at 150, 175 and even 200-line screens.

Find out how to equip your Macintosh™, IBM® PC or PS/2™ with an MSF-300Q Gray-Scale Scanner. Call (213) 321-2121 or 800-654-4160 for the name of your local authorized Microtek dealer.

Mitch Marshall, President & Founder

M.M. Inc., a rapidly expanding company, is comprised of extremely talented and dynamic people. Over the next 3 years, sales are projected to triple due to our accurate foresight concerning our customers' needs (see chart below). To maintain this present level of growth we rely on you — our new employees, to provide us with the insight, and direction to meet the constant challenges of our business.

—Mitch Marshall

NEW EMPLOYEE MANUAL

Thanks Everyone. Looks Great! -SE

Mitch Marshall, President & Founder

Our History

Back in 1968, in a small garage outside Bakersfield, California, Marshall Manufacturing was formed. Mitch Marshall perceived a growing market demand for electronic component boards for the burgeoning electronics and computer field. His perception proved right on target. Marshall Manufacturing, Inc., began production with a lean staff of 12. Today, with plants throughout North America and Europe, M.M. Inc. is the leader in providing hardware for the computer industry. As sales continue to grow, we will reach (cont. pg.4)

1989	150
1990	200
1991	300

Circle 110 on reader service card

PC-Metric statistics offer other practical applications that may not be obvious. For example, instead of bidding a source-code maintenance job by the line, as many consultants do, you could run a 10,000-line C program through *PC-Metric* and calculate your fee based on the program's complexity.

PC-Metric is also useful in allocating testing time. I can quickly identify the more complex and error-prone modules in a program and concentrate my testing there, on the theory that bugs are more likely to show up in the trickier sections.

Another analytical tool, *Turbo Analyst 4.0*, is strictly for Turbo Pascal programmers. Kim Kokkonen of TurboPower Software isn't charging enough for this wonderful set of source-code tools. On four disks are two execution profilers, a program structure analyzer, a program lister, and a Pascal formatter, which can stylize even the messiest source-code jumble. In addition to a few other goodies, most of the source code is included. (The missing text is available in other products from the same company.)

Of all the tools in the *Turbo Analyst*, the most useful in my work are the two execution profilers. In fact, after trying them I abandoned a similar profiler I was planning to write. I know when I've been beaten.

A profiler can help inject extra speed into a program. The profiling software sits in memory while your program runs. After you quit the program, the profiler reports how much time was spent executing various sections

of code, identifying the most heavily traveled paths. Because most programs spend about 90 percent of the time in only 10 percent of the code, optimizing the time-critical sections in superfast assembly language often generates nearly as much speed as you could expect from rewriting the entire program. A good profiler can pay for itself on first use.

In addition to the profilers, the *Turbo Analyst's* Pascal structure analyzer locates duplicate identifiers, prints a procedure hierarchy chart and index, warns about unused symbols, and reports on possible side effects. (Side effects can occur when functions change global variables, a poor practice and a prime source of bugs.)

For assembly language programming, I came across another analytical tool, *AsmFlow*, a program that deserves better exposure. *AsmFlow* reads Assembler source code, calculates CPU timings (invaluable for optimizing code), displays and prints flow charts, and summarizes stack usage, registers, and unused external symbols.

A unique feature marks the closest instruction affecting a conditional jump. If you've ever used the wrong jump instruction, accidentally testing the overflow instead of the carry flag, for example, you'll appreciate this feature.

At the touch of a few keys, *AsmFlow* can also generate a list of procedures called by other procedures. Revising such "called-by" lists at the top of each module is one of those necessary assembly language documentation chores that I loathe doing by hand.

After years of testing, analyzing, and documenting my source

code the hard way, I now have the software tools I need to put my programs to the test. *PC-Metric*, *Turbo Analyst*, and *AsmFlow* are on my hard disk to stay. —Tom Swan

Born to run.

Most computers struggle to develop a talent for music. One was born with it:

The Yamaha® C1 Music Computer.

It's all wired for MIDI—with two INs, one THRU and eight OUTs. It even knows SMPTE, IN and OUT.

The C1 has a separate internal timer devoted to music applications. Keys conveniently marked with music symbols. And two programmable sliders, for greater MIDI control.

Of course, the C1 talks business as well as it does music. It's IBM-compatible, with a 286 processor and a full megabyte of memory (with room for 1.5MB more). Giving you access to thousands of the most advanced MS-DOS programs.

The C1 gives you access to thousands of programs for music and business—with a high-resolution 640x400 screen.

Choose from two models: one with a pair of 3.5" disk drives, another with a single drive and built-in 20MB hard disk.

Either way, it can easily travel from stage to studio to office to living room. And it grows—with ports for monitor, modem, printer, mouse, even Toshiba-style expansion devices.

So whether you are sequencing, designing new sounds or simply trying to keep track of your vast wealth, call 800-333-4442 for your nearest authorized Yamaha C1 dealer.

And take a screen test. Just don't be surprised by its special talent. After all, it's the product of a very **YAMAHA®**

Yamaha Music Corporation, USA, Digital Musical Instrument Division, P.O. Box 6600, Buena Park, CA 90622.
In Canada: Yamaha Canada Music Ltd., 135 Milner Avenue, Scarborough, Ontario M1S3R1.

C1 for the road. It even comes with its own carrying case.

The Catacombs of OS/2

OS/2 achieves its multitasking might through a grid of back routes and pathways.

Here's a short course on the rules of the road.

When all is said and done, OS/2 is about one thing: multitasking. Its heralded attributes—a vast 16MB of memory-address space and the ability to tap 286 hardware-protected memory—are simply means to that end.

In good time OS/2 will transform the PC into a host for a suite of full-fledged applications, from heavyweight spreadsheets and data managers to lighter-weight utility software, such as to-do lists and time managers.

But OS/2 is hardly the first product capable of running more than one program at a time. DOS-based operating environments like *Windows 2.0*, *Windows/386*, Quarterdeck's *Desqview*, and Tandy's *DeskMate* can legitimately juggle several applications at once.

The OS/2 advantage is true preemptive multitasking. That is, OS/2 permits numerous properly written applications to reside (and operate) safely within the machine while each appears to be living solo.

Don't be fooled by OS/2's "single user" status; as befits a minicomputer-style operating system, OS/2 is a master at communication—it's simply negotiating tasks rather than users.

OS/2's internal tricks and techniques may be invisible to you, but they won't be to your

OS/2 application. Under OS/2, that application will intrinsically be more capable, more communicative, and more respectful of coresident applications than its DOS predecessor.

Raising the Flag

OS/2's sophisticated internal techniques, collectively called interprocess communications (IPC), make the multitasking wheels spin while they ensure data integrity. The IPC storehouse includes shared memory, semaphores, pipes, queues, and a *Windows* technique called dynamic data exchange (DDE).

Whenever multiple programs or tasks within one program share the same information, they must coordinate data access. Under OS/2 the fundamental apparatus for sharing access to data is the semaphore. Semaphores provide a fast means of data locking, typically for in-memory data. They operate as flags or streetlights governing each application's access to shared data and limiting write access to files. Semaphores are necessary simply because altering shared data in a random way is ruinous; my edits to a file could well wipe out your edits.

By convention, each application must check the semaphore (*continues*)

**Robert
M. Carr**

before proceeding. In the event of a conflict, the application must wait before rechecking. Even with a green light, an application must be well behaved, notifying OS/2 when its work is completed. The semaphore can then change its value and grant access to another application.

Semaphores exist because data shared among multiple tasks is as prone to problems as data siphoned through multiple users. But data not shared in one location needn't be guarded, although it may need to be copied or sent from one process to another. That's where the other forms of interprocess communications come in.

Sharing Pipe Dreams

OS/2 generally assumes that applications must be carefully insulated from each other, and it relies on the 286's protected-mode hardware to physically prevent one application from accessing memory reserved for another. But OS/2 does provide a trapdoor for cooperative applications, where "trust" has been established. That escape hatch is termed *shared memory*.

With shared memory, an application requests that OS/2 temporarily drop the memory barriers for specified programs. Sharing memory makes sense for separate processes within an application, or for applications written to work together—particularly if they need to exchange large amounts of data while conserving RAM and maximizing speed.

You might regard pipes, queues, and DDE as OS/2's answer to the Postal Service. These three vehicles deliver one application's packet of data to another application.

Pipes come in two flavors: anonymous and named. Anonymous pipes are commonly used within one application for internal multitasking. Named pipes are connections that enable applications on separate PCs to communicate directly and exchange information, wherever they reside.

Pipes can be used as speedy conduits to link background processes—a technique sometimes called *pipelining*, because several pieces of code can work on the data in parallel. Pipe data is stored only in RAM buffers, not on disk. Furthermore, pipe data can be accessed only in the order it is written in—on a first-in, first-out basis.

Named pipes follow the naming conventions of PC files: applications need only know a pipe's name to access it. When OS/2 does include named pipes, it will deliver messaging capabilities roughly equivalent to a post office that can address every letter itself. With such power, named pipes will most frequently be included in applications that provide a service to a number of clients simultaneously—mail and data base servers, for example.

Like named pipes, queues provide messaging communications between applications. Unlike named pipes, queues use shared memory within a single PC to communicate between applications. Message passing is quick because messages need not be copied, but queues operate only within one PC, implementing hot link relationships.

One if by Land, Two if by DDE

These messaging techniques are included within OS/2 or will be in due course. But once a message is passed from one application to another, how does the

program decipher it? How does a program determine whether the corresponding application is requesting data or sending it? And in what format?

OS/2 itself doesn't provide the answers, but the Presentation Manager does, thanks to DDE. DDE is not a delivery technique but a formatting and writing convention that describes the layout and meaning of messages passed via pipes and queues.

DDE enables an application to inform coresident applications of data changes. The classic example of DDE in action involves the receipt and dissemination of stock quotes among a communications program like *Lotus Signal*, a spreadsheet, and a market analysis package.

It's clear that OS/2 and the Presentation Manager offer an array of technologies that enable applications to communicate well beyond the scope of DOS 3.xx or any DOS-based environment. Although the software development community will need time to fully probe these capabilities, users will emerge the clear winners. We'll be able to follow building-block strategies, assembling software suites in which the whole far exceeds the sum of the parts.

OS/2's rich IPC techniques alone endow OS/2 applications with functionality you can be sure that canny developers will exploit. Such promise suggests that the transition to OS/2 may be surprisingly painless—perhaps even pleasant. ●

Call for Nominations

PURPOSE

The Andrew Fluegelman Award is given annually to encourage personal computer software excellence and to recognize a software programmer or team of programmers. We are looking for people who have made a substantial, innovative contribution to the personal computer community in commercial, shareware, or public-domain software.

The award was established in 1986 by PCW Communications to commemorate Fluegelman's contributions to the software field. Fluegelman developed PC-Talk, the first easy-to-use and powerful communications program for the IBM PC. His concept of freeware remains one of the most innovative means of sharing and marketing software. Fluegelman died in July 1985, and a fund was established in his name. The annual award, sponsored by PCW Communications and the Software Publishers Association, is made possible through the Andrew Fluegelman Fund.

ELIGIBILITY

Any commercial, shareware, or public-domain personal computer software—including utilities, applications, and languages—developed by an individual or a team is eligible. The program must have been released between January 1, 1985, and December 31, 1988. Nominations can be submitted by anyone who did not participate in the software's development. Companies are encouraged to submit nominations for software that they market; but only individuals, not companies, are to be nominated.

JUDGING

Each program will be evaluated according to the following criteria:

- *It advances the state of the art of personal computing.
- *It manifests innovation in concept and design.
- *It demonstrates orientation to personal computer users.

SELECTION OF WINNERS

The award recipient is selected in a two-step procedure. First, an independent screening committee will review nominations and select the finalists.

Second, a panel of judges will evaluate the work of the finalists. From these, an award recipient will be selected.

PROGRAM COPIES

Finalists will be asked to submit six copies of their program for the judges' evaluation. These will be returned after judging. Please do not send programs until you are notified that you are a finalist.

PRIZE

The award winner will receive \$5000 and a commemorative plaque. The award will be presented at the Software Publishers Association annual awards dinner in March 1989.

1989 Andrew Fluegelman Award Nomination Form. Please type your entries; no handwritten entries will be accepted. Attach additional pages with a brief description of program (100 words or less) and the reason for your nomination.

DEADLINE

Nomination entries must be postmarked no later than February 1, 1989. Mail six completed copies of this nomination form to:
Andrew Fluegelman Award
PCW Communications, Inc.
501 Second Street
San Francisco, CA 94107
For further information, please call (415) 546-7722.

What's your time worth?

Don't waste time looking for, organizing, comparing and sorting your information. That's PackRat's job.

Introducing the Personal Information Manager that runs with Microsoft Windows®...

POLARIS PackRat[™]

PackRat is an exciting new software program designed for busy people. You know who you are — managers, salesmen, stockbrokers, planners, analysts, i.e., *Information Workers*.

Because you're a person who depends on information, PackRat's the tool for you. PackRat runs with Microsoft Windows, so it's easy to learn and easier to use. You enter all the little pieces of information that alone are just tidbits. Once entered, they can be viewed from many perspectives providing you a complete picture of usable information.

PackRat provides the information related to people, ideas, commitments, schedules, assignments, expenses, etc. And because the telephone is an integral part of your

world, PackRat provides extensive telephone information and dialing support. In addition, PackRat has a tickler message facility to remind you of important activities while in any Windows Application.

The result is that you save time. You're more productive. You display a level of confidence previously not attained. You contribute more, you're worth more. *So again, what's your time worth?* See your dealer or call Polaris Software at (800) 338-5943.

SOURCEBOOKS

Further explorations into personal computer technology

A CompuServe guru guides you through the on-line maze, and two specialists on productivity tell how to manage knowledge workers.

**Michael Harper
and
Marlene Nesary**

On-Line Savvy

Alfred Glossbrenner's Master Guide to CompuServe
Alfred Glossbrenner
Brady/Prentice Hall Press, New York,
1987
432 pages
\$19.95 softcover

Alfred Glossbrenner is a walking encyclopedia of PC communications know-how. His 12th book, *Master Guide to CompuServe*, provides a comprehensive survey of this granddaddy of general-interest information and communications services. Whatever your primary concern—investment information, games, electronic conferencing, research—the *Master Guide* can help you hack a path through CompuServe menus and commands.

Fully one-third of the *Master Guide* is devoted to accessing and using the wealth of business and financial information available on CompuServe, which Glossbrenner claims is second only to Dow Jones News/Retrieval in this realm. "There's so much valuable material scattered through the system," he writes, "that it's easy to miss out if you don't have a plan of attack." Gloss-

brenner has one, and he gives a hands-on demonstration of strategies for exploiting CompuServe's business news, information, expert advice, and tips.

His densely packed pages reveal lots of consumer savvy, too. For example, getting the name and address of a company through one CompuServe database, Disclosure II, will cost you \$2.30, but you can obtain it for a mere two bits using Standard & Poor's data base.

Retrieving information from this well-organized guide is often a delight. Glossbrenner's discussion of the on-line *Academic American Encyclopedia* notes that the service "is enormously popular among elementary and high school students....the AAE makes it easy to research a topic in the detail acceptable at the elementary and secondary level ...and to quote key passages without the need to retype anything."

Spend a little time reading Glossbrenner's book and you're likely to save big bucks on connect time. Browsing also has its rewards, since it points out services you may not be aware of. Whether you already subscribe to CompuServe or are just considering it, you'll appreciate Glossbrenner's inside tips.

Bossing Brains

Peopleware: Productive Projects and Teams

Tom DeMarco and Timothy Lister
Dorset House, New York, 1987

188 pages
\$23 softcover

If you hire people for their brains, you can't treat them like modular components and expect an able, creative crew to emerge. That's the basic message in *Peopleware: Productive Projects and Teams*, a cogent little book written by Tom DeMarco and Timothy Lister, two consultants whose specialty is "knowledge worker" productivity.

Between them the two authors have over 30 years' experience with such companies as American Express and Hewlett-Packard. They use this experience to describe the "puzzle of keeping good people," and the intriguing, sometimes exasperating process of team building.

DeMarco and Lister tell a subtle story to illustrate the all-important jelling process: Workers assigned to a new project are invited to a preproject get-together at the manager's home, where they wind up pitching in with everything from shopping to dishwashing at an apparently impromptu spaghetti dinner.

"Nobody takes charge.... There is some talk of making a clam sauce, and when nobody's opposed, two of your new mates begin to talk out the details.... Your boss gives no direction, but she pitches in to chop onions when someone suggests that's

what's needed.... Gradually a dinner comes together."

What does this laid-back style have to do with the bottom line? Everything, say DeMarco and Lister. "You have to look twice to see the manager's hand in any of this...but you've just had your first success as a group. Success breeds success, and productive harmony breeds more productive harmony."

Though a spaghetti dinner might not cost the company anything, some of DeMarco and Lister's recommendations will.

They've studied the correlations between productivity and environment for ten years, and make a strong case for large, quiet offices. "Police-mentality planners design workplaces the way they would design prisons: optimized for containment at minimal cost." This is false economy, argue the authors. "As long as workers are crowded into noisy, sterile, disruptive spaces, it's not worth improving anything *but* the workplace."

If your firm can't afford larger premises, at least it can ensure more worker privacy by providing "a quiet little cubbyhole with two large folding tables and a door that shuts," instead of an "EZ-Whammo Modular Cubicle with seventy-three plastic appurtenances." Quiet can be secured by deep-sixing the electronic paging system and doing something about the phones. (Their tip: stuff the bells with tissue.)

Peopleware is fun to read because the authors illustrate their analyses and solutions with war stories drawn from their consulting experience. But this well-researched book is also persuasive because its advice is backed up by firm scholarship. —M. H. (continues)

MOVE OVER I.B.M., MOVE OVER COMPAQ, THERE'S A NEW STAR ON THE HORIZON!

386 • Based • 25 MHz • VGA Video Card and VGA Monitor • 90 Megabyte (16MS) • 2 Meg RAM . . . Impressive? Yes. We call it the "HOTROD" and it means we plan to be ahead of the competition. **STAR** Computers are quality manufactured in the U.S.A. and offer outstanding features with exceptional value. Our new 286/24 MHz workhorse for example, which thinks faster than standard 386 based machines. And now you can purchase a **STAR** in one of several soft, designer colors, so your **STAR** will not only work great, but look great too!

If you're looking for value, performance, and even style in a personal computer, call **STAR** and let us perform for you.

BOOKS IN BRIEF

There's only one LaserJet bible, and now it's been updated. Written by Ted Nace and Michael Gardner, *LaserJet Unlimited, Edition II*, covers everything from LaserJet origin myths to running the LaserJet with a Mac. Along the way you'll learn how to speak in tongues (the arcane printer control language); compress print time using memory cards and PostScript controllers; find, download, and use fonts; and run the LaserJet effectively with the latest word processing, spreadsheet, database, and desktop publishing software. Make this bargain book your first LaserJet add-on. \$24.95, Peachpit Press, Berkeley, California, 1988; 512 pages, softcover.

Word guru Peter Rinearson has a new offering. A palm-size, action-oriented guide to version 4.0, *Microsoft Word for the IBM PC* is organized by task rather than by command or menu structure—a boon for those (not us, of course) who forget command names or the menu location of esoteric operations. Concise paragraphs explain tasks both simple and complex. You'll find useful directions for creating multiple columns, sorting paragraphs, merging master and data documents—even quitting *Word*. Especially handy are the appendix's short command summaries for entering and editing text and for moving around within a document. It's well worth the \$5.95. Microsoft Press, Redmond, Washington, 1988; 122 pages, softcover. —M. N. ●

Michael Harper teaches English at Scripps College in Claremont, California. Marlene Nesary is an assistant editor for PC World.

Help Larry Get "Lucky"

For all of you who helped Larry get "Lucky" in *Leisure Suit Larry's* original PC game, you're in for a real surprise with his new worldwide adventure. For those who have not met Larry — hang on!

We meet Larry in L.A., left penniless (except for a torn one dollar bill) by his latest fling. Of course, Larry is nobody's fool. He immediately takes his last remaining \$1 bill and plays the state lottery. Luck is with Larry — he wins and is invited to participate in the "Big Spin". Larry wins millions and is immediately a very popular "Dude".

But wait! Behind this beach blanket of fun and frivolity lies a ballyhoo of espionage and intrigue. With KGB agents, the Hairy Krishnas, and dozens of "available" women on his tail, Larry's good fortune could vanish quicker than his hairline!!

Dance, party, and chase the Babes — that's Larry's motto!! But with all the swinging times you'll have, *Leisure Suit Larry II* is also a very challenging adventure game that will test your street smarts to the fullest. Larry is not exactly the most polished Playboy around. After all, who else but Larry would wear tennis shoes with his polyester suit, cut his hair so short that you see his "whitewalls", or tell the girls that his new colored contacts are the "real thing" — let's all help Larry!

Incredible 3-D graphics and lifelike animated characters provide hours of adult entertainment. Requires CGA, VGA, EGA, or Hercules graphics card. Available for IBM PC (or compatible) only.

Please include \$4.95 for Shipping/Insurance. 30 day money-back guarantee. Credit card holders may call our toll-free number to order. Or mail your check to the address below. CA residents add 6% sales tax.

C-D
\$1695
(Sugg. ret. \$2295)

A-D
\$2295
(Sugg. ret. \$2695)

A-E
\$2695
(Sugg. ret. \$2995)

Features that say value...

Economical: \$1,000 less than other large format plotters.

Compatible: Operates with all popular CAD software supporting DM/PL™.

Multiple Media Sizes as small as 8 1/2" x 11" or as large as 36" x 48" eliminates the need for a second plotter.

Practical speed you can really use: 10" per second assures good drawing throughput while optimizing the speed at which most plotter pens can draw without skipping.

Repeatability and Resolution: .004 assures quality suitable for the most demanding applications including PCB artwork.

Vacuum Paper Hold Down guarantees perfect registration.

CALL NOW AND WE'LL SEND YOU A FREE SAMPLE PLOT.

Communications

Bridges the Lap Gap

Hooker is a powerful and easy to use connectivity tool that hooks any two IBM PC compatibles together and transfer files at amazing speeds. Serial transfers exceed 115,000 baud, parallel is even faster, and nothing could be easier to use. You will be transferring files seconds after opening the package.

Hooker comes with everything you need. Software on 5 1/4" and 3 1/2" disks, a Quick start user guide and a universal cable are all included. You supply the computers, and Hooker will do the rest.

Among its many standard

features are Hooker DOS and Hooker Edit. Hooker DOS gives you instant access to the most

commonly used commands, taking the drudgery out of using DOS. Hooker Edit includes many advanced features found in leading word processors.

For an additional \$10 our new Hooker Plus version includes Hooker Phone which gives you complete telecommunication power. For a limited time only Amica is

offering Hooker for the introductory price of \$59.95, with a 30-day money back guarantee.

Hooker at a Glance

- Connect any two PCs
- Serial and parallel
- Exceed 115,000 baud
- Two way transfers
- DOS organizer
- Full text editing
- Talk mode
- Hayes modem support
- Print facilities
- Universal cable
- 5 1/4 and 3 1/2 disks
- PS/2 ready

A Data Entry System Perfect Enough to Satisfy Type "A" Personalities.

If you demand the same accuracy, perfection, and hard work from your data entry software as you do from yourself, then *RODE/PC* is your type of product. *RODE/PC* is a type "A" solution for people who insist on easy application design, powerful validation, two-pass and trail verify modes, exceptional conditional processing, full record output control, complete system management facilities, data security and much more. *RODE/PC* is an extraordinary product to meet extraordinary requirements.

Like *RODE/PC*, your hardware must be right for today and ready for tomorrow. *DPX* recommends *RODE/PC* with the IBM® Personal System/2® products. They feature an integrated system design and the quality and dependability you expect from IBM. Along with the IBM OS/2®, the Models 50, 60, 70, and 80 offer the exclusive "IBM Micro Channel"™ Architecture.

See for yourself why 6 of the 10 largest companies and thousands of others in the US have selected *RODE/PC* as the ultimate PC data entry solution. Our customers say "*RODE/PC* is a beautiful product, designed by people who clearly understand the market." Call us to discuss your data entry plans and ask about our evaluation program.

Security

HANDS OFF THE PROGRAM® PC SECURITY

HANDS OFF THE PROGRAM is an all software, privilege based, system security utility that prevents unauthorized access of your PC's subdirectories, files and disk drives.

HANDS OFF THE PROGRAM provides a sophisticated technique to separate up to 64 users of a PC, by privilege, into their own separate areas on the hard disk. Users may access only their own areas and any other area protected with a lower privilege.

HANDS OFF THE PROGRAM protects files on your hard disk by preventing unauthorized users from modifying the DOS file attributes (Read Only, Hidden, System). For example, use the READ ONLY attribute to prevent virus programs from invading your system.

HANDS OFF THE PROGRAM restricts access to your hard disk via "disk locking". A "locked" hard disk may not be booted, accessed by applications software or formatted via the DOS FORMAT command until it is "unlocked".

HANDS OFF THE PROGRAM incorporates advanced security techniques on PC's running PC-DOS V3.0 or higher. The DOS FORMAT of Drive C is prevented while the PC is in use, the security manager is protected against Control Break and a boot from floppy results in the automatic locking of Drive C.

HANDS OFF THE PROGRAM also provides:

- Disk Encryption
- User Access Reporting
- Stops Common Viruses
- Mailbox
- Read Only and Execute Only privileges by user
- Auto Installation

NEW ANNOUNCED
Meet you in the
COMDEX/Fall '88 CASHMAN FIELD CENTER
Booth A442

GUIS

PERSONAL FAX

US\$1,195

4 functions in 1 unit

You surely have a dream to hold every single message around the world to catch up with this high-tech era. In order to get closer to your friends, clients, and lover, you must own her—

GUIS Personal Fax:

She never strikes, never stops.

She never sleeps, never spys.

She performs as:

CCITT G3/G2, 9600 bps; Auto Fallback

Hand free speed dialing for easily sending

Auto redial for efficiency increasing

32 one-touch dialing for friendly using

Auto power off for cost saving

Normal/Fine mode for best quality

Text/Halftone to secure the colorful result

LCD for clear display of all essential information.

She is your secretary to auto answer your incoming fax and telephone call.

She is a recorder to record messages, when you are away.

She is a voice-reminder to leave message to your partners and colleagues.

And she is so fantastic, considerate and lovely that you can't miss her.

GUIS

A Little Giant in Telecommunications

Distributor

America is worth fighting for.

From the Atlantic to the Pacific, the Arctic to the Gulf, our land is constantly under attack from the polluters and despoilers.

That's why Sierra Club Legal Defense Fund attorneys are pursuing dozens of cases nationwide in defense of wildlife, rare habitats, the air we breathe and the water we drink.

Most of our support comes from individual contributors like you. Please help us win. Because America is worth fighting for.

I enclose my tax-deductible contribution to save what I love most about America. Send me your quarterly newsletters in return.

Management Reading List: Wall Street Journal, Fortune and PC World.

Personal computers are common in today's business world. Using them effectively is not. Few managers really know how to apply their PC's to full advantage in handling their job responsibilities.

PC World can help you find practical solutions to everyday business problems. We provide in-depth product reviews. Detailed skills building sections. First-hand looks at new technology. All the "bottom-line" information you need to make effective business decisions and give you the competitive edge. Shouldn't you be subscribing to PC World?

PC WORLD

For the business of computing.

Buy with

Confidence

In an effort to make your telephone purchasing a more successful and pleasurable activity, The Microcomputer Marketing Council of the Direct Marketing Association, Inc. offers this advice, "A knowledgeable buyer will be a successful buyer." These are specific facts you should know about the prospective seller before placing an order:

Ask These Important Questions

- How long has the company been in business?
- Does the company offer technical assistance?
- Is there a service facility?
- Are manufacturer's warranties handled through the company?
- Does the seller have formal return and refund policies?
- Is there an additional charge for use of credit cards?
- Are credit card charges held until time of shipment?
- What are shipping costs for items ordered?

Reputable computer dealers will answer all these questions to your satisfaction. Don't settle for less when buying your computer hardware, software, peripherals and supplies.

Purchasing Guidelines

- State as completely and accurately as you can what merchandise you want including brand name, model number, catalog number.
- Establish that the item is in stock and confirm shipping date.
- Confirm that the price is as advertised.
- Obtain an order number and identification of the sales representative.
- Make a record of your order, noting exact price including shipping, date of order, promised shipping date and order number.

If you ever have a problem, remember to deal first with the seller. If you cannot resolve the problem, write to MAIL ORDER ACTION LINE, c/o DMA, 6 E. 43rd St., New York, NY 10017.

ALL TOSHIBA AT LOWEST EVER DISCOUNT PRICES

TOSHIBA has a portable for every application. From the PC-compatible T1000 to the AT power of the T3100, Toshiba has the perfect laptop for you.

T1000

- 512K memory standard
- One 3.5" 720KB floppy
- Sharp clear supertwist LCD display (640x200)
- MS-DOS 2.11 in RAM
- Options include numeric keypad, 1200 bps Hayes compatible modem, memory expansion card.

T1200

- 1 MB memory standard
- 9.54 or 4.77 MHz operating speed
- One 3.5" 720 KB floppy, one 20 MB hard drive
- Sharp clear supertwist LCD display (640x200)
- RGB color and monochrome monitor connector
- Parallel, serial, and floppy drive port
- Full-size 82-key keyboard
- MS-DOS and SideKick

T3100

- 640KB memory standard—expandable to 2.6MB
- One 3.5" floppy, one hard drive
- High-resolution gas plasma display (640x400)
- Parallel, serial, and external floppy drive ports
- RGB color monitor connector
- Full-size 81-key keyboard with a big-machine feel.
- MS-Dos 3.2 and Basic

T3200

- 1 MB memory standard expandable to 4 MB
- 80286 CPU running at 12 MHz
- One 3-1/2" floppy, one 40 MB hard drive
- High resolution gas plasma display
- Parallel, serial and external floppy drive ports
- EGA color monitor connector
- Full function 85-key keyboard with port for 101-key keyboard
- MS-DOS 3.2

T5100

- 2 MB memory standard expandable to 4 MB
- 80386 CPU running at 16 MHz
- One 3-1/2" floppy, one 40 MB hard drive
- High resolution gas plasma display
- Parallel, serial and external floppy drive ports
- EGA color monitor connector
- Full function 82-key keyboard with port for 101-key keyboard
- MS-DOS 3.2

TOSHIBA family of 24-pin printers offers everything you need in dot-matrix printers: SPEED, QUALITY, VERSATILITY, COMPATIBILITY, EASE OF USE and AFFORDABILITY.

P321SL

- 216 cps Draft; 72 cps Letter Quality
- 180x360 Graphics Resolution
- IBM Pro-printer compatible
- Front Panel Controls
- Built-in Tractor Feed
- Fan-fold Bypass for single sheet handling w/autoload
- 32KB memory for Buffer or Downloadable Fonts
- Credit-card size snap in fonts

P321SLC

- **Full Color Capability**
- 216 cps Draft; 72 cps Letter Quality
- 180x360 Graphics Resolution
- IBM Pro-printer compatible
- Front Panel Controls

WordPerfect 5.0

\$215

List \$495

The most popular word processor is now even better than ever! Version 5.0 adds multiple font support, graphics integration, page preview and much more. WordPerfect 5.0, still retains its feel and ease of use that made it #1. Combine this with the best support in the industry and you can't lose.

SPECIALS

**TOSHIBA
T1000
\$749**

The Toshiba T1000 is the perfect second PC! It comes with 512K of ram, a 720K floppy drive, a supertwist LCD screen and MS-DOS in rom! All this in a battery-powered 7 pound package. A 768K ram card is just \$269 and can be set as base, expanded, or a non-volatile ram disk.

TOSHIBA Printers

These 24 pin models are loaded with features and are priced right. You can select multiple fonts and pitches right from the menu-driven front control panel. With paper parking, you can insert a single sheet without removing the continuous form paper. All this and multiple emulations with no dip switches.

COMPUTERS FROM IOWA SURPASS ALL OTHERS!

Gateway 2000 has unsurpassed systems, at incredible prices, backed with our excellent service. As noted by our customers:

"We are very happy that our system is at the top of the stack in both price and performance, but it is your courteous service that is uncontested by the competition."

— Pierce Haviland — Kingston, NY

"Overall, I feel that your product is outstanding and your service has been excellent."

— Eric Shogren — Stonington, CT

We look forward to doing business with you and establishing a long-term business relationship.

Are You Buying Your Computer Needs From a Pusher?

If you like buying at a discount, but hate dealing with the uninformed key pushers that take your orders, you're ready for an alternative source for quality computer components: the On-Line Store's **WHOLESALE + 7% PRICING POLICY**.

Offering more than just the best pricing, the well-informed sales staff at the On-Line Store knows what to ask to make sure the products meet your particular needs. *Key pushers? They just take orders.*

All of this—plus a 90 DAY LOWEST PRICE GUARANTEE to meet or beat any regularly advertised price. In addition, you'll receive unlimited access to their revolutionary multi-line BBS with literally hundreds of free programs—yours for the taking. PLUS you'll find a multitude of other specials too numerous to mention in this ad.

Many used color monitors, from	\$499.00

F&W has all the equipment and software you need for truly professional publishing, TV editing, and drafting. We offer substantial discounts on all brands of equipment. The workstation at left shows:

Houston Instrument DMP 62 plotter; size to 36"X48"	\$CALL
The monitor is a 19" Hitachi at	\$990.00
The digitizer is a Summagraphics 12" X 18" at	\$650.00
The console monitor is a Logitech Autosync at	\$540.00
The computer is a Wyse 386-based system at	\$CALL

Many other options are available:

CPU's with hard disks	\$999.00
Sweet-P plotter 7475A compatible 6-pen)	\$749.00
Digitizers from	\$340.00
Microtek MSF-300C Flatbed Scanner: 300dpi, 64 shades of gray	\$1560.00
Blaser 2: full range graphics laser printer; excellent blacks .	\$1650.00
Mural Flatbed Plotter; D-size plots at minimum cost	\$1795.00

Shown at right is our most exciting new product, the Vision Systems "Vision 16" frame grabber. This system captures TV images from a camera, VCR, or camcorder, and performs a nearly unlimited menu of manipulations. Its 512 X 480 pixel display, with 16 bits/pixel, gives extraordinary color rendition and clarity. There are conversion programs for VGA, CGA, EGA. "Vision 16" lists for \$1795: **CALL!**

State-Of-The-Art controller cards from F&W
ensure system compatibility:

Video 7 VGA, 640X480, 256 color	\$249.00
QDP 1000/16, 16 color, 1024X1024	\$649.00
QDP 256 color	\$1249.00
Imagraph 1280X1024, 1 Meg Videoram, 16 color . .	\$1200.00
QDP 2000, 2048X2048 virtual display	\$1995.00

Telecommunications Special! In our experience of upgrading our own telephone system, we discovered that we could procure the required equipment for 1/2 to 1/3 the price that Ma Bell or the leasing companies charge; installing it is as simple as adding a printer to your computer system. The Southwestern Bell Freedom Phone includes:

FS900 Telephone Station (shown at left)	\$132.00
FS246 Key Service Unit (shown at left) 2 lines, 4 phones . .	\$284.00
FS10 Cartridge adds 4 phones	\$41.00
FS20 Cartridge adds 2 lines	\$80.00
FS30 Cartridge (one required)	\$123.00

MONEYCOUNTS® 5.0

THE CLEAR MONEY MANAGEMENT/
ACCOUNTING CHOICE.

"I found MONEYCOUNTS to be better and easier to use than many other accounting programs costing nearly 10 times as much."
Tim Kahn, The Dairyman

"An exceptional value."
Tom Badgett, PC Clones

"I was impressed. It wins the cost-effective award."
John Dvorak, PC Magazine

"This is a great program: logical, easy to learn, and fast and easy to use."
Lloyd Edwards, Palmetto PC Chronicles

"MONEYCOUNTS could be one of the best software investments you ever make."
1001 News

JUDGE FOR YOURSELF.

If you're looking for a complete money management/accounting program that offers outstanding value, we invite you to examine the evidence on MONEYCOUNTS.® **It's the clear choice for home and business.**

MONEYCOUNTS is CPA designed, easy to use, menu-driven with on-line help, and requires no accounting experience. You'll appreciate the ease with which MONEYCOUNTS 5.0 ...

- Manages your cash, checking, savings, & credit cards
- Prepares your budget
- Balances your checkbook
- Prints 5 types of financial statements (including net worth)
- Prints 6 types of inquiry reports
- Prints any type of pin-feed check & updates your records automatically
- Prints general ledger & accountant's trial balance
- Handles up to 999 accounts & 100,000 transactions a year with its fast financial data base
- Estimates your 1988 personal income tax
- Analyzes financing options & savings programs — computes interest rates & loan payments — prints amortization and accumulation schedules
- Manages mail lists — zip and alpha sorts — prints labels and index cards
- Displays and prints three-dimensional graphics — works with monochrome or color monitors
- Provides password protection, fiscal year support, pop-up notepad, and much more!

Hard to believe the low price? Don't worry! There's no catch. MONEYCOUNTS has a proven track record, has been on the market over four years, and is continuously receiving rave reviews. If you're not 100% satisfied, return MONEYCOUNTS within 30 days for a full refund (excluding shipping). Over 50,000 users have decided in favor of MONEYCOUNTS! Order today and judge for yourself.

MEMORY LOSS?

Don't feel like the Lone Ranger... we are also suffering from loss of memory. ACP sells more Memory Upgrade IC's than other mail order supplier...But!...the present shortage is driving us up a wall! We can't get them at the right price, but we are getting them. PLEASE BEAR WITH US...as the market price comes down, so will our price!
Selling Chips? Call us, we're buying.

New! RAY-O-VAC®

America's choice and **Arlington Computer** Products choice is **EPSON®**

It's not hard to understand why. Care in design, engineering and manufacturing have made Epson an industry leader and the industry standard. And to back their reputation, a one year warranty stands behind every Epson product.

Arlington Computer Products is an authorized Epson® dealer. Please call for immediate delivery at very competitive prices.

Epson's high-speed FX-850 dot-matrix computer printer is equipped with outstanding performance features.

- Narrow-carriage 9-pin, dot-matrix printer.
- SmartPark™, a unique Epson paper-handling innovation, lets you switch from fanfold to single sheets or envelopes without removing hardware or paper.
- With a standard push feed tractor and single sheet friction feed, the FX-850 can handle virtually any type of paper as well as envelopes.
- Exclusive SelectType front control panel puts popular printer features and SmartPark operations at your fingertips.
- The FX-850 prints 264 characters per second (CPS) in high-speed draft mode (12 CPI); 54 CPS in Near Letter Quality mode (12 CPI).
- Insulated for quiet operation.
- Optional cut sheet feeder and pull tractor are available.
- Backed by Epson's one year limited warranty.

Epson's high-speed FX-1050 dot-matrix computer printer is equipped with outstanding performance features.

- Wide-carriage 9-pin, dot-matrix printer.
- SmartPark™, a unique Epson paper-handling innovation, lets you switch from fanfold to single sheets or envelopes without removing hardware or paper.
- With a standard push feed tractor and single sheet friction feed, the FX-1050 can handle virtually any type of paper as well as envelopes.
- Exclusive SelectType front control panel puts popular printer features and SmartPark operations at your fingertips.
- The FX-1050 prints 264 characters per second (CPS) in high-speed draft mode (12 CPI); 54 CPS in Near Letter Quality mode (12 CPI).
- Insulated for quiet operation.
- Optional cut sheet feeder and pull tractor are available.
- Backed by Epson's one year limited warranty.

Epson's LQ-500 is a high-resolution, Letter Quality computer printer with outstanding performance features and remarkable value.

- Epson's 24-pin, dot-matrix technology creates true letter quality characters and high-resolution graphics
- Prints 180 characters per second (CPS) in draft mode; 60 CPS in letter quality (12 CPI)
- Automatic single sheet loading, standard pull tractor and friction feed for versatile paper handling
- Exclusive SelectType front control panel offers quick, easy selection of popular types, fonts and pitch
- Two resident, letter quality fonts — Roman and Sans Serif
- New "shadow" and "outline" print modes for use with desktop publishing applications
- Optional LQ printer software for Microsoft® Windows
- Optional single-bin cut sheet feeder
- One year limited warranty

The standard width LQ-850 is a high-resolution, Letter Quality computer printer with outstanding performance features.

- Epson's 24-pin, dot-matrix technology creates true letter quality characters
- SmartPark™, Epson's unique paper handling feature, lets you change from fanfold paper to single cut sheet paper or envelopes without removing the tractor hardware or paper
- 264 Characters per second in the high-speed draft mode delivers outstanding productivity
- 88 Characters per second in Letter Quality mode for enhanced, high-resolution characters
- In draft mode or letter quality mode, the LQ-850 runs at a surprisingly quiet 55 dB noise level
- Exclusive SelectType front control panel offers quick, easy selection of popular types, fonts and pitch
- The LQ-850 is backed by Epson's one year limited warranty

The wide carriage LQ-1050 is a high-resolution, Letter Quality computer printer with outstanding performance features.

- Epson's 24-pin, dot-matrix technology creates true letter quality characters
- SmartPark™, Epson's unique paper handling feature, lets you change from fanfold paper to single cut sheet paper or envelopes without removing the tractor hardware or paper
- 264 Characters per second in the high-speed draft mode delivers outstanding productivity
- 88 Characters per second in Letter Quality mode for enhanced, high-resolution characters
- In draft mode or letter quality mode, the LQ-1050 runs at a surprisingly quiet 55 dB noise level
- Exclusive SelectType front control panel offers quick, easy selection of popular types, fonts and pitch
- The LQ-1050 is backed by Epson's one year limited warranty

Epson's advanced LQ-2550 is a powerful and versatile printer delivering superior print quality and paper-handling performance over a full range of business printing needs.

- 24-Pin technology creates superior Letter Quality characters and high-resolution graphics up to 360 dpi.

- 7-Color printing capability is standard.
- Epson's exclusive SmartPark™ lets you change from fanfold to cut sheet paper or envelopes without removing hardware or paper. Features top-of-form micro-adjustment and short form tear-off.
- Exclusive LCD SelectType front control panel for easy selection of pre-sets, fonts and printer functions.
- 133 Characters per second print speed in Letter Quality mode (12 CPI).
- 400 Characters per second print speed in draft mode (12 CPI).
- Epson LQ ESC/P™ assures software compatibility
- Insulated for quiet operation.
- Options include dual-bin cut sheet feeder, pull tractor and 32K buffer
- Backed by Epson's one year limited warranty

Lyc Computer

Marketing & Consultants

Air orders processed within 24 hours.

Lyc Means Total Service.

Mark "Mac" Bowser, Sales Manager

I would personally like to thank all of our past customers for helping to make Lyc Computer one of the largest mail order companies and a leader in the industry. Also, I would like to extend my personal invitation to all computer enthusiasts who have not experienced the services that we provide. Please call our trained sales staff at our toll-free number to inquire about our diverse product line and weekly specials.

First and foremost our philosophy is to keep abreast of the changing market so that we can provide you with not only factory-fresh merchandise but also the newest models offered by the manufacturers at the absolute best possible prices. We offer the widest selection of computer hardware, software and accessories.

Feel free to call Lyc if you want to know more about a particular item. I can't stress enough that our toll-free number is not just for orders. Many companies have a toll-free number for ordering, but if you just want to ask a question about a product, you have to make a toll call. Not at Lyc. Our trained sales staff is knowledgeable about all the products we stock and is happy to answer any questions you may have. We will do our best to make sure that the product you select will fit your application. We also have Saturday hours - one more reason to call us for all your computer needs.

Once you've placed your order with Lyc, we don't forget about you. Our friendly, professional customer service representatives will find answers to your questions about the status of an order, warranties, product availability, or prices.

Lyc Computer stocks a multimillion dollar inventory of factory-fresh merchandise. Chances are we have exactly what you want right in our warehouse. And that means you'll get it fast. In fact, orders are normally shipped within 24 hours. Free shipping on prepaid orders over \$50, and there is no deposit required on C.O.D. orders. Air freight or UPS Blue/Red Label shipping is available, too. And all products carry the full manufacturer's warranties.

I can't see why anyone would shop anywhere else. Selection from our huge inventory, best price, service that can't be beat — we've got it all here at Lyc Computer.

Circle 270 on reader service card

Plain English, Please

Joan Hope

I belong to no PC user group, subscribe to no computer publications, and can never remember how to pronounce "DOS." I know how to turn on my PC, run my word processing program, make copies of my files, and turn off the PC. In other words, I am a typical PC user.

As a college English teacher and graduate student, I use my PC almost exclusively for word processing. It has changed my whole approach to writing and drastically improved the final product. But it saves me neither paper nor time, because I make many more drafts than I would using a typewriter and still make revisions in longhand.

The other academics and writers I know are no different. PCs have become as indispensable to us as our dictionaries, but since we use them for only a few specific tasks, there's no reason to keep up with PC technology, much less the latest jargon. We have a tough time getting along in a world of computer jocks who flash the latest buzzword like a membership badge. Computer product instructions (when there are any) are written for insiders.

The PC I bought two years ago came without assembly instructions. After putting all the components where I thought they belonged, I discovered that

I didn't know how to plug the thing in (yes, this is a true story). A friend—a Ph.D. candidate in computer science—helped me figure out that the power cord was missing. A simple parts list and assembly diagram would have saved me an hour of frustration. Fortunately, that same friend installed DOS and configured the system for me, a favor for which I am still grateful.

Now that I am familiar with the most common commands, my DOS user's guide serves as a handy reference. But it's obviously written for people who already know the answers. I can never find the solutions to my problems and invariably end up calling friends for help. As for my GW BASIC programmer's guide, I haven't gotten past that part of the introduction that reads, "GW BASIC ... provides sophisticated string handling, structured programming features, and improved graphics." I know what "improved graphics" means—I think.

My *WordStar Professional* manual is better, but even that has left me stranded a few times. For example, it explains how to protect and unprotect files using the opening menu, but on several occasions I've hit the wrong key and accidentally protected files while editing them. The manual doesn't tell me how

to undo the mistake while in edit mode, so I have no recourse but to exit my file and lose any changes I've made.

I suggest that computer vendors find a different kind of writer to prepare their instruction manuals. MicroPro says it chooses skilled writers who are also technically competent, but I say technical competence is a handicap. The ideal candidate is a good writer who knows little about computers and nothing about the product in question. We need documentation written by people who understand the common user's problems. Companies could simply make a technician available to answer the writer's questions while he or she focuses on translating computer gibberish into plain English. Graduate humanities programs are full of qualified candidates who could use the work. ●

Joan Hope is a doctoral candidate in English at Indiana University at Bloomington.

Have a different perspective? Write Dan Lavin, user ombudsman, PC World, 501 Second St., San Francisco, CA 94107.

When you got your PC, it was love at first sight. How did it ever come to this? It's taken over your entire desktop. Your screen has disappeared beneath a thick layer of dust. The noise from your printer is driving you crazy. You just can't go on like this...

KENSINGTON CONVENIENCE

Don't do anything rash. Kensington can put you and your PC back on good terms.

1. Our **Universal System Stand** gets your CPU off your desk and out of your way. Adjusts to fit any PC up to 6½" wide. \$29.95

2. Our anti-static **Dust Covers** protect your computer, monitor, and keyboard from dirt and dust. \$19.95

3. Our **Printer Muffler 80** and **Printer Muffler 132** (for 80 and 132 column dot-matrix printers) reduce printer noise by 75 to 85%! Only \$69.95 and \$89.95

4. Our **Printer Muffler Stand** raises your printer and Muffler 4" for handy paper storage. \$29.95

5. Our **Universal Copy Stand** puts your notes next to your screen, directly in your line of vision. Attaches to either side of any monitor. \$29.95

6. And our **Keyboard Slideaway** gives you the extra room you need for your keyboard. Slides under your PC when not in use. \$49.95

For a free brochure on our full line of PC accessories, call 800-535-4242, 212-475-5200, or write Kensington, 251 Park Ave. South, NY, NY 10010.

Announcing The Most Powerful Rampage® Ever.

RampagePlus From AST.

These days, to really get power, you've got to have a Rampage. RampagePlus from AST—the most powerful memory/multifunction boards you can buy.

With RampagePlus/MC for your IBM® PS/2™ Model 50/60, or RampagePlus 286 for your AT® or compatible, you can have: up to eight megabytes of memory. EMS 4.0 compatibility. OS/2™ compatibility. And, optional I/O piggyback modules. There's nothing like them anywhere.

By making the one simple decision to buy RampagePlus, you can postpone making a lot of other decisions. If you're asking yourself: Do I need the extra functionality of EMS 4.0? Should I plan on converting to OS/2? Can I get the same power from my AT compatible as I can with a PS/2? Will I need to save slots for input/output boards? RampagePlus takes care of it all.

Of course, you'll be going on a Rampage designed by AST. That makes your decision even easier. After all, year after year, we've sold more memory/multifunction boards than any other company. Great boards, like SixPakPlus® and Advantage®. And, after selling over three million boards, we're proud to say the RampagePlus boards are the best we've ever built.

	Computer	Memory	Hardware Software Compat- ibility	I O Piggy- back Modules (optional)
RampagePlus MC	PS 2 Model 50/60	up to 8 MB	EMS 4.0 EEMS EMS 3.2 OS/2	Serial/ Serial or Serial/ Parallel
RampagePlus 286	AT or Com- patible (XT form factor)	up to 8 MB	EMS 4.0 EEMS EMS 3.2 OS/2	Serial/ Serial or Serial/ Parallel

For one, they are the first memory boards to offer 100% EMS 4.0 compatibility. RampagePlus 286 has 12.5 MHz speed designed especially for fast AT compatibles, while RampagePlus/MC runs with zero wait-states to get the most out of your PS/2s. And, both RampagePlus boards include SuperPak™, AST's utility software programs.

Finally, there's one thing you'll find on a RampagePlus that you won't find on any other memory board, the AST name. And that means that you can make a safe decision and go on a Rampage, all at the same time. To find out how, call AST, **(714) 863-0181, Operator AA27**, or send us the coupon.
